alar rim defect closure (continued)
  melolabial transposition flap, 170
  procedure, 170–172
  suture, 171
alar rim defect reconstruction, 127–130
  BCC on nasal ala, 127
  postoperative considerations, 128
  resolution, 127–128
alar rim notching, revisionary technique for, 137–144
basal cell carcinoma (BCC), 19–22
bilobed flap, 44, 46, 49
  for full-thickness nasal defect, 175–180
bilobed transposition flap, 10, 146
  Burow's (dog-ear) graft for dorsal nasal defect, 3–8, see also dorsal nasal defect
cartilage grafting, 158
chlorhexidine, 26
combined hinge and nasolabial transposition flap, 79–84
  for full-thickness nasal alar defect repair, 79–84
  combined hinge flap and nasolabial transposition flap design, 80, 80
  flap trimmed and sutured into the defect, 81, 81
  hinge flap sutured into place, 80
  intranasal mucosal repair, 79–80
  nasolabial transposition flap from left cheek elevated, 81
  postoperative clinical results, 81
  resolution, 79–81
  combined hinge flap full-thickness skin graft, 75–78
  for through-and-through nasal defect, 75–78
  combined linear closure for dorsal nasal defect, 3–8
combined nasal ala-perialar defect repair, 87–92
  shark island pedicle flap (SIPF) for, 87–92, see also individual entry
  complimentary Burow's advancement flap, 16
  contralateral nasolabial flap for a large nasal defect, 19–22
  basal cell carcinomas and surgical planning, 19
  closing of defect, 20
  conventional approaches, 22
  isolation of flap, 20
  resolution, 19–21
  surgical defect, 19
  1-year follow-up, 20
hemostasis, 20
C-shaped perialar area, 87
deep partial-thickness alar rim defects, 160
dog-ear island pedicle flap, 99–104
  for ala and nasal sidewall defect repair, 99–104
  advantages, 103
  alar crease recreated, 101
  cheek advancement, 100, 100
  postoperative results, 101
  reconstructive approach to repair defect, 101–104
  resolution, 99–100
  trapdoor effect, 101
dorsal nasal defect, 3–8
  avulsion injury, 7
  Burow's graft for, 3–8
  combined linear closure for, 3–8, 5
  conundrum keys, 5–6
  follow-up, 4, 6
  one-week follow-up, 6
  four-week follow-up, 6
  forehead flap for larger defects, 4
  granulation and epithelialization of defects, 4
  resolution, 3–5
  second-intention healing in, 4
  advantages, 4
  disadvantages, 4
superior and inferior dog-ears, removal, 5
dorsal nasal flap, for large nasal tip defects, 43–48, see also under reconstruction large nasal tip defects
double-rotation flap technique, 14
double Z-plasty, 63–67
dual nasal sidewall and lip defects combined, 25–30, see also under single arcuate advancement flap
epinephrine, 171
forehead flap for larger dorsal nasal defect, 4
full-thickness nasal alar defect reconstruction, 79–84, 119–126
  of alar rim, 151–158
  follow-up, 153–154
  interlocking auricular composite graft, 152–153
  one-stage reconstruction of, 151–158
bilobed flap for, 175–180
  combined hinge and nasolabial transposition flap for, 79–84
  Spear flap, 122–123
  three-dimensional contours, creating, 120
tunneled and turned-over nasolabial flap for, 119–126
  mucosal lining repair, 120
  resolution, 119–122
  tunnelling of nasolabial flap to repair, 122
full-thickness skin graft (FTSG), 3–4, 16, 49, 55–61, 75–78
  advantages, 3, 7
  disadvantages, 3, 7
large, exposed-cartilage nasal tip defect repair using, 55–61
for through-and-through nasal defect, 75–78
full-thickness soft triangle defect reconstruction, 113–117
full-thickness graft, 116
grafts for, 113
interpolation flaps, 113–114
reliability and vascularity in, 116
paranasal flap, 114, 114
reconstructive options, 116–117
technique, 114–115
turndown flap, 116
hemostasis, 20
inferior-lateral incisions, 164
interlocking auricular composite graft, 152
island pedicle flaps, 71–74, 131–136
for alar defect repair, 71–74
for cheek defect repair, 131–136
follow-up, 136
incision of nasal island pedicle flap, 132
inferior island pedicle flap sutured in place, 132
island pedicle flaps sutured in place, 133
lateral alar defect closure, 132
options for repair, 132
postoperative follow-up, 133
repair with hinge flap, 135
resolution, 131–134
nasolabial fold, 131
follow-up, 136
island pedicle flaps, 132–135
for lip defect repair, 131–136
for nasal defect repair, 131–136

