A
Ability-achievement discrepancy, learning disorder in mathematics with, 265
Ability-achievement discrepancy analysis, Q-global, 117–118, 118
Administration. See Test administration
Alfonso, V. C., 140, 142, 147
Arithmetic process approach (ARP), 11, 13, 16
  average reliability coefficients of, 27, 28
  behavioral observations for, 68–69
  common errors in administration of, 82
  discontinue rules for, 49
  domain membership for, 42
  g loadings with, 29
  mean performance of language disorder sample on, 185
  mean scores of intellectual disability children in, 205
  mean scores of intellectual gifted children in, 202
  mean scores of language disorder children in, 213
  mean scores of learning disorder in math children in, 208
  mean subtest effect sizes for clinical samples in, 186
  pairwise comparisons with arithmetic and, 164–165
  pairwise comparisons with written arithmetic and, 165
  reverse rules for, 48
  scoring for, 95, 96–97
  start point for, 46
  test administration for, 67–68, 68–69
  timing rules for, 51
Attention-deficit/hyperactivity disorder
  applications of WISC-V Integrated for children with, 209, 210
  associative memory with, 238–239
  associative verbal fluency with, 237
  attention and executive functioning with, 240
  available support systems for, 233
  background on, 231–232, 231–233
  behavioral functioning with, 240
  behavioral observations on, 233–234, 233–235
  CELF-5 scores for, 250
  cognitive functioning with, 236
  cognitive speed with, 239
  composite score summary with, 246, 247
  coping mechanisms for, 233
  counseling for, 243
  current symptoms with, 230–231
CVLT-C scores for, 250
diagnostic impressions with, 241, 241–242
emotional functioning with, 240
evaluation procedures for, 229, 229–230
family history with, 232
general verbal knowledge with, 236–237
history for, 231–232, 231–233
history of presenting problems with, 232
home with, 243
identifying and demographic information for, 226, 226
intellectual ability with, 236
interpretation of, 235, 235
KTEA-3 Form A for, 248
language with, 236
learning with, 238
listening comprehension with, 237
longest span scores for, 248
long-term auditory memory with, 239
long-term visual memory with, 239
mean scores of children with, 210
medical and developmental history with, 232–233
medication for, 242
memory with, 238
mental status with, 233–234, 233–235
NEPSY-II scores for, 248–250
patient’s strengths with, 233
physical exercise for, 242
problem-solving with, 238
processing speed with, 239
psychotherapy for, 243
rapid automatic naming with, 239
reasoning with, 238
recommendations for, 241, 242
referral questions and answers for, 227–228, 228
school with, 244–245
short-term auditory memory with, 239
short-term visual memory with, 239
social perception with, 240
social skills with, 240
speech with, 236
test data with, 245, 245–250, 250, 251–254
test results with, 235, 235
verbal comprehension with, 236–237
visual spatial processing with, 237
WISC-V Integrated coding recall scores for, 248
working memory with, 238
Auditory working memory index mean composite scores for, 201
mean scores of attention-deficit/hyperactivity disorder children in, 210
mean scores of autism spectrum disorders children in, 218
mean scores of traumatic brain injury children in, 211
mean subtest effect sizes for, 188
primary index scores alternatives with, 144
WISC-V Integrated subtest score groups correlations with, 24
Autism spectrum disorder children, 216–219, 217–218

B
Block design multiple choice (BDMC), 11, 12, 16
attention-deficit/hyperactivity disorder with, 245
average reliability coefficients of, 27
behavioral observations for, 64
common errors in administration of, 82
discontinue rules for, 49
domain membership for, 42
g loadings with, 29
learning disorder in mathematics with, 263
mean performance of language disorder sample on, 185
mean scores of autism spectrum disorders children in, 217
mean scores of language disorder children in, 213
mean scores of learning disorder in reading children in, 207
mean subtest effect sizes for clinical samples in, 186
pairwise comparisons with block design and, 163
pairwise comparisons with block design no time bonus and, 163
reverse rules for, 48
scoring for, 94, 94, 95
start point for, 46
test administration for, 63, 64
timing rules for, 51
Block design no time bonus, pairwise comparisons with BDMC and, 163
Block design process approach, subtest eliminated in WISC-V Integrated, 181
Boston Naming Test (BNT), 6
Boston naming test (Kaplan, E., Goodglass, H., & Weintraub, S. 1983), 6
Boston process approach, 5

