Index

Accuracy guidelines:
cancer risk assessment, 193–196
for pedigrees, 259–272
Addison disease, dementia, 136–138
Adenoma malignum of the cervix, 184, 205
Adenoma sebaceum, 179
Adenomatous polyposis coli (APC) gene,
cancer risk and, 192–193
Adoption data:
family history and, 230–237
genetic testing and, 235–236
legal issues, 231–234
medical and genetic family history form
for, 236–237
medical records, 234–235
in pedigree, 59–60
sample medical-family history form,
295–307
Adoption triad/constellation, 231
Adrenal cancer, 183, 204
Adrenoleukodystrophy, dementia,
136–138
Adrenomyeloneuropathy, dementia,
138
Affected status, in pedigree, 60–61
Age of onset:
cancer syndromes, 196, 200–205
defauness/hearing loss, 100–104
pedigree-based genetic counseling,
251–252
A1555G mitochondrial genome transition,
defauness/hearing loss and, 106
Live and well (A&W) status, in pedigree,
61
Alleles, defined, 19
Alport syndrome, deafness/hearing loss,
100–104
Alteration of pedigree data, 264–269
Alzheimer disease, 134–138
Amenorrhea, 36, 86, 161
American Board of Genetic Counseling,
255
American Board of Medical Genetics, 255
American College of Medical Genetics, 16,
235, 242, 311
American Society of Human Genetics, 225,
230
American Society of Reproductive
Medicine (ASRM), donor screening
guidelines, 241–243
Ancestral origins:
cancer risk assessment, 206
pedigree questions about, 74–76
Androgen receptor gene mutation, male infertility, 165–168
Aneurysms, congenital heart defects, 145
Angelman syndrome, genomic imprinting, 41–42
Anticipation, triplet repeat disorders, 36–38
Anticipatory guidance, pedigree data, 269–270
Anti-sense DNA template, 21
Anxiety:
cancer testing and, 208–209
genetics counseling and, 253
APOE gene, Alzheimer disease, 136–138
APP gene, Alzheimer disease, 136–138
Arrhythmogenic right ventricular dysplasia/cardio-myopathy (ARVD/C), 145
Ashkenazi Jews, 29, 75
Asperger syndrome, 121–122
Assessment process, genetics counseling, 254–255
Assisted reproductive technologies (ART):
donor screening, 241–243
family history and, 239–245
gamete donation, 239–245
intracytoplasmic sperm injection, 243
male infertility and, 167–168
offspring of donor-conceived pregnancies, 245
in pedigree, 59
on pedigree (gamete donation and surrogacy), 243–245
Assortative mating, 24
Asthenozoospermia, 164–168
Asymptomatic carrier, abnormal genetic testing, 64–65
Ataxic cerebral palsy, 124–125
Atheroid cerebral palsy, 124–125
Atonic/hypotonic cerebral palsy, 124–125
Atrial septal defect, 95
Autism spectrum disorder, 120–123
Autonomic nervous system dysregulation, sudden infant death syndrome and, 168–169
Autosomal dominant disorders, 23
acute intermittent porphyria, 142–143
cancer predisposition syndromes, 181–193, 207
deafness/hearing loss, 99–100
examples of, 25–27
vision impairment, 109–113
Autosomal recessive disorders, 23
deafness/hearing loss, 99–100
donor screening for, 242–243
Examples of, 29, 146, 165, 327
inheritance patterns, 28–30
intellectual disability, 114–120
vision impairment, 109–113
Autosomes, 19
Autozygosity, autosomal recessive disorders, 28–30
A&W, in pedigree, 61
Azoospermia, 163–168
intracytoplasmic sperm injection and, 243
Azoospermia factor (AZF), Y-inheritance and, 34
Bannayan-Zonan/Bannayan-Ruvalcaba-Riley syndromes, 192–193
Basal cell carcinoma, 179, 191
Beckwith-Wiedemann syndrome, cancer risk and, 197–198
Behavior problems:
intellectual disability assessment and, 119–120
mental illness, 139–143
Biallelic inheritance, 23
autosomal dominant disorders, 27
cancer risk and, 207
Bipolar disease, 139–143
Birth anomalies and variants, 87–98
chromosomal inheritance, 35–36
cleft lip/palate, 92, 94–95
congenital heart defects, 95
examples of, 88
kidney and urinary tract, 149, 151–154
neural tube defects, 95–97
normal variations vs., 89–90
in pedigree, 71
skeletal system, 152, 154–158
ultrasound detection, 97–98
vision impairment, 107–113
Birt-Hogg-Dubé syndrome, 152–154
INDEX