‘Jigsaw Puzzle’ advancement flap, 93–98
for surgical defect involving the lateral nasal ala, 93–98
cheek skin adjacent to defect as advancement flap, 94
closure of defect, 94
deep alar Mohs surgical defect, 96–97
Mohs surgical defect involving ala, sidewall and medial cheek, 96
resolution, 93–95
9-week follow-up, 94
large alar defect, contralateral nasolabial flap for, 19-22, see also under contralateral nasolabial flap
large, exposed-cartilage nasal tip defect repair, 55–61
blunted alar groove after one-stage nasolabial transposition flap, 60
Mohs surgical defect of left nasal ala, 61
nasal dorsum defect after Mohs surgery, 60
resolution, 55–56
surgical defect after Mohs surgery, measuring, 55
technical aspects to be noted, 57–58
using full-thickness skin grafting, 55–61
using nasalis-based subcutaneous pedicle flaps, 55–61
lateral nasal sidewall defect reconstruction, 31–34, see also under advancement flap
left nasal sidewall, repair of, 35–39
lidocaine, 171
linear closure, 3–8, see also dorsal nasal defect
local flap closure of nasal defects, 49–54, see also under primary nasal tip closure
medial cheek, repair of, 35–39
aesthetic reconstruction, 35
challenges, 38
conundrum keys, 32–33
defect divided into cosmetic units, 36
postoperative defect, 35
post-reconstruction, 36
resolution, 31–32
melolabial transposition flap, 158, 164
Mohs surgery, reconstruction following, 9–12
reconstruction of two nasal defects, 9–12, see also individual entry
nasal ala repair, see alar defect repair
nasal dorsum transposition flap for alar rim defect closure, 169–174
nasal tip wound repair using a rhombic transposition flap, 63–67
with a double Z-plasty at its base, 63–67
bilobed transposition flap, 64
final repair, 66
first Z-plasty, 64
flap mobilized, 64–65
follow-up, 67
resolution, 63–65
skin flap as optimal method, 64
nasalis-based subcutaneous pedicle flaps, 55–61
large, exposed-cartilage nasal tip defect repair using, 55–61
nasofacial sulcus, repair of, 35–39
aesthetic reconstruction, 35
challenges, 38
conundrum keys, 32–33
defect divided into cosmetic units, 36
postoperative defect, 35
post-reconstruction, 36
resolution, 31–32
nasolabial flap (NLF), 20–21
advantages, 21
contralateral NLF, 21
conventionally pedicled NLF applications, 21
nasolabial interpolation flap, 10
nasolabial transposition flap, 10, 79–84
for full-thickness nasal alar defect repair, 79–84

one-stage reconstruction following complete alar loss, 181–185

perialar concavity (PC), 88
perichondrial full-thickness skin graft, 130
pincushioning, 29, 47
primary nasal tip closure, 49–54
to facilitate local flap closure of nasal defects, 49–54
candidate selection, 51–52
strategic subclosures, 53
technical considerations, 51–52
reconstruction of two nasal defects, 9–12
following Mohs surgery, 9–12
bilobed flap designed and executed, 50, 53
candidate selection, 51–52
defect on nasal dorsum after excision, 9
defect on nasal ala after excision, 9
immediately after reconstruction, 10
nasal tip Burow's triangle closure, 50, 53
post-Mohs surgical defect, 50
resolution, 9–10
strategic subclosures, identifying areas, 53
technical considerations, 51–52
traditional local flaps, 51
two months after reconstruction, 10
reconstruction of large nasal tip defects, 43–48
dorsal nasal flap for, 43–48
bilobed flap, 44, 46, 47
choice of dorsal nasal flap, 46
conundrum keys, 44–45
flap design, 45
follow-up, 45
full-thickness skin graft option, 44
hemostasis, 44
Mohs nasal tip defect, 43
patient-dependent physical characteristics, 43
pincushioning, 47
resolution, 43–44
skin-muscle flap, 44
standing cone deformity, excision, 44
Zitelli bilobed flap, 44
regional flap, 146
rhombic transposition flap, nasal tip wound repair using, 63–67
'rule of halves' principle, 27
second-intention healing, 4
segmental facial reconstruction, 32
shark island pedicle flap (SIPF), 87–92
for combined nasal ala-perialar defect repair, 87–92
background, 87
C-shaped perialar area, 87
final suturing (Step 7), 89, 89
first key deep suture placement (Step 5), 89, 89
methods, 87
nasal alar portion of the defect measuring (Step 1), 88, 88
objective, 87
second key suture placement (Step 6), 89, 89
shark design (Step 3), 89, 89
shark island pedicle (Step 4), 89, 89
shark's snout measurement (Step 2), 88, 88
single arcuate advancement flap, 25–30
dual nasal sidewall and lip defects combined into, 25–30
conundrum keys, 27–28
excess tissue leveling, 27
immediate postoperative result, 27
incision lines, 26
nature of conundrum, 5–26
periosteal tacking sutures, 29
pexing sutures, 28
pincushioning, 29
resolution, 26–27
secondary defects incised, 26
sutures, 26
three-month postoperative result, 27
traditional approaches used, 25
transposition flaps, 25
single-stage reconstruction, of combined upper lip and nasal ala defect, 163–167
single-tangent advancement flap, 16
skin-muscle flap, 44
soft triangle defect reconstruction, 113–117, see also full thickness soft triangle defect reconstruction
Spear flap, 122–125, 152
spiral subcutaneous island pedicle advancement flap, 71–74
for alar defect repair, 71–74
flap, design of, 72, 72
island pedicle advancement, 74
resolution, 71–73
trapdoor effect, 71–72
two-stage nasolabial transposition flap, 74
up-and-down suturing, 72
stair-step flap, 137–144
benefits, 140–142
revisionary technique for alar rim notching, 137–144
  ease of rotation of, 139
  flap design, 138–139
  fractional ablative erbium laser for hypopigmentation, 144
  full-thickness cut, 139
  methods, 137–138
  PDS plate use, 142
