Adolescence (adolescents) (Continued)
relationship, 849–850
transition, 849
Treatment Foster Care Oregon for Adolescents (TFCO-A), 542
violence
prognosis, longitudinal studies, 666
trauma, contributions, 667f
youth narcissism, 684
ADOS. See Autism Diagnostic Observation Schedule
Adrenocorticotrophic hormone (ACTH), 202, 521
release, 565, 1092
responses, elevation, 858
stimulation, 401
ADU. See Alcohol and drug use
Adult Attachment Interview (AAI), 251, 732
Reflective Functioning (RF) Scale, 742
Adulthood
binge drinking, growth curve trajectories, 899f
early adulthood, personality disorder (developmental period), 1065
late middle adulthood, longitudinal subtype typology/prospective trajectory class studies (parallelisms), 811f
later adulthood, personality development (developmental period), 1065–1066
Adult narcissism, 683–684
clinical observations, 686
diagnostic approaches, 685–686
empirical research, 686
manifestations, 685–687
social-personality research, 686–687
Adult-onset bipolar disorder, 905
Adult onset schizophrenia
academic performance/cognition, quality (problem), 964
antecedents, childhood trial, 960f
development, abnormality, 964
perinatal factors, 962–963
risk factors, 963
Adults
attachment styles, studies, 733
bipolar disorder, diagnosis, 901
depression
childhood trauma, relationship, 564
child maltreatment, effects (moderation), 479
depression, interpersonal theories, 293
narcissism, intrapersonal/interpersonal manifestations, 684
neurofunctional organization, observation, 126
OCD, meta-analyses, 329, 331
Adverse childhood experiences (ACE), factors, 482–483
Adverse Childhood Experiences Survey (ACES), 458
impact, 524
Adversity. See Early adversity
childhood adversity
Borderline Personality Disorder (BPD), relationship, 738–744
childhood schizophrenia, relationship, 964–965
effects, developmental psychopathology model, 557f
developmental adversity, 769–770
exposure, 283
genetic research, 525
neuroendocrine effects, 521–522
physical effects, 524–525
resiliencies, attention, 986–987
timing/duration, 526–527
Advertising, impact, 874
Affect differentiation, 464–466
Affect-drug association, specificity, 861–862
Affective content, cognitive content (comparison), 750
Affective empathy tasks, 756
Affective flattening, 955
Affective information, differential processing, 468
Affective knowledge, 750
Affective mentalizing, cognitive mentalizing (contrast), 750–752
Affective processes, 620–621
Affective processing abilities (development), child maltreatment (impact), 464
Affective psychosis (psychoses), 956–957
Affective reciprocity, 214
Affective stimuli, bottom-up salience (increase), 326
Affect-motivated drug use, risk, 858
Affect-regulatory processes, development, 730
aFMC. See Anterior frontomedial cortex
African American children, depression (prevention), 478
Agency for Healthcare Research and Quality, Effective Health Care Program, 444
Agentic goal orientation, 273
Aggression
development, 659
physical aggression, 343
predispositions, 262
proactive forms, motivations, 274
teacher ratings, 205
Aggressive behavior, hostile attribution bias (association), 343
AL. See Allostatic load
Alcohol
alcohol-nonspecific risk behavioral disinhibition, 798–807
alcohol-specific risk, 795
pathways, problem use/disorder course (heterogeneity), 809–810
alcohol-specific risk, emergence/course, 807–814
alcohol-specific vulnerabilities, 813
dependence, development, 843
eyar usage, impact, 823
involvement, risk (initiation), 807–809
products, manufacturer promotion efforts, 876
Alcohol and drug use (ADU), 662–663, 672
dependence (adolescence), self-organized peer groups/progressions, 663f
diagnostic criteria, 794–795
ecological conditions, 662
genetic vulnerability, 662
peer clustering, 663f
progression, adolescent friendship influence, 664f
sharing, 662
Alcoholism
comorbid alcoholisms, course, 812f
genetics, 814–818
primary alcoholisms, course, 812f
risk
hierarchical model, 798–807
probability, 798f
Alcohol use
cross-level developmental review, 793
