CONTENTS

Preface vii
Contributors ix

1 Importance of Veterinary Drug Residues 1
Ronald E. Baynes and Jim E. Riviere

2 Pharmacokinetic Principles for Understanding Drug Depletion as a Basis for Determination of Withdrawal Periods for Animal Drugs 9
Sanja Modric

3 Evaluation of Drug Residue Depletion in the Edible Products of Food-Producing Animals for Establishing Withdrawal Periods and Milk Discard Times 35
Dong Yan

4 Establishing Maximum Residue Limits in Europe 49
Kornelia Grein and Isaura Duarte

5 Methods to Derive Withdrawal Periods in the European Union 65
G. Johan Schefferlie and Stefan Scheid
6 Population Pharmacokinetic Modeling to Predict Withdrawal Times
Sharon E. Mason

7 Physiologically Based Pharmacokinetic Modeling
Jennifer Buur

8 Residue Avoidance in Beef Cattle Production Systems
Virginia Fajt and Dee Griffin

9 Residue Avoidance in Dairy Cattle Production Systems
Geof Smith

10 Residue Avoidance in Aquaculture Production Systems
Renate Reimschuessel

11 Residue Avoidance in Small Ruminant Production Systems
Kevin Anderson and Reha Azizoglu

12 Residue Avoidance in Swine Production Systems
Ronald E. Baynes and Glen Almond

13 Confirmatory Methods for Veterinary Drugs and Chemical Contaminants in Livestock Commodities
Hui Li

14 The Food Animal Residue Avoidance Databank: An Example of Risk Management of Veterinary Drug Residues
Thomas W. Vickroy, Ronald E. Baynes, Lisa Tell and Jim E. Riviere

15 Risk Management of Chemical Contaminants in Livestock
Ronald E. Baynes and Jim E. Riviere