Bladder cancer, 195
Blended families, pedigree for, 55, 57–58
Blindness. See Vision impairment

BMPR1/ALK3 mutation, cancer risk and, 192–193
Box charts for family history, 227–228
Boyd-MacDonald, Dona, 208
Brain tumors, 183, 186
Branchio-oto-renal syndrome (BOR), 100–104
BRCA gene mutation:
  cancer risk assessment, 194–196, 206
  prediction models for cancer risk, 209–211
Breast cancer, 178, 183, 190–192, 201
Brugada syndrome, 145
Burden of disease, adoption data and, 234

Café au lait spots, 179

Cancer and cancer syndromes:
  accuracy guidelines for diagnoses, 193–196
  age of onset, 196, 200–205
  ancestral information, 206
  case study, 321–325
  consanguinity and, 206–207
  documentation guidelines for family history, 193
  environmental and occupational risk factors, 198–200
  family history and risk assessment, 177–193
  inherited syndromes, 196
  kidney, 152–154
  metastasis, 179
  pedigree-based diagnosis of, 5–6, 74, 177–212
  prediction models, 209–211
  psychosocial aspects of pedigree analysis, 208–209
  questionnaire for family history, 49, 179–181
  questions on pedigree about, 74
  rare cancer and heritability, 197
  sample genetic screening form, 292–294
  sex-limited/sex-influenced and parent of origin effects, 197–198
  sporadic/new mutations, assumptions concerning, 200–205
  verification of diagnosis, 221

Cardiac conduction defects, 145–149
Cardiac system. See also Congenital heart defects (CHD)
  disorders of, 143–149
  pedigree questions about, 69
Cardiomyopathies, 143–145, 147–149
Carrier status:
  abnormal genetic testing and, 64–65
  susceptibility testing and, 250
Cataracts, 109–113
  case study, 317–319
Catecholaminergic ventricular tachycardia, 145

CDH1 gene, 197

Cerebellar gangliocytoma, 178, 183, 201
Cerebral palsy, 122, 124–126
Channelopathies, cardiac, 145–149
Charcot-Marie-Tooth neuropathies, 125–127
Childlessness (voluntary), in pedigree, 60

Chromosomal inheritance, 35–36
  cancer susceptibility, 181–193
  donor screening for, 242–243
Chromosomal mosaicism, 44
Chromosomes:
  anomalies:
    cleft lip/palate disorders, 94–95
    deafness/hearing loss, 99–100
    female infertility, 161, 163–164
    intellectual disability, 114–120
    male infertility, 164–168
    multiple birth defects, 91
    multiple miscarriages, 160–168
    pervasive developmental disorders, 121–122
    vision impairment, 109–113
  genetics principles and, 19–22

Choroid plexus tumor, 178, 201
Chronic genetic disorders, 249
Chronic respiratory disease, 145, 149–151, 319–321
Chronic sorrow, 249, 251, 256

Claus cancer prediction model, 209–211

Cleft lip/palate disorders:
  autosomal dominant inheritance, 27
  ethnicity and risk of, 90–91
  pathophysiology, 92, 94–95