developmental perspective, multilevel mechanistic structure, 801f
developmental progression, multilevel matrix, 797–798
epidemiology, 795–797
gene-environment (GxE) interplay, 816–817
general/specific environmental risk, 801–803
individual/developmental time, life-course trajectories, 799f
life-course trajectories, multigenerational linkage, 799f
past 30-day use, 797f
phenotypes, 815
prevalence rates, 795–796
risk
cross-level/multidomain mechanistic structure, 800f
variations, 798–807
Alcohol use disorder (AUD), 793
adaptation (permission), critical features (identification), 823
dependence, core neural model, 818
adolescence, course (dynamic changes), 820–822
brain, intermediate-level etiology, 818–822
course, 798–807
variations, 807–814
development, 848
developmental course, variations, 809–814
developmental progression, multilevel matrix, 797–798
diagnostic criteria, redefining, 795
genetics, 814–818
GxExD effects, prevention, 824
heterogeneity, 810–814
intermediate phenotypes, cross-level mechanistic structure, 822f
internalizing pathway, presence, 803–805
neural individual differences, genetics, 819–820
nonspecific risk, heterogeneity, 805–807
precursor, 803
problems, 814–818
rate, increase, 803
risk, 800
course, heterogeneity, 805–807
cross-level/multidomain mechanistic structure, 800f
structure, impact, 823
variations, 807–814
risk/adversity groups
externalizing symptoms, 805f
internalizing symptoms, 806f
symptomatology, 797
term, usage, 795
undercontrol, cross-level mechanistic structure, 822f
variance, 814
vulnerability, domains, 818–819
Aldehyde dehydrogenase (ALDH2) deficiency, 815
ALDH. See Acetaldehyde dehydrogenase
Alerting, 615
ALFF. See Amplitude of low frequency fluctuations
Alien-self parts, 731
Allostasis, 867
concepts, 480
Allostatic load (AL)
child maltreatment, relationship, 480–481
concepts, 480
mediators, 482
theory, 922
American Association on Mental Deficiency (AAMD), 7
American Association on Mental Retardation (AAMR), 5
American Psychiatric Association taxonomies, 835
Amour-propre, 681–682
Amplitude of low frequency fluctuations (ALFF), 925–926
Amygdala, 430
activation, 925
activity modulation (negative feedback), anterior cingulate-amygdala circuitry (impact), 1088f
autism spectrum disorder, relationship, 98
BOLD responses, 52
extended amygdala, 1090
function, 409f
increase, 405–406
overreactivity, implications, 1089
reactivity, increase, 1088
resting state functional brain connectivity, 486
volume
examination, studies (meta-analysis), 924
reduction, FMRF reduction (association), 70
volumetric/morphometry studies, 924
Anger
displays, 468
reduction, 347–348
rumination, 345–346
Angular gyrus, word/number involvement, 975
Anhedonia, 955
Animate action stage, understanding, 138
ANS. See Autonomic nervous system
ANT. See Attention network task
Anterior cingulate-amygdala circuitry, impact, 1088f
Anterior cingulate cortex (ACC)
brain circuitry disruptions, 83
myoinositol, trend, 928
Anterior frontomedial cortex (aFMC), 757
Anterior insula, activation, 288
Antipathy, 265
Antipsychotic drugs, usage, 984–986
Antipsychotic medication, usage, 1020–1021
Antisocial behavior, 254, 440, 592
adolescent violence, trauma (contributions), 667f
aggressive behavior, early development, 655f
antisocial development, 670f
childhood maltreatment levels, increase (effects), 1104f
child psychiatry/psychology, impact, 648–649
coercion/contagion dynamics, 652–654
coercive joining, violence (relationship), 665–668
development, 647
environments, effect (moderation), 650
developmental cascade model, parenting contributions/amplifying mechanisms, 652f
early childhood
parent-child interaction, state space grid, 655f
early childhood, family coercion, 654–657
ecology, 647, 650–651
emergence (middle childhood), peers (impact), 661f
etiology, 647
friendships, evocation, 652
friends, sexual selection, 659–662
substance use, 662–665
predispositions, 262
prevention, 647
research, future, 668–672
theory, intervention (relationship), 670–672
