Index

Note: Where index items are located within tables or figures, page numbers in **bold** denote tables, and numbers in *italics* denote figures

**a**

activity limitations, 13, 14, 22, 38
affordance, 98
ageing, 133, 168, 177–178, 185
agnosia
 apperceptive, 101, 106, 110
  associative, 101, 106, 110
  prosopagnosia, 35, 105, 108
  visual, 101–102
amnesia, 124, 131–132, 138–140, 144
apraxia see also gestures
  error types, 151–152, **158**, 161
  ideational, 157, 161
  ideomotor, 157, 161
arousal, 67, 72–73, 75–76, 78–79, 84
assessment
  bottom up, 23, 25, 54
  impairment level, 23, 28, 46
  initial, 19–22, 28, 29
  interview, 19–21, 28
  non-standardised, 26–27
  observation, 19, 21–22, 28
  occupation-focused, 23–24, 191
  standardised, 19, 20, 26–27, 28, 47
  tools, 19, 23, 27, 28, 29
  top down, 23, 34
astereognosis see tactile agnosia
attention
  auditory, 72–74
  capacity, 56, 73–74, 78–79
divided, 72, 77
goal-directed, 80
models of, 78–80
selective, 73–75
sharing, 8, 72
shifting, 8, 71, 72, 76
sustained, 13, 56, 75–76, 81
visual, 74–75
attentional deficits, 81–82
awareness see metacognition

**b**

biopsychosocial, 7
body image, 114
body scheme, disorders, somatognosia, 114–116
brain imaging, 59–60
brain stem
  midbrain, 61
  nuclei, 93
Broca’s area, 61, 127
Brodmann’s areas, 61, 63