Client rapport, family history as tool for, 8–9

Clinical heterogeneity, 24–25
INDEX 343

Closed adoption:
  laws concerning, 232–234
  medical information from, 234–235
Co-dominant inheritance, 25
  COL4A gene loci, deafness/hearing loss, 100–104
Coloboma, iris, 89, 109, 153
Colon cancer, 178, 184, 190, 191, 194–195, 199, 203
Communication lines:
  with family members, 222
  in genograms, 12–14
Communication skills, for pedigrees, 65–66
Comparative genomic hybridization, intellectual disability assessment, 116–120
Complex genetic disorders, 249
Compound heterozygosity, autosomal dominant inheritance, 27
Conduction defects, cardiac, 145–146
Conductive hearing loss:
  defined, 100
  fetal alcohol syndrome, 106
Confidentiality. See also Privacy issues
  adoption laws concerning, 231–234
  family history and, 79
  genetic counseling, 248
  for pedigree results, 259–272
  publication of pedigree data, 264–267
Congenital absence of the vas deferens (CAVD), 165–168
Congenital disabilities. See Birth anomalies and variants
  nephrosis, 151
Congenital heart defects (CHD), 95–96.

### INDEX

Inheritance patterns:
- autosomal dominant inheritance, 25–27
- autosomal recessive inheritance, 28–30
- cancer risk and, 181, 190–193
- chromosomal inheritance, 35–36
- confounding factors, 23–25
- contiguous gene syndromes/segmental aneusomy, 40–41
- dominant and recessive patterns, 25
- environmental factors, 44
- genomic imprinting, 41–42
- hereditary mutations, 43
- list of, 327–339
- mitochondrial inheritance, 38–40
- mosaicism, 44
- multi-allelic inheritance, 23
- multifactorial-polygenic disorders, 34
- nontraditional, 36–43
- patient beliefs and misconceptions concerning, 11–14
- pedigree analysis and, 6
- sporadic, 44
- triplet repeat disorders/dynamic mutations, 36–38
- uniparental disomy, 43
- vision impairment, 108–113
- X-linked inheritance, 31–33
- Y-inheritance, 33–34
- Institutional Review Boards (IRBs), 264–267
- Intellectual disability. See also Dementia
  - case study, 313–319
  - pedigree questions about, 71
  - pervasive developmental disorders, 121–122
- Intermediate expression, 25
- X-linked inheritance, 31–33
- International Society of Nurses in Genetics (ISONG), 255
- Intervening sequences (IVSs). See Introns
- Interview questions, in pedigree, 71–76
- Intracytoplasmic sperm injection (ICSI), 167–168
  - genetic disease and, 243
- Intrauterine fetal death, 160–168
- Introns, 21
- In vitro fertilization, 167–168
- IRF6 gene, cleft lip/palate disorders, 94–95
  - Iris colobomas (notching), 109–113
  - Jervell-Lange-Neilsen syndrome, 145
  - Juvenile polyposis syndrome, 192–193
  - Kallmann syndrome, 84–86
  - female infertility, 161, 163–164
  - Kartagener syndrome, 146, 165–166, 333, 336
  - Kearns-Sayres, 40, 137–138, 148
  - Kennedy’s disease, 166
  - Key for pedigree, 50
  - Kidney:
    - cancer of, 152–154
    - congenital malformations, 149, 151–154
    - cystic disease of, 149, 151–154
  - Kinship terminology, in pedigree analysis, 76–77
  - Kliefelter syndrome, 164–168
  - intracytoplasmic sperm injection and screening for, 243
  - Labeling of patients with genetic disorders, 249–250
  - Lactic acidosis, 40, 137
  - Lamellar cataracts, 109–113
  - Language guidelines for pedigrees, 65–66
  - glossary of terms, 274–286
  - health and disease definitions and, 250
  - intellectual disability assessment, 114–120
  - medical terminology changes, 225–226
- Leading questions, avoidance in pedigree of, 66
- Legal issues:
  - in adoption, 231–234
  - genetic discrimination, 249–250
- Legend for pedigree, 50
  - Leukemia, 180, 191
  - Lifestyle factors, cancer risk and, 198–200
  - Li-Fraumeni syndrome, 180, 182, 183–185, 193–194, 196–197
  - Limb anomaly, 88, 106, 111, 153
  - Line definitions in pedigrees, 51–52
  - Line of descent, 52
  - Lipomas, 180
  - Listening skills for pedigrees, 66–67
  - Liver (hepatocellular) cancer, 180, 190–191
  - LMNA mutations, cardiomyopathies, 145
INDEX

