summative outcome, notion of, 11
symptoms, autism
ASD symptoms, level of severity, 247
Autism Diagnosis Observational Schedule, 246
diagnostic categories, 246, 246
Gillian Autism Rating Scale, 246
outcome-effectiveness, 247
TEACCH see Treatment and Education of Autistic and Related Communication Handicapped Children programme
teaching environment modification techniques
Daily Living Skills Therapy (Higashi), 149–153
environmental interventions, 133
environmental-manipulation approaches, 133–134
LEAP see Learning Experiences and Alternative Programme for preschoolers and their parents
parent-mediated approaches, 134
TEACCH see Treatment and Education of Autistic and Related Communication Handicapped Children Programme
‘theory of mind’, 25, 45–48
‘Tomatis’ method, 209
Treatmet and Education of Autistic and Related Communication Handicapped Children programme, 3, 225, 248, 283
aims and philosophies, 136
change in functioning, outcome-effectiveness studies
adaptive and social behaviours, 142
adult PEP-R, 141, 142
intellectual, language and adaptive-social behaviours, 140
language functioning, 141–142
long-term outcome, 142
pre-to-post intervention effect sizes, 140–141, 141
characteristics, 134, 135
classroom environment, 137
control group, comparison, 142–143
effectiveness, reviews
ASD individuals, functioning of, 138
components, impact of, 137–138
goals, assessment, 138
functioning domains, 139–140
individual outcome effectiveness studies, 285
‘person-centred’ approach, 134, 136
predictors of outcome
effect size outcomes (pre-to-post programme changes), 143, 144
intellectual functioning and language, 143–145
participant characteristics, 144
theories of language development, 144–145
self-initiated communication, 137
stake-holders, cooperation between, 136
study characteristics, 139, 140
teaching principles, 136–137
visual activity schedules, 137

UCLA/Lovaas approach
conditioning-based explanations, 67
criticisms, 70
control groups, 72–73
impact, use of mixed tests, 71
instrumentation, 70
IQ tests, 70
location, 75
outcome measures, 74–75
participant allocation, 71–72
threats to external validity, 73–74
threats to internal validity, 69–70
treatment integrity, 72–73
curriculum, 66
discrete-trial reinforcement-based method, 65
‘early intensive behavioural intervention’ programme, 64
‘free-operant’ background, 67
improvements for children, 65
initial outcome evaluation study
intellectual functioning, improvement, 68
results, 69
institutional-care setting, 67
outcome-effectiveness, 67
overview, 66
stages in a single trial, 66
UK Education Act, 1870, 262
UK Mental Deficiency Act (1913), 262

VABS see Vineland Adaptive Behavior Scales
‘Verbal Behaviour’ behavioural approach, 129
verbal behaviour programme
areas targeted by ‘Verbal Behavior’ ABA programme, 79
effectiveness
Natural Environment Training, 82
verbal behaviour, Skinner’s, 80–81
verbal behaviour vs. UCLA/Lovaas, 82
forms, 78
principles
‘Incidental Training,’ 77
language, form of behaviour, 77
language, structured forms, 76–77
‘Mand-Model’ approach, 77
‘Natural Environment Training’ approach, 77
teaching procedures
automatic reinforcement, 80
development of ‘intraverbal’ responses, 80
‘establishing operations,’ to teach mands, 79–80
linguistic competence, 79
self-injurious behaviours, 79
use of mands’ by child, 77
verbal communication, deficits in, 28
Vineland Adaptive Behavior Scales, 84, 177
visual activity schedules, 137
visual stimulation therapies
spatial orientation and abilities, 212–213
use of prism lenses, 212
VST see visual stimulation therapies
weak central coherence theory, 50–51
Wechsler Intelligence Scale for Children–Revised, 264, 265
within-person theories
evaluation, 51–52
high-level theories
‘appearance-reality’ task, 47
‘extreme male brain’ theory, 47
‘false belief task’ attempts, 47
foetal testosterone levels and eye-contact, relationship, 48
interventions, 48–49

‘modularity of mind’ hypothesis, 46
social-affective impairments, 46
specific social-emotional deficits, 45
teaching interventions, 49
‘theory of mind’ deficits, 45–48

low-level theories
aspects of the processing channel, 50
executive dysfunction, 50–51
weak central coherence theory, 51
Weak Central Coherence view, 50
‘Modularity of Mind hypothesis, 45
‘within-child’ conceptualizations, 52
