Index

Note: page references with suffix ‘f’ represent a Figure, and ‘t’ represents a Table

ABS
catalytic cracking of 78
heteroatoms from 77
pyrolysis of 330–1, 721
acetophenone, from catalytic cracking of PET 166, 167
acicular coke, production of 724
acid catalysts 46, 80–1, 118, 172, 195–6, 211
coprocessing of MWP/HVO blends 218–21
limitations 211
plastics-derived heavy oil cracked by 172–5
polyolefin cracking by 46–54, 82, 83f, 84f, 93f, 118, 195, 386
temperature effects 716
acid-catalyzed hydrolysis, of PET 647–8
acidity of catalysts 173t, 183t, 239
factors affecting 196, 239
measurement of 173, 196
for various catalysts 240t
acrylonitrile–butadiene–styrene copolymers see ABS
activated carbon
production of 552, 574, 657
regeneration of 573
activated carbon catalysts 48, 211
hydrocracking by 216
activated carbon/transition metal catalysts 84, 103f, 149, 211
see also Co-AC catalyst
activation energy calculations 227
degradation of plastics 231t, 617
effect of catalysts 197, 231
gasification reactions 182, 183t
hydrocracking of PE 62f, 63, 64f, 65f, 66
additives 4–5
effect on recycling 5, 14
environmental impact 376
advantages
  catalytic cracking 76–7, 194, 210, 226
  fluidized-bed reactors 135, 210, 436, 444, 547, 627
  free-fall reactors 615, 616, 617
  microwave heating 571, 582, 586
  pyrolysis 384–5, 431, 494, 532–3
  rotary kiln reactors 547, 551, 711
agricultural plastics
  conversion to diesel 412–13
  pyrolysis of 598
air pollution 133, 135, 193, 376, 532
AIST glycolysis process 644, 645f
Akzo fluidized-bed pyrolysis process 438t, 468–9
commercial status 469
Al-MCM-41 catalyst 395
alkyl aromatics
  from catalytic cracking of PE 49, 50, 50f, 51, 52f, 53–4, 76f, 152f
  of PS 54–9, 116
see also toluene
alumina
  catalytic cracking by 147, 148–9, 148t
see also silica–alumina catalysts
aluminium/plastic laminates, pyrolysis of 385, 573
aluminium–zinc composite, catalytic cracking by 96
Amat Ltd 586
American Plastic Council (APC), waste plastics sample 214
Amoco process 438t, 740t
amorphous silica–alumina (ASA) 80–1, 147
HDPE catalytic cracking by 148t
physicochemical properties 147, 240t
see also silica–alumina catalyst
AMRA fluidized-bed pyrolysis process 438t
antioxidants, in fuel oils 400, 402
Arabian crude oils, vacuum residues, properties 365
aromatics
in commercial gasoline 179t, 185f
from catalytic cracking
of mixed waste plastics 236, 236t
of PE 49, 50, 50f, 51, 52f, 53–4, 140, 143f, 145f, 148t, 151–2, 151f
of PS 54–9, 151f
of pyrolytic waxes 213t
from heavy-oil conversion 178f, 179f, 184, 185f
from pyrolysis
of PET 266
of PS 262, 307–8
of PVC 264, 308–9
see also PONA distributions
aromatization reactions 238, 735
Arrhenius equation 227, 228
Arrhenius plots, catalytic cracking of plastics-derived heavy oil 182f
Asia, recycling of PET bottles 642t
asphaltenes 365
amount in vacuum residues 365t
removal from distillation residues 366
Association of Plastics Manufacturers in Europe (APME) 36, 38
Ateklab free-fall reactor
experimental procedure 611–12
LDPE pyrolysis using 613–17
PS pyrolysis using 617–20
set-up 610–11
Atkinson–McCaffrey kinetic model 228
attrition index, catalysts 718–19
auger kiln reactors 515, 522, 550
see also Conrad process
autoclave reactors 16t, 117, 144, 195
automobile shredder residue (ASR) 33–4
collection of 26
composition 557
feedstock recovery from 34
pyrolysis 329–31
fixed-bed 441t
fluidized-bed 440t, 466, 469, 470
fuels produced 278t, 279t, 331
rotary kiln 442t, 443t, 557
see also shredder light fractions
base-catalyzed hydrolysis, of PET 648–9
BASF process 17, 27–8, 122, 368, 369f, 439t, 740t, 741, 748
batch reactors
catalytic cracking in 86, 195
pyrolysis in 289t, 290t, 393–4, 710–11
Battelle fluidized-bed pyrolysis process 438t, 468
BC-Pyrocom rotary kiln 555t, 558–9
Beijing Roy Environment Technology Company see Royco process
Belgium, packaging waste data 33t
benzene
from catalytic cracking
of PE 76f
of PS 54, 55f, 56, 59, 116
from pyrolysis
of PET 266
of PS 618, 619f
of PVC 264
benzoic acid, from PET cracking 166, 167, 329
Bergius Pier hydrogenation technology 30, 118
Berlin Consult see BC-Pyrocom rotary kiln
beta zeolite catalyst
cracking of olefins 149, 495
physicochemical properties 80t, 240t
β-scission
in catalytic cracking 51, 57–8, 75, 115, 211, 237, 243
in pyrolysis 75, 320, 715f
bifunctional catalysts 132–3, 214, 241–3
reaction mechanisms 132–3, 214
biomass
coa-gasification with plastics 120
gasification of 438t, 468
pyrolysis of 274, 608
bis-2-hydroxyethylene terephthalate
formation of 643, 644
polycondensation into PET 644
bituminous coal, devolatilization of 606, 607
BKMI rotary kiln process 554t
blast furnaces, plastics waste used in 8, 20, 23, 30, 37, 368–9, 669t, 704
Blowdec depolymerization process 429–30
boiling point distributions, liquid products 203–4, 352f, 376
bond energies