Locus, defined, 19
Long QT syndrome, 145
  sudden infant death syndrome and, 168–169
Lung cancer, 44, 178, 198
Lynch syndrome, 181, 192–193
  age of onset, 196
  constitutional mismatch repair deficiency, 207
Lyonization, X-linked disorders and, 31–33
Macrocephaly, 122, 180, 185
Major inherited disorders, donor screening for, 241–243
Male infertility:
  disease susceptibility and, 84–86
  family history and, 163–168
Male-to-male transmission, X-linked inheritance and, 32–33
Malformation, defined, 91
Malignancy risk, single-gene and chromosomal disorders, 181–193
MAPT mutation, dementia, 136–138
Marfan syndrome, 26, 27, 109, 133–134, 147–148, 334
Marital history, in pedigree, 57–58
Masking, of pedigree data, 264–269
Maturity onset diabetes of the young (MODY), 154, 158–159
MECP2 mutation, Rett syndrome, 121–122
Medical data and records. See also Family history
  abnormal fetal ultrasound, 97–98
  adoption records, 234–235
  birth anomalies and variants, 91–93
  deafness/hearing loss, 100–104
  documentation for pedigree, 61–64
  documentation request procedures, 223–225
  electronic records, pedigree data and, 267–271
  privacy of records, 222
  systems-based questions in pedigree, 68–71
  vision impairment, 108–113
Medical education:
  genetics counseling and, 254–255
  pedigree as tool for, 9–11
Medical pedigree. See Pedigree
Medical screening, pedigree identification and, 8
Melanoma, 185, 189, 196
Mendelian inheritance, basic principles, 18–22, 44–45
Mental illness, 138–144
  pedigree-based genetic counseling, 252
Mental retardation. See Intellectual disability
Metabolic disorders, dementia, 136–138
Metabolic testing, intellectual disability assessment, 116–120
Metastatic sites, cancer risk assessment, 194–196
Microarray comparative genomic hybridization (aCGH), pervasive developmental disorders, 121–122
Microcephaly, 88–89, 103, 119, 123, 130, 153
Microdeletion syndromes, 40–41
Micrognathia, 89, 91–92, 103
Microscopic Yq-deletions, male infertility, 165–168
Misattributed paternity, 24–25
Miscarriage, recurrent
  cause of, 160–161
  chromosomal inheritance and, 35–36
  pedigree questions about, 162–163
Missense mutation, 22–23
Mitochondrial DNA, ancestral testing, 76
Mitochondrial inheritance, 18–19, 22
  deafness/hearing loss, 99–100
  male infertility, 165–168
  patterns in, 38–40
Mitochondrial myopathy, 86, 99–100
  dementia, 138
Molecular genetics, cancer risk and, 192–193
Mosaicism, 44
  female infertility, 161, 163–164
  multiple miscarriages, 160–168
mRNA molecule, genetics principles and, 22
MSX1 gene, cleft lip/palate disorders, 94–95
Mucopolysaccharidoses, 89, 123, 156–157, 332, 337
Multi-allelic inheritance, 23
Multifactorial disorders, 34
  birth anomalies and, 88–99
INDEX

Multigeneration pedigree, 5–7
Multiple lenticousus, 109–113
Multiple miscarriages, 158–168
Muscular dystrophies, 127, 148, 159
Mutations:
categories, 22–23
hereditary mutations, 43
“My Family Health Portrait” pedigree software, 49
MYH mutations:
cancer risk and, 206
cardiomyopathy, 144
Myotonic dystrophy, 36–37, 117, 149, 159, 166–167
Myriad-Frank cancer prediction model, 211
Nail-patella syndrome, 151–154
National Coalition of Health Providers Education in Genetics (NCHPEG), 4
Nasal polyps, 183
National Society of Genetic Counselors (NSGC), 4, 251, 254–256
National Society of Genetic Counselors, 4, 251, 254m
Negative family history, inheritance patterns and, 24–25
Nephritis, hereditary, 151–154
Nephrogenic diabetes insipidus 1 (ND1), 151–154
X-linked inheritance, 31–33
Neural tube defects, 95–97
Neurofibromatosis 1, 2, 197
Microdeletion syndromes, 41
Neurolignin3/neurolignin4 testing, autism assessment, 122
Neurological/neuromuscular system.

