Contents

1 Introduction to Optimization  1
  1.1 Introduction  1
  1.2 Historical Development  3
  1.3 Engineering Applications of Optimization  5
  1.4 Statement of an Optimization Problem  6
    1.4.1 Design Vector  6
    1.4.2 Design Constraints  7
    1.4.3 Constraint Surface  8
    1.4.4 Objective Function  9
    1.4.5 Objective Function Surfaces  9
  1.5 Classification of Optimization Problems  14
    1.5.1 Classification Based on the Existence of Constraints  14
    1.5.2 Classification Based on the Nature of the Design Variables  15
    1.5.3 Classification Based on the Physical Structure of the Problem  16
    1.5.4 Classification Based on the Nature of the Equations Involved  19
    1.5.5 Classification Based on the Permissible Values of the Design Variables  28
    1.5.6 Classification Based on the Deterministic Nature of the Variables  29
    1.5.7 Classification Based on the Separability of the Functions  30
    1.5.8 Classification Based on the Number of Objective Functions  32
  1.6 Optimization Techniques  35
  1.7 Engineering Optimization Literature  35
  1.8 Solution of Optimization Problems Using MATLAB  36
References and Bibliography  39
Review Questions  45
Problems  46

2 Classical Optimization Techniques  63
  2.1 Introduction  63
  2.2 Single-Variable Optimization  63
  2.3 Multivariable Optimization with No Constraints  68
    2.3.1 Semidefinite Case  73
    2.3.2 Saddle Point  73
  2.4 Multivariable Optimization with Equality Constraints  75
    2.4.1 Solution by Direct Substitution  76
    2.4.2 Solution by the Method of Constrained Variation  77
    2.4.3 Solution by the Method of Lagrange Multipliers  85
3 Linear Programming I: Simplex Method 119

3.1 Introduction 119
3.2 Applications of Linear Programming 120
3.3 Standard Form of a Linear Programming Problem 122
3.4 Geometry of Linear Programming Problems 124
3.5 Definitions and Theorems 127
3.6 Solution of a System of Linear Simultaneous Equations 133
3.7 Pivotal Reduction of a General System of Equations 135
3.8 Motivation of the Simplex Method 138
3.9 Simplex Algorithm 139
   3.9.1 Identifying an Optimal Point 140
   3.9.2 Improving a Nonoptimal Basic Feasible Solution 141
3.10 Two Phases of the Simplex Method 150
3.11 MATLAB Solution of LP Problems 156
References and Bibliography 158
Review Questions 158
Problems 160

4 Linear Programming II: Additional Topics and Extensions 177

4.1 Introduction 177
4.2 Revised Simplex Method 177
4.3 Duality in Linear Programming 192
   4.3.1 Symmetric Primal–Dual Relations 192
   4.3.2 General Primal–Dual Relations 193
   4.3.3 Primal–Dual Relations When the Primal Is in Standard Form 193
   4.3.4 Duality Theorems 195
   4.3.5 Dual Simplex Method 195
4.4 Decomposition Principle 200
4.5 Sensitivity or Postoptimality Analysis 207
   4.5.1 Changes in the Right-Hand-Side Constants $b_i$ 208
   4.5.2 Changes in the Cost Coefficients $c_j$ 212
   4.5.3 Addition of New Variables 214
   4.5.4 Changes in the Constraint Coefficients $a_{ij}$ 215
   4.5.5 Addition of Constraints 218
4.6 Transportation Problem 220
5 Nonlinear Programming I: One-Dimensional Minimization Methods 248

5.1 Introduction 248
5.2 Unimodal Function 253

ELIMINATION METHODS 254

5.3 Unrestricted Search 254
5.3.1 Search with Fixed Step Size 254
5.3.2 Search with Accelerated Step Size 255

5.4 Exhaustive Search 256
5.5 Dichotomous Search 257
5.6 Interval Halving Method 260
5.7 Fibonacci Method 263
5.8 Golden Section Method 267
5.9 Comparison of Elimination Methods 271

INTERPOLATION METHODS 271

5.10 Quadratic Interpolation Method 273
5.11 Cubic Interpolation Method 280
5.12 Direct Root Methods 286
5.12.1 Newton Method 286
5.12.2 Quasi-Newton Method 288
5.12.3 Secant Method 290

5.13 Practical Considerations 293
5.13.1 How to Make the Methods Efficient and More Reliable 293
5.13.2 Implementation in Multivariable Optimization Problems 293
5.13.3 Comparison of Methods 294

5.14 MATLAB Solution of One-Dimensional Minimization Problems 294

References and Bibliography 295
Review Questions 295
Problems 296
6 Nonlinear Programming II: Unconstrained Optimization Techniques 301

6.1 Introduction 301
  6.1.1 Classification of Unconstrained Minimization Methods 304
  6.1.2 General Approach 305
  6.1.3 Rate of Convergence 305
  6.1.4 Scaling of Design Variables 305

DIRECT SEARCH METHODS 309

6.2 Random Search Methods 309
  6.2.1 Random Jumping Method 311
  6.2.2 Random Walk Method 312
  6.2.3 Random Walk Method with Direction Exploitation 313
  6.2.4 Advantages of Random Search Methods 314