INDEX

carbon–carbon bond 596, 635
carbon–fluorine bond 635
carbon–hydrogen bond 635

BP fluidized-bed pyrolysis process 28–30, 122, 438t, 467–8, 738, 739t
economic considerations 30, 468
operating experience 467–8
preliminary experiments in Hamburg 476, 486t
products 29, 122, 468

typical input specification 392t

British Gas/Lurgi slagging gasifier 277
brominated fire/flame retardant materials
high-impact polystyrene see HIPS-Br
thermal degradation of 339–40, 558, 721

Brönsted acid sites on catalysts 51, 76, 81, 147, 196, 219
bubbling fluidized beds 436
comparison with other reactor types
446–9t
gasification in 276, 438t
pyrolysis in 394, 438t, 440t, 467
effect of process variables on products 458–61t
of mixed plastics 458t, 459t, 464–6
zones 452–3, 453f
butadiene rubber, pyrolysis products 333
by-products
plastics pyrolysis 14–15
coke formation 15
effects of additives 14
effects of hetero-atoms 14
secondary reactions 15

C-NP gram, pyrolysis oils 687f
calcium carbonate carbon composite (Ca-C)
sorbent
adsorption capacity 511t
effect of inlet HCl concentration 512–13
effect of particle size 513, 513f, 514t
effect of temperature 511–12, 512f
dechlorination of PVC/PP/PE/PS mixed
plastics by 514–18, 556
dehalogenation of PVC/PP/PE/PS/HIPS-Br
mixed plastics by 518–21
effect of temperature 511–12, 512f
HCl reaction profile 510f
physical properties 496
preparation of 496
calcium carbonate/hydroxide/oxide,
dehalogenation by 29, 119, 123, 212, 390–1, 397, 467, 482, 540, 541t, 556, 673, 682, 741
calcium hydroxide, effect on pyrolysis of PET 390, 655, 656f, 693
calcium ion-exchanged X-type zeolite catalyst
see CaX catalyst
calorific (heating) value
coal 734
fuel oils 155t, 305–6, 305t, 533t
plastics 710
pyrolysis oils 155t, 304t, 429t, 674t
carbenium/carbonium ion formation, in
catalytic cracking 51–3, 76, 114, 132, 211, 228, 230, 735
carbon, as microwave absorbent 572
carbon black
as microwave absorbent 574, 584
recovery from tyres 466, 490
carbon–carbon bond energy 635
carbon–fluorine bond energy 635
carbon–hydrogen bond energy 635
carbon nanotubes 464, 465f
carbon number distribution
catalytically cracked plastics 384f, 505f, 507f
plastics-derived heavy oils 172f, 687f
pyrolysis products 384f, 504f, 505f, 507, 509f, 521f, 523f, 524f, 687f
after catalytic cracking 186f, 188
carbon residues, in fuels 155–6, 155t, 305t, 399
carbon-supported metal catalysts 84, 103, 149