gastric, 184
nasal, 150, 167, 183
Porphyria, 75, 141–142, 144, 336
Positive result, definitions of, 64
Postaxial polydactyly, ethnicity and risk of, 90–91
Prader-Willi syndrome:
genomic imprinting, 41–42
intellectual disability assessment and, 119–120
Prediction models, cancer risk assessment, 209–211
Predisposition genetic testing, 64–65
Pregnancy:
donor-conceived, 245
intellectual disability assessment and difficulties in, 118–120
multiple miscarriages and infertility, 158–168
pedigree-based genetic counseling, 252
pedigree symbols for, 57, 59
surrogacy, 243–245
Premature birth:
intellectual disability assessment and, 118–120
multiple miscarriages, 160–168
Premature ovarian insufficiency, 161, 163–164
Presymptomatic carrier:
abnormal genetic testing, 64–65
pedigree-based genetic counseling, 252
Presymptomatic testing, 250
Pre-vivors, defined, 250
Primary ciliary dyskinesias (PCD), male infertility, 165–168
Privacy issues:
adoption laws, 231–234
donor adoptee, 245
family history, 222
publication of pedigree data, 264–267
Proband, 50
Professional development and standards, genetics counseling, 255–256
Proportionate short stature, 152, 154–158
Propositus, 50
Prostate cancer, 178, 184, 194, 197
PS1/PS2 gene, Alzheimer disease, 136–138
Psychosocial issues:
of cancer risk assessment, 208–209
in genetics counseling, 247–251
genetics counseling session, 254–255
pedigree-based genetic counseling, 251–252
PTEN gene mutation:
cancer risk and, 192–193
pervasive developmental disorders, 122
Publication issues with pedigree data, 264–267
Pulmonary arterial hypertension (PAH), 145, 149–151
Quadriplegia, spastic, 124–125
Question guidelines:
cancer queries, 49, 179–181
directed family history, overview of, 83–86
for pedigrees, 65–66, 68–77
Rare cancers, inheritability, 197
Recessive inheritance, defined, 25
Reciprocal translocations:
amale infertility, 164–168
multiple miscarriages, 160–168
Reinoblastoma, 178
Relationship line, 51
pedigree-based genetic counseling, 252
Release forms, medical records, 223–225
Renal amyloidosis, 151–154
Renal system:
  Carcinoma, 178 183, 185, 188, 204
deaflness/hearing loss and anomalies of, 100–104
disorders of, 149, 151–154
pedigree questions about, 70
Renal tubular acidosis, 151–154

Reproduction:
  adoption records and, 230–237
genetics counseling and planning for, 248
intellectual disabilities and consideration of, 116–120
medical evaluation/examination questions, 70
multiple miscarriages and infertility, 158–168
pedigree symbols for, 57, 59
REPRORISK information system, 71–73

Respiratory system:
  Add carcinoma, 178
chronic respiratory disease, 145, 149–151
pedigree questions about, 69

Respiratory system:
  Add carcinoma, 178
chronic respiratory disease, 145, 149–151
pedigree questions about, 69

Research aspects of family studies,
263–264
publication of pedigree information,
264–267

Respiratory system:
  Add carcinoma, 178
chronic respiratory disease, 145, 149–151
pedigree questions about, 69

Restrictive cardiomyopathy, 145

Retinal degeneration, 109–113
Retinitis pigmentosa, 40–41, 102, 106, 108,
137–138, 144, 159

Rett syndrome, 121–122

Rice, Josephine B., 10

Risk assessment:
cancer family histories, 177–196
gamete donation and genetic disorders,
239–241
genetic vs. non-genetic risk assessment,
6, 8
pedigree analysis and, 4–6
stroke, 131–134

Robertsonian translocation:
  male infertility, 164–168
multiple miscarriages, 160–168

