Preface ix

Part I: Is There a Problem with Reliability in Medical Studies? 1

1 An Evolution of Comparative Methodology 3
   1.1 Single-subject studies 3
   1.2 Case series and cohort studies 4
   1.3 Historical controls 5
   1.4 Parallel control groups 6
   1.5 Matched studies 6
   1.6 Randomization 9
   1.7 Advance randomization 11
   1.8 Allocation concealment 12
   1.9 Residual selection bias 14

2 Susceptibility of Randomized Trials to Subversion and Selection Bias 17
   2.1 Can randomized trials be subverted? 18
   2.2 If randomized trials are subverted, do they cease to be randomized trials? 22
   2.3 What is masking? 25
   2.4 What is allocation concealment? 27
   2.5 A double standard 28
   2.6 What if allocation concealment could be ensured? 29

3 Evidence of Selection Bias in Randomized Trials 37
   3.1 The burden of proof regarding the existence of selection bias in randomized trials 38
   3.2 Indirect population-level evidence that selection bias exists in randomized trials 41
   3.3 Direct trial-level evidence that selection bias exists in randomized trials 42
      3.3.1 Heparin for myocardial infarction 43
      3.3.2 University Group Diabetes Program 43
vi Contents

3.3.3 Talc and mustine for pleural effusions 44
3.3.4 Tonsillectomy for recurrent throat infection in children 45
3.3.5 Oxytocin and amniotomy for induction of labor 45
3.3.6 Western Washington Intracoronary Streptokinase Trial 46
3.3.7 RSV immune globulin in infants and young children with respiratory syncytial virus 47
3.3.8 A trial to assess episiotomy 47
3.3.9 Canadian National Breast Cancer Screening Study 48
3.3.10 Surgical trial 49
3.3.11 Lifestyle Heart Trial 50
3.3.12 Coronary Artery Surgery Study 50
3.3.13 Etanercept for children with juvenile rheumatoid arthritis 51
3.3.14 Edinburgh Randomized Trial of Breast-Cancer Screening 52
3.3.15 Captopril Prevention Project 53
3.3.16 Göteborg (Swedish) Mammography Trial 53
3.3.17 HIP Mammography Trial 53
3.3.18 Hypertension Detection and Follow-Up Program 63
3.3.19 Randomized trial to prevent vertical transmission of HIV-1 63
3.3.20 Effectiveness trial of a diagnostic test 63
3.3.21 South African trial of high-dose chemotherapy for metastatic breast cancer 64
3.3.22 Randomized study of a culturally sensitive AIDS education program 65
3.3.23 Runaway Youth Study 65
3.3.24 Cluster randomized trial of palliative care 67
3.3.25 Randomized trial of methadone with or without heroin 72
3.3.26 Randomized NINDS trial of tissue plasminogen activator for acute ischemic stroke 74
3.3.27 Norwegian Timolol Trial 75
3.3.28 Laparoscopic versus open appendectomy 77
3.3.29 The Losartan Intervention for Endpoint Reduction in Hypertension (LIFE) Study 78
3.3.30 The Heart Outcomes Prevention Evaluation (HOPE) Study 79
3.4 In search of better evidence 81

4 Impact of Selection Bias in Randomized Trials 85

4.1 Quantifying the prediction of future allocations: balanced blocks 85
4.2 Quantifying prediction of future allocations: unbalanced blocks 90
4.3 Quantifying covariate imbalance resulting from selection bias 94
4.4 Quantifying the bias resulting from covariate imbalance 100

Part II: Actions to be Taken to Improve the Reliability of Medical Studies 103

5 Preventing Selection Bias in Randomized Trials 105

5.1 Minimizing the Impact of Selection Bias 106
5.2 Biased Selection of Investigators 106
**Contents**

5.3 Minimizing the prediction of future allocations  
5.3.1 The trade-off between selection bias and chronological bias  
5.3.2 Notation  
5.3.3 Varying the block sizes  
5.3.4 The maximal procedure  
5.3.5 Extensions  

6 Detecting Selection Bias in Randomized Trials  
6.1 Baseline Imbalances in Observed Covariates  
6.2 Testing for selection bias without baseline analyses  
6.3 The selection covariate  
6.4 The role of the reverse propensity score in third-order residual selection bias  
6.5 Using the reverse propensity score To Test for selection bias: the Berger–Exner test and graph  
6.6 Using the screening log to test for selection bias  
6.7 The Ivanova-Barrier-Berger (IBB) Detection Method  
6.8 Interpreting negative tests of selection bias  
6.9 When should one test for selection bias?  
6.10 Who should test for selection bias?  

7 Adjusting for Selection Bias in Randomized Trials  
7.1 Methods proposed for addressing non-random baseline imbalances  
7.2 Selection bias arising from a complete lack of allocation concealment  
7.3 Selection bias arising from imperfect allocation concealment  
7.3.1 The RPS approach to adjusting for selection bias  
7.3.2 The Ivanova–Barrier–Berger (IBB) method for correcting selection bias  

8 Managing Selection Bias in Randomized Trials  
8.1 Action points during the design phase of the trial  
8.2 Action points during the conduct of the trial  
8.3 Action points during the analysis of trial data  
8.4 Action points by party