carbonization 251
predictive model 271–2
process parameters 253t, 287t

degradation
catalysts 79–85, 146–9, 239–44, 715–19, 746–7
acidity 173t, 183t, 239
factors affecting 196, 239
listed for various catalysts 240t
measurement of 173, 196
catalysts (continued)

activity  404–5, 716

loss in fluid catalytic cracking  228

bifunctional  132–3, 241–3

Brönsted acid sites  76, 81, 147, 196, 219

chemical properties  146–7, 173t, 183t, 716–17

alumina content  717

hydrogen factor  716–17

rare earth content  717

sodium content  717

deactivation by coke deposits  95, 123, 144, 174, 218t, 404, 746

disposable/throwaway  122

effect on product properties  116, 141–4, 241t

effect on pyrolysis temperature  231, 710, 716

effect on pyrolysis temperature  231, 116

external  406

heterogeneous  79–85

homogeneous  79

Lewis acid sites  76, 81, 147, 196, 219

micro activity test for  716

monofunctional  239–41

physicochemical properties  80t, 147, 173t, 183t, 240t, 717–19

apparent bulk density  717

attrition index  718–19

loss on ignition  718

particle size distribution  717–18

catalytic cracking  10, 43–247, 736–7

advantages  76–7, 194, 210, 226

compared with thermal cracking  74–5, 116, 118, 133, 194, 209–10, 383–6

direct process  97–9

effect of operational variables  92–6, 117, 118

catalyst concentration  94–5, 196–8, 199f, 233–4

plastics waste composition  95–6

temperature  93–4, 117

time  95

industrial processes  418–22, 438t, 440t, 441t, 741–4

laboratory experiments listed  730t

limitations  74, 77, 97, 129, 144, 226, 386

liquid-phase reactions  146

mass balance  731, 732t

multistage processes  97–9

PE  45–6, 46–54, 75–6, 79–85, 93, 94, 139–41, 140–9, 746t

PET  78, 233t, 416–17, 655–7

plastics derived heavy oil  172–88

plastics suitable for  77–8, 113, 416

PP  48–59, 78–9, 130, 139t, 143f, 148t, 212

PS  46, 54–9, 77, 116, 232t, 233t, 406–7, 746t

PVC  233t, 746t, 748

reaction mechanisms  51–3, 76, 114–15, 211, 228, 230–8, 422

solvents used  103

temperature effects  93–4, 139–41, 231, 404, 745, 746t

in Thermofuel process  408, 410f, 411

vapor-phase reactions  146

catalytic dehalogenation  96, 407, 420, 496, 505–8, 563

catalytic isomerization dewaxing  398, 417

catalytic pyrolysis

early research  194–5

in fluidized-bed reactors  445t

further research required  205

HDPE  140–53, 232t, 233t, 495

effect of catalysts  141–4

effect of PS addition  149–53

LDPE/EVA mixture  394–5

NanoFuel/Polymer-Engineering process  418–22

suitability of various reactor types  448t

various studies listed  232–3t

catalytic reforming  748–50

economic evaluation of (possible) waste plastics processing plant 377–8
waste plastics data 377
SBA-15 catalyst 81
SBR
fluidized-bed pyrolysis of 460t
pyrolysis products 333
scale-up
pyrolysis processes 272
comparison of various reactor types 449t
Schwarze Pumpe gasification plant 276, 277
scraped surface heat exchangers 392
scraped-wall reactors 121, 414
screw extruder reactors 15–16, 16t, 91, 120–1
screw kiln reactors 91, 92f, 102, 195, 375, 542–4, 552
effect of temperature on LDPE degradation 542, 543t
thermal compared with catalytic degradation of LDPE 144, 146f, 544, 545t
screw pyrolysers 273–4, 712, 713f
scrubbers, pyrolysis plant 397
secondary recycling 111, 252, 286, 363
semi-batch reactors, catalytic cracking in 86, 87f, 93, 94, 123, 195
semi-continuous pyrolysis reactors 375
sewage sludge
microwave pyrolysis of 574, 583
pyrolysis of 439t, 440t, 441t, 443t, 471
shaft reactors
gasification in 276
pyrolysis in 16, 16t
Shell gasification process 23, 32, 122
shift factor (catalytic cracking) 228
shredder light fractions
pyrolysis of 552, 554t, 557
see also automobile shredder residue (ASR)
side-group elimination, in pyrolysis 501f, 714, 715f
Siemens–KWU rotary kiln process 551–2, 554t, 557
silica–alumina catalysts 80–1
deactivation by coke deposits 95, 404
dehlorination by 721
plastics-derived heavy oils 174f, 174t
polyolefins 45, 139, 148–9, 404, 406, 459t, 495
PP/PVC mixtures 504, 505f
properties 173t
PS 46, 54, 55f, 406
silica–alumina/transition metal catalysts 241–2
simulated distillation, boiling point curves 349f, 352f, 376
Slovakia, Blowdec depolymerization process 429–30
slow pyrolysis
compared with flash pyrolysis 253t, 287t, 617