Nonexpressive composite scores, 129–130, 130
Nonexpressive crystallized index, mean scores of language disorder children in, 214
Nonexpressive expanded crystallized index (NECI), 127 appropriate use examples for, 145
general verbal information index pairwise comparisons with, 157 mean composite scores for, 200
nonverbal index pairwise comparisons with, 156 reliability coefficients of, 124
standard errors of measurement of, 125
subtest composition of, 130 verbal index pairwise comparisons with, 157
Nonexpressive Fluid-Crystallized Index (NEGf-Gc), 129 full scale IQ correlated with, 150
interpretive strategies with, 141–142
overall ability indicated by, 149 potentially appropriate use with, 135
reliability coefficients of, 124
standard errors of measurement of, 125
subtest composition of, 130
Nonexpressive general verbal information (NEGc-K0), 129
reliability coefficients of, 124
standard errors of measurement of, 125
subtest composition of, 130
Nonexpressive verbal index, subtest composition of, 126
Nonmotor composite scores, 131–132, 132–133
classification accuracy for intellectual disability children with, 206
classification accuracy for intellectual gifted children with, 204
full scale IQ correlated with, 150
full scale IQ pairwise comparisons with, 155
interpretive strategies with, 136
mean composite scores for, 199
mean scores of attention-deficit/hyperactivity disorder children in, 210
mean scores of autism spectrum disorders children in, 217
mean scores of intellectual disability children in, 205
mean scores of intellectual gifted children in, 202
mean scores of language disorder children in, 213
mean scores of traumatic brain injury children in, 211
overall ability indicated by, 149 potentially appropriate use with, 135
reliability coefficients of, 124
standard errors of measurement of, 125
subtest composition of, 130
Nonmotor full scale score (NMFSS), 131–132
classification accuracy for intellectual disability children with, 206
classification accuracy for intellectual gifted children with, 204
full scale IQ correlated with, 150
full scale IQ pairwise comparisons with, 155
interpretive strategies with, 137–138
mean composite scores for, 199
mean scores of attention-deficit/hyperactivity disorder children in, 210
mean scores of autism spectrum disorders children in, 217
mean scores of intellectual disability children in, 205
mean scores of intellectual gifted children in, 202
mean scores of language disorder children in, 213
nonmotor general ability index pairwise comparisons with, 156
overall ability indicated by, 149
potentially appropriate use with, 135
reliability coefficients of, 124
subtest composition of, 132
Nonmotor nonverbal index (NMNVI), 131
classification accuracy for intellectual disability children with, 206
classification accuracy for intellectual gifted children with, 204
full scale IQ correlated with, 150
interpretive strategies with, 140
mean composite scores for, 199
mean scores of autism spectrum disorders children in, 217
mean scores of intellectual disability children in, 205
mean scores of intellectual gifted children in, 202
mean scores of language disorder children in, 213
nonverbal index pairwise comparisons with, 156
overall ability indicated by, 149
potentially appropriate use with, 135
reliability coefficients of, 124
standard errors of measurement of, 125
subtest composition of, 132
Nonmotor visual spatial index (NMVSI), 131
discrepancies between global composite score and, 151, 152
mean composite scores for, 200
mean scores of attention-deficit/hyperactivity disorder children in, 210
mean scores of autism spectrum disorders children in, 217
mean scores of language disorder children in, 213
mean scores of learning disorder in math children in, 208
mean scores of learning disorder in reading children in, 207
primary index scores alternatives with, 144
reliability coefficients of, 124
standard errors of measurement of, 125
subtest composition of, 132
Nonverbal index alternatives to, 140
classification accuracy for intellectual disability children with, 206
classification accuracy for intellectual gifted children with, 204
full scale IQ correlated with, 150
interpretive strategies with, 137–138, 138–139
mean composite scores for, 199
mean scores of attention-deficit/hyperactivity disorder children in, 210
mean scores of autism spectrum disorders children in, 217
mean scores of intellectual disability children in, 205
mean scores of intellectual gifted children in, 202
mean scores of language disorder children in, 213
NECI pairwise comparisons with, 156
nonmotor nonverbal index pairwise comparisons with, 156
overall ability indicated by, 149
verbal index pairwise comparisons with, 156

test structure for, 19–21, 20
two index scores with, 2
validity of, 23–28, 24, 25, 26, 27, 29
Verbal Comprehension subtests of, 2

WISC-V Clinical Use and Interpretation (Weiss, Saklofske, Prifitera, & Holdnack, 2016), 133, 138

WISC-V Integrated. See Wechsler Intelligence Scale for Children-Fifth Edition Integrated

WISC-V Integrated Administration and Scoring Manual and the WISC-V Integrated Technical and Interpretive Manual (Wechsler & Kaplan, 2015), 7–8, 14, 29, 45, 47, 48, 49, 73, 85, 120, 179, 182–184, 186, 190–193

WISC-V Integrated Interpretive Assistant 1.0, 2, 21, 43, 113, 124, 137, 142, 147, 148, 151, 154, 158, 160

WISC-V Technical and Interpretive Manual (Wechsler, 2014), 133, 138, 179

Working memory
attention-deficit/hyperactivity disorder with, 246
learning disorder in mathematics with, 264
WISC-V index score correlations with, 24
WISC-V score group correlations with, 26

Working memory domain
interpretive strategies with, 175
mean performance of language disorder sample on, 185
mean subtest effect sizes for clinical samples in, 186
WISC-V test structure with, 20

Working memory index
mean composite scores for, 201
mean scores of attention-deficit/hyperactivity disorder children in, 210
WISC-V Integrated subtest score groups correlations with, 24

Working memory subtests
common errors in administration of, 82–83
scoring for, 97, 98–99
test administration for, 70–71, 72, 73, 74

Written arithmetic (WA), 11, 13, 17
average reliability coefficients of, 27
behavioral observations for, 70
common errors in administration of, 82
discontinue rules for, 49
domain membership for, 42
g loadings with, 29
mean performance of language disorder sample on, 185
mean scores of traumatic brain injury children in, 211
mean subtest effect sizes for clinical samples in, 186
pairwise comparisons with arithmetic process approach and, 165
reverse rules for, 48
scoring for, 95, 97
start point for, 46
test administration for, 69–70, 70
timing rules for, 51