translational framework, 649–650
treatment, 647
violence progression, adolescent friendship influence, 666f
young adult rehabilitation, 670f
Antisocial personality disorder, 1051
Antisocial Process Screening Device (APSD), 694
narcissism subscale, utility, 694
antisocial tendencies, escalation, 665
Antisocial youth, ADHD, 627
Anxiety
anxiety-related behavior, increase, 1093f
attachment theory, application, 252–253
disorders, 293–294
ASD, relationship, 90–91
childhood schizophrenia, relationship, 959
elicitation, minimum threshold, 1085f
family theories, application, 260–261

Anxiety (Continued)
impact, 164, 167
impact (DBDs), 173–174
increase, 1084
index, 1091–1092
neurobiology, 1087
parenting theories, application, 260–261
peer ecology, application, 270–272
resolution, absence, 747
social engagement, typical/atypical patterns, 167–169
social motivation theories, 275
stress-based theories, application, 279–280
symptoms, 394
Anxiety Dimensional Observation Scale (ANX-DOS), 160
Anxiolytic effects, production, 1092
Anxious-ambivalent attachment, 253
Anxious-preoccupied attachment strategies, 747
Anxious rumination (repetitive negative thought), 345
Approach strategies, 199
Approach temperament, 705
Approval, avoidance-oriented need, 272–273
ASD. See Autism spectrum disorder
Attachment, 437–438
anxious-preoccupied attachment strategies, 747
behavioral-genetic studies, 734
Borderline Personality Disorder (BPD), relationship, 731–744
deactivating strategies, 748
disordered attachment (BPD), 732–737
epistemic trust, 765–770
externalizing psychopathology, linkage (meta-analyses), 254
figures, 561
foster care, impact, 519
genetic effects, 733–734
insecurity, 768–769
vulnerability-stress model, 263
mentoring, relationship, 731–744
neurobiology, 744–746
relationships, formation, 468–469
secondary attachment strategies, 744–758
mentoring, relationship, 747–749
system
arousal, 747
stress-induced activation, 748
theory
adaptations, 262–263
parenting theory, integration, 294
proposal, 240
Attachment and BioBehavioral Catch-Up (ABC), 445–466, 543
Attachment and biobehavioral catch-up (ABC), 445–466
Attachment theory, 249–255
application, 252–255
developmental significance/change, 250–252
theoretical underpinnings, 249–250
Attention, 323–328
activation, relationship, 619
biased attention, 326, 328
brain
imaging, 610–611
relationship, 608–611
conceptual framework, 608–620
definition, 608
deployment, 572
divided attention, 326
impulse control
dual-process perspective, 603–608
separation, 607
impulsivity, relationship, 591
information, joint processing, 132
measures, 923
examples, 327t
meta-analyses, 324t
selective attention, 325–326
skills, qualitative shifts, 190
summary, 619–620
sustained attention, 323–325
two-process model, 605–607
Type 1 attention, laboratory tests, 611–613
Type 2 attention, laboratory tests, 613–615
Attentional biases, 869
depression, association, 328
study, 328
Attentional blink, 613
Attention deficit disorder, 906
Attention deficit/hyperactivity disorder (ADHD), 68
activation, relationship, 619
ADHD-related effects, 608–620
approaches, convergence, 623–624
arousal, 615–618
autism spectrum disorder, relationship, 90
background, 596–603
biomarker studies, 631
bipolar disorder, relationship, 916
brain
activation, alteration, 611f
imaging, 610–611
childhood schizophrenia, relationship, 959
children, temporal discounting curve, 623f
clinical features/issues, 598–599
clinical prediction points, 629
clinical syndrome, 592
criminology, impact, 647–648
controversies, 595–596
criminal, development of inappropriate, 155
developmental pathways, 626–629
discussion, societal context, 595–596
effects, 620–630
emerging ADHD, 165
etiologies, 599–603
fragile X syndrome, comorbidity, 74–75
gene-environment (GxE) effects, 601–602
vulnerability, susceptibility models (contrast), 602f
health, genetic, 599–601
mutational variance, 601
heterogeneity, 626–629, 631
history, 596–598
hyperactivity/inattentiveness mechanisms, presence, 74–75
impact (DBDs), 173