dynamic method 254
characteristic parameters 257t, 260t, 263t, 267t
isothermal–static method 254
of mixed plastics waste 268–70
of PE 254t, 256–8
of PET 266–7
pilot-plant scale-up 272
of PP 259–61
predictive carbonization model 271–2
process parameters 253t, 287t, 605
of PS 262–3, 264f
of PVC 264–5
pyrolysis technologies 272–3, 273–4
Smuda process
advantages 416, 417
agitator speed 396, 416, 417
catalysts 416
coke removal in 393, 417
compared with Thermofuel process 418
distillation column 416
fuels produced by 414, 418
hydrotreating stage 398
plastics suitable for 416
reflux return in 417
shortcomings 416, 417–18
stirred-tank reactor 415f
sodium carbonate, dechlorination by 349, 397, 741, 748
solid acid catalysts 46, 80–1, 118, 172, 195–6, 211
PP/PVC mixture degraded by 505, 506t, 507f
see also silica–alumina catalyst
solid alkalis, as catalysts 243–4
solvents, coprocessing with plastics 103
solvolysis, of PET 643–9
sorting of plastics waste 26, 252
spouted-bed reactors 90–1, 394
steam
as carrier gas 88, 162
effect on catalytic cracking of plastics-derived heavy oil 183–8
effect on fluidized-bed pyrolysis of polyolefins 483, 486t, 742
effect on polyester pyrolysis 163–72, 183
steam gasification
of PE 258
of PP 261
syngas produced using 276, 279
stirred heat-medium-particles reactors 394
bench-scale reactor 168–72
pilot plant 188–90
stirred-tank reactors 16, 16t, 393, 395, 408f, 415f, 427, 672
styrene
as diesel pour point depressant 401
from catalytic cracking of PS 55f, 56, 116, 151–2, 243
from pyrolysis of PS 90, 123, 262, 301, 302, 389, 464, 618, 619f, 635, 636f
from pyrolysis of SBR 333, 460f
styrene–butadiene rubber see SBR
styrene copolymers
pyrolysis of
fuel properties of oils produced 304f
oil/wax products, chemical feedstock potential 307
product distribution 329–31
sublimate compounds 161, 165, 390, 693
sulfur content
fuel oils 155f, 156, 305f
pyrolysis oils and distillates 304f, 429f, 674f, 685f, 698f
sulfur oxides emissions, Thermofuel diesel 413
Sumitomo Metal Industries gasification system 34
supercritical water
pyrolysis in 737, 748
rubber waste treated by 35
superheated steam, polyolefin pyrolysis using 599, 600, 603
supply logistics, plastics waste collection and recycling 25–6
syncrude, production of 31, 369, 377, 537
syngas (synthesis gas)
heating values 276, 279
production of 8, 34, 74, 120, 276, 278, 367
syringes, fluidized-bed pyrolysis of 483f
take-back schemes 6, 33, 34f
Takuma SBV process 443f
tank reactors 16, 16t, 393
tar formation, in gasification 276
Teijin Fiber Ltd, PET recycling by 37, 647
television circuit boards
pyrolysis of 562f
see also electrical/electronic equipment
waste
temperature effects
catalytic cracking 93–4, 139–41, 231, 404, 745, 746f