Sarcoma, 185, 190–192

Sclerae, blue or gray, 89, 102, 157

SCN5A mutations, sudden infant death
syndrome and, 168–169

Sebaceous adenoma or adenocarcinoma,
180, 185, 205

Second-degree relatives, 53

Segmental aneusomy, 40–41

Seizures, 127, 129–131

Self-reporting accuracy guidelines, cancer
risk assessment, 194–196

Semen analysis, male infertility, 163–168

Semi-dominant inheritance, 25

Sense strand, 21

Sensorineural hearing loss:
cardiac conduction defects, 145
defined, 100
mitochondrial myopathies, 99–100
as syphilis complication, 104–106

Sertoli cell tumors, 184, 205

Sex cord tumor with annular tubules
(SCTAT), 178, 184, 205

Sex-influenced/sex-limited gene expression,
24–25
cancer and cancer syndromes, 197–198

Short QT syndrome, 145

Sibship line, 51–53
cancer family history, 193
pedigree-based genetic counseling,
251–252

Sickle cell disease, 152–154

Significant life events, in pedigree, 67

Single-gene disorders, 23
  birth anomalies and, 88–99
cancer susceptibility, 181–193
chronic respiratory disease, 145, 149–151
mental illness, 139–143
multiple miscarriages, 160–168
neurological/neuromuscular disorders,
127
stroke, 131–134

  Trisomy 13, cleft lip/palate disorders, 94–95
  Trisomy 18, cleft lip/palate disorders, 94–95
  Trisomy rescue, 43
  Tuberous sclerosis complex, 122
  kidney disorders, 152–154
  Tubular disorders (renal), 151–154
  Tumors, benign, 183–189
  Turcot syndrome, 192–193
  Turner syndrome, 160–164
  22q11.2 deletion syndrome, 94–95
    congenital heart defects, 145
    mental illness and, 142–143
    pervasive developmental disorders, 121–122
INDEX 355

UBE3A mutation, Angelman syndrome, 42
Ultrasound examination, birth anomalies and variants, 97–98
Unaffected carrier, 250
Uniparental disomy, 19
cancer and cancer syndromes, 197–198
inheritance patterns, 43
Uniparental heterodisomy, 43
Unipolar disease, 139–143
Unknown family history, in pedigree, 61
Unpatient, defined, 250
Unremarkable family history, 79
Uremic syndromes, 151–154
Urinary tract malformations, 149, 151–154
Usher syndrome, 29, 102, 106, 108, 338
Uterine cancer, 178, 194, 199, 202
Valproic acid exposure, neural tube defects, 97
Valvular congenital heart defects, 145
Van der Woude syndrome, 26, 94–95, 102, 338
Variable expressivity, inheritance patterns, 24–25
Variant of unknown significance (VUS), 23
Variation, in pedigree, 14
Vascular dementia, 134–138
Velocardiofacial syndrome, 94–95
Ventricular septal defect, 95
Verification tools for family history, 220–228
Vision impairment, 107–113
case study, 317–319
eyearly-onset cataracts, 109–113
Von Hippel-Lindau syndrome:
kidney disorders, 152–154
patient education concerning, 9–11
pedigree-based diagnosis of, 6–7
testing strategies and risk assessment, 6
Waardenburg syndrome, 26, 89, 100, 102–103, 106, 339
Websites for genetic family history:
adoption data resources, 234
cancer prediction models, 211
genealogical web sites, 228
general internet resources, 309–312
genetics counseling resources, 255–256
patients’ recording tools for medical-family histories, 226–227
pedigree programs, 49, 262–263
Williams syndrome, 155
Wilms tumor, cancer risk and, 197–198
Wilson disease, 142–143
X chromosomes:
genetics principles and, 19–22
multiple miscarriages, 160–168
Xeroderma pigmentosa, 191
X-inactivation, X-linked disorders and, 31–33
X-linked disorders, 23
autism, 122
cardiomyopathies, 145–149
deafness/hearing loss, 99–100
dementia, 136–138
familial impact of, 248
inheritance patterns, 30–33
intellectual disability, 114–120
multiple miscarriages, 160–168
stroke risk, 131–134
vision impairment, 109–113
Y chromosomes:
ancestral testing, 76
 genetics principles and, 19–22
intracytoplasmic sperm injection and deletion screening, 243
Y-inheritance, 33–34
Y-linked disorders, 23
Zonular cataracts, 109–113