6.3 Grid Search Method 314

6.4 Univariate Method 315

6.5 Pattern Directions 318

6.6 Powell’s Method 319
  6.6.1 Conjugate Directions 319
  6.6.2 Algorithm 323

6.7 Simplex Method 328
  6.7.1 Reflection 328
  6.7.2 Expansion 331
  6.7.3 Contraction 332

INDIRECT SEARCH (DESCENT) METHODS 335

6.8 Gradient of a Function 335
  6.8.1 Evaluation of the Gradient 337
  6.8.2 Rate of Change of a Function along a Direction 338

6.9 Steepest Descent (Cauchy) Method 339

6.10 Conjugate Gradient (Fletcher–Reeves) Method 341
  6.10.1 Development of the Fletcher–Reeves Method 342
  6.10.2 Fletcher–Reeves Method 343

6.11 Newton’s Method 345

6.12 Marquardt Method 348

6.13 Quasi-Newton Methods 350
  6.13.1 Rank 1 Updates 351
  6.13.2 Rank 2 Updates 352

6.14 Davidon–Fletcher–Powell Method 354

6.15 Broyden–Fletcher–Goldfarb–Shanno Method 360

6.16 Test Functions 363

6.17 MATLAB Solution of Unconstrained Optimization Problems 365

References and Bibliography 366

Review Questions 368

Problems 370
7 Nonlinear Programming III: Constrained Optimization Techniques 380

7.1 Introduction 380
7.2 Characteristics of a Constrained Problem 380

DIRECT METHODS 383

7.3 Random Search Methods 383
7.4 Complex Method 384
7.5 Sequential Linear Programming 387
7.6 Basic Approach in the Methods of Feasible Directions 393
7.7 Zoutendijk’s Method of Feasible Directions 394
   7.7.1 Direction-Finding Problem 395
   7.7.2 Determination of Step Length 398
   7.7.3 Termination Criteria 401
7.8 Rosen’s Gradient Projection Method 404
   7.8.1 Determination of Step Length 407
7.9 Generalized Reduced Gradient Method 412
7.10 Sequential Quadratic Programming 422
   7.10.1 Derivation 422
   7.10.2 Solution Procedure 425

INDIRECT METHODS 428

7.11 Transformation Techniques 428
7.12 Basic Approach of the Penalty Function Method 430
7.13 Interior Penalty Function Method 432
7.14 Convex Programming Problem 442
7.15 Exterior Penalty Function Method 443
7.16 Extrapolation Techniques in the Interior Penalty Function Method 447
   7.16.1 Extrapolation of the Design Vector X 448
   7.16.2 Extrapolation of the Function f 450
7.17 Extended Interior Penalty Function Methods 451
   7.17.1 Linear Extended Penalty Function Method 451
   7.17.2 Quadratic Extended Penalty Function Method 452
7.18 Penalty Function Method for Problems with Mixed Equality and Inequality
   Constraints 453
   7.18.1 Interior Penalty Function Method 454
   7.18.2 Exterior Penalty Function Method 455
7.19 Penalty Function Method for Parametric Constraints 456
   7.19.1 Parametric Constraint 456
   7.19.2 Handling Parametric Constraints 457
7.20 Augmented Lagrange Multiplier Method 459
   7.20.1 Equality-Constrained Problems 459
   7.20.2 Inequality-Constrained Problems 462
   7.20.3 Mixed Equality–Inequality-Constrained Problems 463
Contents

7.21 Checking the Convergence of Constrained Optimization Problems 464
  7.21.1 Perturbing the Design Vector 465
  7.21.2 Testing the Kuhn–Tucker Conditions 465

7.22 Test Problems 467
  7.22.1 Design of a Three-Bar Truss 467
  7.22.2 Design of a Twenty-Five-Bar Space Truss 468
  7.22.3 Welded Beam Design 470
  7.22.4 Speed Reducer (Gear Train) Design 472
  7.22.5 Heat Exchanger Design 473

7.23 MATLAB Solution of Constrained Optimization Problems 474

9 Dynamic Programming 544

9.1 Introduction 544
9.2 Multistage Decision Processes 545
  9.2.1 Definition and Examples 545
  9.2.2 Representation of a Multistage Decision Process 546
  9.2.3 Conversion of a Nonserial System to a Serial System 548
  9.2.4 Types of Multistage Decision Problems 548
9.3 Concept of Suboptimization and Principle of Optimality 549
9.4 Computational Procedure in Dynamic Programming 553
9.5 Example Illustrating the Calculus Method of Solution  555
9.6 Example Illustrating the Tabular Method of Solution  560
9.7 Conversion of a Final Value Problem into an Initial Value Problem  566
9.8 Linear Programming as a Case of Dynamic Programming  569
9.9 Continuous Dynamic Programming  573
9.10 Additional Applications  576
   9.10.1 Design of Continuous Beams  576
   9.10.2 Optimal Layout (Geometry) of a Truss  577
   9.10.3 Optimal Design of a Gear Train  579
   9.10.4 Design of a Minimum-Cost Drainage System  579