Conrad process 539f
dechlorination capacity of Ca-C sorbent 511–12, 512f
heavy-oil conversion 176–9
pyrolysis 8–9, 9f, 13t, 117t, 135, 231, 233, 719, 745
PE 255, 255f, 256f, 257t, 258, 258f
in rotary kiln reactors 544–6
temperature profile, comparison of pyrolysis reactor types 446t
temperature range, comparison of pyrolysis reactor types 446t
temperature-programmed desorption (TPD) method, acidity of catalysts measured by 173, 196
terephthalic acid
catalytic cracking of 165, 166–7
as PET monomer feedstock 164, 643
reaction with ethylene glycol 643
recovery from PET 164, 389, 464, 540, 647–9, 658–9
sublimation of 161, 165, 390, 693
tertiary recycling 111, 363
economic considerations 124
see also catalytic cracking; feedstock recycling; pyrolysis
tetrafluoroethylene, from PTFE pyrolysis 636, 637, 638f
Tetrapak material, pyrolysis of 573, 580–1
Texaco gasification process 23, 32, 277–8, 367, 368f
thermal analysis 7
thermal conductivity, plastics 21
thermal cracking 225, 385–6, 736
compared with catalytic cracking 74–7, 116, 118, 133, 194, 383–6, 736–7
disadvantages 209–10, 385
features 736
reaction mechanisms 22, 75, 113–14, 130–2, 228, 456–7, 734–5
temperature effects 745
various studies listed 231f, 458–61f
see also pyrolysis
thermal dehalogenation 24, 39, 99, 117, 210, 211, 217
thermal recycling 6
thermocatalytic degradation 225
see also catalytic pyrolysis
Thermofuel process 407–14, 724
agitator speed 396
basic steps 407–8
catalytic converter/reaction tower 408, 410f, 411, 724
coke removal in 393, 414
compared with other processes 418, 422
diesel fuel produced by 411f, 413
flow diagram 409f
plants in Japan 411–12
pyrolysis chamber 407, 408f, 413
emissions from 414
thermogravimetric analysis (TGA) 7
catalytic cracking studied by 85–6, 197f, 199, 226
curves
PET in nitrogen and steam atmospheres 163f
various plastics in nitrogen and steam atmospheres 164, 165f
limitations 199
microwave pyrolysis apparatus 575–6
thermolysis see pyrolysis
thermomechanical testing 7
thermoplastics
chemical structure 294f
meaning of term 5, 187, 364
see also HDPE; LDPE; nylons; PE; PET; PP; PS; PVC
thermosets
chemical structure 294f
meaning of term 5, 287
pyrolysis of 290t, 291
oil/wax products
chemical feedstock potential 309
FT-IR spectra 298, 299f, 300
see also epoxy resin; phenolic resin
time factors
catalytic cracking 153, 176
heavy-oil conversion 176f, 179, 179f
pyrolysis 9, 9t, 134
see also residence time
tipping fees
in economic appraisal 350, 359
see also gate fees
tire see tyre...
toluene
from pyrolysis
of PET 266
of PS 619f
of PVC 264
toothpaste tube laminate, microwave pyrolysis of 573, 578f, 580–1, 581f
Toshiba pyrolysis processes 443t, 678, 748
TPD see temperature-programmed desorption
