## 8 Meat hygiene practice

### Meat and animal by-products
- **Hygienic production** 159

### Sources of contamination
- **Outer integument – hide, hair, fleece or skin** 159
- **Gastrointestinal tract** 160
- **Stunning and sticking** 160
- **Physical contact with structures** 160

### Methods of reducing contamination
- **Dealing with the dirty animal** 162
- **Clipping cattle on line** 163
- **Protecting the meat from the worker** 163

### Dressing techniques – Removal of hide/fleece/hair
- **Preventing contamination from the gastrointestinal tract** 170

### Post-slaughter decontamination
- **Water** 172
- **Trimming** 173
- **Chemical treatments** 173
- **Bacteriophages** 174
- **Ultraviolet and pulsed high-intensity light** 174

### Outputs of the slaughterhouse
- **Fats** 175
- **Edible fat rendering** 176
- **Stomach and intestines** 176
- **Bones** 177
- **Hides and skins** 177

### Animal by-products
- **Category 1** 178
- **Category 2** 179
- **Category 3 (can be used for pet food)** 180
- **Materials for technical uses** 181

### Hygiene requirements for animal by-product processing establishments 183

### Rendering processes 183

### References 184

## 9 Meat inspection protocols

### The case for change 185

### The holistic approach 187

### Integrated Food Safety Assurance
- **Farm to fork** 187
- **Food chain information** 187

### Ante-mortem inspection 188
- **Ante-mortem inspection procedure in the slaughter establishment** 189
- **Practical ante-mortem procedure** 190
- **Emergency slaughter animals** 191
- **Emergency slaughter: The decision on farm** 191
- **Emergency slaughter: The decision at the slaughter establishment** 192

### Post-mortem inspection 192
- **Facilities for post-mortem inspection** 192
- **Carcase identification and traceability** 193
- **Traditional post-mortem inspection of cattle** 194
- **Traditional post-mortem inspection of calves** 196
- **Traditional post-mortem inspection of sheep and goats** 196
- **Traditional post-mortem inspection of pigs** 196
- **Traditional post-mortem inspection of equines** 197
- **Traditional post-mortem inspection of poultry** 197

### Decisions at post-mortem examination 198

### Common post-mortem findings
- **Abscesses** 203
- **Omphalophlebitis** 204
- **Arthritis** 204
- **Oedema** 204
- **Pneumonia and pleurisy** 205
- **Endocarditis** 206
- **Pericarditis** 207
- **Pyelonephritis** 207
- **Brusing** 208
- **Pigmentation** 208
- **Haematogenous pigments** 209
- **Bile pigments** 209
- **Porphyrin** 210
- **Lipofuscin (‘wear-and-tear pigment’, pigment of brown atrophy, lipochrome, haemofuscin)** 211
- **Xanthosis (xanthomatosis, osteohaematochromatosis, brown atrophy)** 211
- **Tumours** 211

10 Poultry production, slaughter and inspection 223

Production of poultry
- Poultry feedingstuffs
- Poultry flock health
- Catching and crating
- Reception and unloading
- Pre-slaughter inspection
- Shackling
- Stunning and slaughter
- Scalding and defeathering
- Defeathering
- Evisceration
- Chilling

Ante-mortem health inspection 237
Post-mortem inspection in the plant 240
Decision of the official veterinarian at the post-mortem inspection 241
General contamination 242
Guidelines on trimming poultry 242
- Coliform infections
- Salmonellosis
- Campylobacteriosis
- Chlamydiosis (psittacosis/ornithosis)
Miscellaneous conditions 245
- Dead on arrival

- Bruising and fractures
- Breast blisters and hock burn
- Ascites
- Slaughter liver or cholangiohepatitis
- Fatty liver haemorrhagic syndrome (FLHS)
- Vices
- Contamination
- Decomposition
- Barking
- Diseases of the female reproductive system
- Oregon disease
- Over-scaled
- Fevered carcasses
- Septicaemia
- Insufficient bleeding
- Emaciation
- Viscera absent

References 248
Further reading 248

11 Exotic meat production 249
Rabbits 249
- Slaughter
- Inspection
- Post-mortem judgements in rabbit meat inspection
- Zoonoses

Guidelines on contamination, missing viscera and trimming 252

Farmed deer 252
- Handling and slaughter
- Park deer
- Wild deer
- Killing

Ostriches 255
- Restraint
- Stunning
- Dressing
- Changes after slaughter

Commercial squab production 257
Further reading 257

12 Food poisoning and meat microbiology 259
Part 1: Food poisoning 259
- Types of food poisoning
- Surveillance of food poisoning
- Laboratory reports of enteric infections
- Outbreak surveillance
- General considerations
- Food-borne pathogens

Part 2: Meat microbiology 267
- Bacteriological examination of carcases
Part 3: Meat decomposition and spoilage 271
  Assessment of decomposition 277
  Further reading 278

13 Controls on veterinary drug residues in the European Union 279
  Legal framework 279
    Licensed veterinary medicines 279
    Hormones and β-Agonists 280
    Prohibited compounds 280
    Unauthorised and unlicensed compounds 281
    Regulatory limits: MRLs, MRPLs and RPAs 281
  The National Residue Control Plan in EU member states 282
    Compound groups 282
    Sampling levels for each species 282
    Relationship between species and substance to be analysed 283
  Testing procedures and performance characteristics 284
    Testing procedures 284
    CCα and CCβ 285
  Sampling of imported food 285
    Legal basis for sampling of imports from third countries 285
    Frequency of sampling of imports from third countries 285
    Interpretation of non-compliant results 285
  The Rapid Alert System for Food and Feed (RASFF) 285
    Legal basis and description of the RASFF 285
    RASFF notification types 286
    Notification basis 286

14 Health and safety in meat processing 291
  Accident statistics 291
  UK legislation 291
  General duties 292
  Key topics requiring risk assessment 293
    Being struck by hand tools including knives 293
    Musculoskeletal disorders 294