inattention symptoms, impact, 325
inattentive type, 155
inhibition tasks, brain activation (alteration), 625f
laboratory tests, 611–613
liability, nonshared environmental effects, 599
medicalization, 595–596
meta-analysis results, 612f
molecular genetic meta-model, 600f
multi-network model, 610
negative inferential style, linkage, 340–341
neural/behavioral systems, development, 605–607
neuropsychological subtypes, empirical clustering, 628f
nosology, 630
ontological status, 596
physiology, CU subgroup, 627f
preschool ADHD, validity, 165–166
reaction time components
diffusion decomposition, 618f
ex Gaussian decomposition, 617f
research, future, 630–633
resource capacity limits, 615–619
response inhibition, 623–626
reward, temporal discounting, 621–623
risk, 75
scientific change, 595–596
self-control
impact, 169
typical/atypical patterns, 164–167
self-regulation, relationship, 592–594
striatal circuits, involvement, 75
symptoms
developmental analysis, 166
longitudinal predictor, 73
temperament types, empirical clustering, 629f
termiology, 603t
two-choice procedure, 622
two-factor model, 598
two-process model, 605–607
Type 1 attention, laboratory tests, 611–613
Type 1 process, 603, 604
Type 1 regulation, 603t
Type 2 attention, laboratory tests, 613–615
Type 2 process, 604–605
Type 2 regulation, 603t
white matter microstructure, 612f
youth, overstimulation, 627–628
Attention network task (ANT), response, 670
Attraction, supporting models, 285
Atypical emotional/psychological/cognitive development (increase),
early adversity (impact), 517–520
AUD. See Alcohol use disorder
Auditory processing, ERP/fMRI assessment, 46–48
Auditory selective attention, 325
Authoritarian parenting, 255
Authoritative parenting, 255
Autism
diagnosis, ability (increase), 93
science, change, 117–118
Autism Diagnostic Observation Schedule (ADOS), 24, 159
visual attention control, 138
Autism spectrum disorder (ASD), 68, 81, 958–959, 1005
activity-dependent genes, impact, 137–138
amygdala, 98
anxiety disorder, 90–91
assessment, 88–89
attention deficit/hyperactivity disorder (ADHD), relationship, 90
behaviorally based intervention models, 99
brain
regions/structures, implication, 97t
structure/function, 96–98
cerebellum, 97–98
communication disorders, 91
comorbid disorders, 89–92
complementary and alternative treatments (CATs), 99–100
core characteristics, 82–88
corpus callosum, 98
cortical regions, 98
depression, manifestation, 91
developmental psychopathology, perspective, 116
development, joint attention (usage), 119–123
diagnosis, 88–89
changes, 88–89
diagnostic description, 118–119
DSM-5 diagnostic criteria, 89t
eyperception, 84–85
environmental risk factors, 95–96
epidemiology, 93–94
etiology, 94–96
prenatal factor, relationship, 95
evaluation, indications, 93t
face perception, 83–84
face perception, atypical neural functioning (impact), 84
fragile X syndrome, comorbidity, 73–74
gastrointestinal (GI) problems, 91–92
gender, impact, 93–94
gene-environment interactions, 96
gene risk factors, 94–95
family studies, 94–95
genetic findings, 95
twin studies, 94
historical context, 81–82
historical perspective, 117–118
imitation, 85–86
impairments, 85
impairments, domains, 89
infants, social attention coordination behaviors, 121f
initiating joint attention (IJA)
effects, 136–137
initiating joint attention (IJA), dissociation, 134–136

      trauma-spectrum disorders, 387–392
      traumatized children
        associative memory, psychopathology (relationship), 573
        attention/encoding, 571–573
      trauma-focused cognitive behavioral therapy (TF-CBT), 447
Trauma-related psychopathology, 555
      child maltreatment, effects, 562–568
      depression, impact, 563–564
      development, risk factors, 39–400
      dissociative tendencies, 563
      PTSD, impact, 563
Trauma-spectrum disorders
      model, 387
      stress responsive neurohormonal systems, alterations, 407
      term, usage, 391
Trauma-spectrum model, 389
      usefulness/relevance, 390