**c**

Canadian Model of Occupational Performance and Engagement (CMOP-E), 18
cerebral hemispheres, 61, 64
  lateralisation, R/L, 66–67
  lobes, 61–66
chaining, 43
cingulate gyrus, 65, 66
cognition
  cognitive demands, 21, 39–41, 54–55
cognitive impairment, 4, 13–14 see also mild cognitive impairment
cognitive system, 67–68
definition of, 3–4
computed tomography (CT scan), 59 see also brain imaging
computer modelling, 59
confabulation, 131, 140
constructional ability, 116
contextual factors, 7, 40
corpus callosum, 61, 65
cueing, 42–43, 132
d
depth perception, 95
diencephalon, 139
dissociation, 58
double dissociation, 98
divided attention see attention
dysexecutive syndrome see executive dysfunction
e
emotion, 68, 150, 166, 170
errorless learning, 43, 143
executive dysfunction, 168, 170–172
even tacular functions
  content scheduling, 169–170
  inhibition, 166, 174
  initiation, 166, 174
  intentionality, 167
  supervisory attention system, 127, 168–169
extinction, 118
eye movements see visual functions
f
face recognition, 103–104, 105, 107
feedback, 44–45, 143
  extrinsic, 44–45
  intrinsic, 44–45
frailty, 180–183
frameworks, 8–10 see also International Classification of Functioning, Disability and Health
  occupational therapy practice, 7, 10–11
  relationships of components, 14
  frontal lobe, 62–63, 64, 131, 167
  primary motor area, 62, 65
  supplementary motor area, 65, 93
g
gestures, 149–50
  imitation of, 151–152, 153
  intransitive, 151–152
  pantomime of, 151–152, 153, 154
  transitive, 151–152
goal-setting, 167, 170
h
habits, 12, 37, 57
health and safety, 35
health promotion, 188, 190
hemianopia, 92
hemiplegia, 67
hippocampus, 65, 66, 139
i
imaging see brain imaging
impairments, definition of, 13–14, 67
insight see metacognition
International Classification of Functioning, Disability and Health (ICF), 6–11
  activity (limitations), 13–14
  body functions and structures, 7, 13, 67
  capacity, 6, 11
  contexts, 11, 12
  environmental factors, 7
  participation (restrictions), 7, 8, 27, 28
  performance, 6, 11
  personal factors, 7, 11
  use in occupational therapy, 8–10
intervention, approaches to, 38, 44, 48
  adaptive, 24, 26, 38–40, 109
  client centred, 18, 27, 40
  functional, 38, 40
  remedial, 38–40, 109
intervention, methods of,
  behaviourial, 42–44
  chaining, 43
cueing, 42
  grading, 45
  shaping, 42
knowledge of results, 44–45
Korsakoff’s syndrome, 139
learning
  errorless, 43
  facilitators and barriers, 41
limbic system, 66
lived experience of
  apraxia, 155
  attentional deficits, 82
  cognitive impairments, 4
  executive dysfunction, 172–173
  memory impairment, 123–124
  neglect, 117
long-term memory (LTM), 128–132
  autobiographical, 131
  declarative, 128–129
  episodic, 129–130
  procedural, 131–132
  prospective, 133–134
  semantic, 129–130
magnetic resonance imaging (MRI), 60
making every contact count (MECC), 188–189
memory processes, 134–138
  levels, 135–136
  registration, 135
  retention, 135
  retrieval, 135
  schema see schema theory
metabolic syndrome, 181, 186
metacognition (awareness, insight), 35, 171, 172
metamemory, 132–134
mild cognitive impairment (MCI), 179, 180
occupational therapy practice framework (OTPF), 9, 12, 17–18
  activity demands, 9, 12–13
  occupational performance, 36–38
  performance patterns, 36, 37
  performance skills, 12
  rituals, 36, 37, 38
  roles, 12, 36, 37
  routines, 12, 37, 38, 172
occupational therapy, role of, 5
occupation, definition of, 5
optic aphasia, 100
optic ataxia, 101
outcome measurement/measures, 46–48
parallel distributed processing (PDP), 59
parietal lobe, 63, 64, 100, 152–153
  somatosensory area, 65
participation restrictions see International Classification of Functioning, Disability and Health
performance objectives, 36, 37
perseveration, 158
phonological loop, 126
positron emission tomography (PET), 59–60
practice, patterns of, 44
praxis, models of, 152–154
  neuroanatomical correlates, 152–153
pre-motor area see frontal lobe
pre-motor neglect, 119
prosopagnosia, 35, 105, 108
pursuit eye movements, 93
route finding see topographical orientation
saccades, 93
schema, 54, 170, 172
  contention scheduling, 169, 170
  theory, 136–137, 144
selective attention, 73–75
sensory neglect, 118
shaping, 42
sharing attention, 8, 72
shifting attention, 8, 71, 72, 76
short-term memory (STM), 124–125
  verbal, 124–125, 138 see also phonological loop
  visual, 125, 138 see also visuo-spatial sketchpad
somatognosia see body scheme
source monitoring, 133–134
stereognosis see tactile gnosis
strategy training, 43–44
sulcus
  calcarine, 65, 92
  central, 64
  lateral, 66
supervisory attention system (SAS), 127, 168–169
supplementary motor area see frontal lobe

†
tactile agnosia, astereognosis, 106–108
tactile agnosia, stereognosis, 106
teamworking, 34–35
temporal lobe, 64, 66, 139
  medial temporal lobe, 65, 139
thalamus, 65, 66
therapeutic approaches, 38–40
top-down processing, 54–55
topographical disorientation, 35
topographical memory, 12
topographical orientation, 68
transcranial magnetic stimulation TMS, 60, 98

V
viewer-centred representation, 98, 99
vigilance, 72, 75–76 see also attention, sustained
visual agnosia, 101–106, 121 see also agnosia
visual functions, basic, 90–93
  acuity, 90
  eye movements, 92–93
  visual field, 91–92
visual neglect, 118
visual perception, basic, 94
  colour, 94
  depth, 95–96
  figure ground, 94–96, 95, 96
  motion, 96–98
  object recognition, 98–100, 99
  perceptual (form) constancy, 96, 97
visuo-spatial sketchpad, 126

W
Wernicke’s area, 65, 66
‘what’ and ‘where’ pathways, 100, 100–101
working memory, 125–128
  central executive, 127
  episodic buffer, 126–127
  phonological loop, 126
  visuospatial sketch pad, 126