Traumatic brain injury (TBI), 1010
Traumatic events
      child maltreatment victims, memory, 576–577
      cognitive risks, associations (occurrence), 355
      knowledge, 433
      maltreated child memory, 577
      memory, 574–576
Traumatic experiences
      dissociation/repression, impact, 569
      impaired memory theories, 569–571
      orienting, defensive responses (contrast), 569–570
      overinterpretation theory, 570
      robust memory theories, 568–569
      survival processing, 569
Traumatic reminder exposure, studies, 406
Traumatic stress
      analysis, multiple levels, 386
      effects, mediation, 409
      multilevel developmental psychopathology perspective, 386
      multilevel developmental psychopathology perspective, translational
        implications, 411
Traumatic stress, model, 401f
Traumatized children
      associative memory, psychopathology (relationship), 573
      attention/encoding, 571–573
      memory, empirical studies, 571–582
      neutral/positive events, memory, 573–574
      stressful/traumatic events, memory (impact), 574–576
      translational issues, 580
Treatment as usual (TAU), 764–765
effects, 1022
Treatment decision making, dimensional continuum (development), 175–176
Treatment Foster Care Oregon for Adolescents (TFCO-A), 542
Triangulation, process, 282–283
Trier social stress test (TSST), 575–576
Truth, impact, 876
Tryptophan hydroxylase 1 (TPH1), 916
Tryptophan hydroxylase (TPH) gene, 734
Tryptophan hydroxylase (TPH2) gene, polymorphisms, 1101
TSST. See Trier social stress test
Tumor necrosis factor-alpha (TNF-?), 1013
Two-process model, 605–607
      summary comments, 608
Type 1 attention, laboratory tests, 611–613
Type 1 processes, impulsivity (relationship), 621–623
Type 2 attention, laboratory tests, 613–615
Type 2 melanocortin receptors (MC2-R), 1014
Type 2 processes, impulsivity (relationship), 623–626
Type-of-stimulus dimension, 556
UBE3C, 856
UCLA Family Study, 960
UCSs, associative learning, 1092
Updating, EF component, 316–322
Val66Met
      BDNF Met carriers, 965
      genotype, 435
      polymorphism, 435
      Val homozygotes, 965
VBM. See Voxel based morphometry
Ventral attention network, 609f
Ventral medial prefrontal NAA, nonremitters (comparison), 931–932
Ventral tegmental area (VTA), 1096
      DA fibers, projections, 1019
      dopamine projection system, 1097
      glucocorticoid/DA systems, 1098f
      mediation, 1099
      VTA DA neurons, 1098
      VTA-NAS DA, 1098
Ventrolateral prefrontal cortex (VLPFC), 929
Ventromedial PFC (vmPFC), 745
Verbal abilities, development, 192–193
Verbal fluency, deficits, 322–323
Verbal fluency/planning, 322–323
Verbal Selective Reminding Test (vSRT), 404
Verbosity, presence, 31
Violence
      coercive joining, relationship, 665–668
      development
        microsocial coercion, 659, 668f
        questions, 668
        progression, adolescent friendship influence, 666f
VIPR2, 856
Visual attention control, 138
Vitamin E, preventive use, 985
VLPFC. See Ventrolateral prefrontal cortex
vmPFC. See Ventromedial PFC
Volumetric decreases, causes, 1018
Voxel based morphometry (VBM), 967, 981
vSRT. See Verbal Selective Reminding Test
VTA. See Ventral tegmental area
Vulnerability
      domains, 818–819
      factors, 460–461
      models, 248, 602
      narcissistic vulnerability, 684
origins, 1003–1009
reaction time vulnerability, 616
susceptibility models, contrast, 602f
Vulnerability-stress model, 263
Vulnerable narcissism, 689–691
clinical observations, 689–690
empirical evidence, 690–691
manifestations, 689–690

Waist-hip ratio, 483
Water diffusion displacement, DTI measures, 968
Wechsler Intelligence Scale for Children, 539, 964
Wechsler Memory Scale (WMS), 404
Wechsler Preschool and Primary Scale of Intelligence, 539
Well-being, neglect (impact), 527–529
White House Conference on Children, 515
White matter
childhood schizophrenia, 968
microstructure, 612f
neuroimaging assessment, 926–927
schizophrenia, 971–981
tracts
abnormalities, 972–976
