## Contents

**List of Contributors**  xiii  
**Preface**  xvii  

1  **Modulation Instability, Four-Wave Mixing and their Applications**  1  
*Tobias Hansson, Alessandro Tonello, Stefano Trillo, and Stefan Wabnitz*

1.1  Introduction  1  
1.2  Modulation Instability  2  
1.2.1  Linear and Nonlinear Theory of MI  2  
1.2.2  Polarization MI (PMI) in Birefringent Fibers  7  
1.2.3  Collective MI of Four-Wave-Mixing  9  
1.2.4  Induced MI Dynamics, Rogue Waves, and Optimal Parametric Amplification  11  
1.2.5  High-Order Induced MI  13  
1.2.6  MI Recurrence Break-Up and Noise  14  
1.3  Four-Wave Mixing Dynamics  17  
1.3.1  FWM Processes with Two Pumps  17  
1.3.2  Bragg Scattering FWM  18  
1.3.3  Applications of BS-FWM to Quantum Frequency Conversion  20  
1.4  Fiber Cavity MI and FWM  20  
1.4.1  Dynamics of MI in a Passive Fiber Cavity  20  
1.4.2  Parametric Resonances and Period Doubling Phenomena  23  
1.4.3  FWM in a Fiber Cavity for Optical Buffer Applications  25  
References  27  

2  **Phase-Sensitive Amplification and Regeneration**  35  
*Francesca Parmigiani*

2.1  Introduction to Phase-Sensitive Amplifiers  35  
2.2  Operation Principles and Realization of Phase-Sensitive Parametric Devices  36  
2.3  One-Mode Parametric Processes  40  
2.4  Two-Mode Parametric Processes  54  
2.5  Four-Mode Parametric Processes  56  
2.6  Conclusion  58  
Acknowledgments  59  
References  60
### Contents

3  Novel Nonlinear Optical Phenomena in Gas-Filled Hollow-Core Photonic Crystal Fibers  65  
   Mohammed F. Saleh and Fabio Biancalana
   3.1 Introduction   65 
   3.2 Nonlinear Pulse Propagation in Guided Kerr Media   66 
   3.3 Ionization Effects in Gas-Filled HC-PCFs   67 
   3.3.1 Short Pulse Evolution   68 
   3.3.2 Long-Pulse Evolution   72 
   3.4 Raman Effects in Gas-Filled HC-PCFs   76 
   3.4.1 Density Matrix Theory   76 
   3.4.2 Strong Probe Evolution   82 
   3.5 Interplay Between Ionization and Raman Effects in Gas-Filled HC-PCFs   85 
   3.6 Conclusion   89 
   Acknowledgments   89 
   References   89

4  Modulation Instability in Periodically Modulated Fibers  95  
   Arnaud Mussot, Matteo Conforti, and Alexandre Kudlinski
   4.1 Introduction   95 
   4.2 Basic Theory of Modulation Instability in Periodically Modulated Waveguides   96 
   4.2.1 Piecewise Constant Dispersion   100 
   4.3 Fabrication of Periodically Modulated Photonic Crystal Fibers   101 
   4.3.1 Fabrication Principles   101 
   4.3.2 Typical Example   101 
   4.4 Experimental Results   104 
   4.4.1 Experimental Setup   104 
   4.4.2 First Observation of Multiple Simultaneous MI Side Bands in Periodically Modulated Fibers   104 
   4.4.3 Impact of the Curvature of the Dispersion   105 
   4.4.4 Other Modulation Formats   107 
   4.5 Conclusion   111 
   Acknowledgments   111 
   References   111

5  Pulse Generation and Shaping Using Fiber Nonlinearities  115  
   Christophe Finot and Sonia Boscolo
   5.1 Introduction   115 
   5.2 Picosecond Pulse Propagation in Optical Fibers   116 
   5.3 Pulse Compression and Ultrahigh-Repetition-Rate Pulse Train Generation   117 
   5.3.1 Pulse Compression   117 
   5.3.2 High-Repetition-Rate Sources   121 
   5.4 Generation of Specialized Temporal Waveforms   124 
   5.4.1 Pulse Evolution in the Normal Regime of Dispersion   124 
   5.4.2 Generation of Parabolic Pulses   125 
   5.4.3 Generation of Triangular and Rectangular Pulses   127
5.5 Spectral Shaping 128
5.5.1 Spectral Compression 129
5.5.2 Generation of Frequency-Tunable Pulses 132
5.5.3 Supercontinuum Generation 133
5.6 Conclusion 137
Acknowledgments 138
References 138

6 Nonlinear-Dispersive Similaritons of Passive Fibers: Applications in Ultrafast Optics 147
Levon Mouradian and Alain Barthélemy
6.1 Introduction 147
6.2 Spectron and Dispersive Fourier Transformation 150
6.3 Nonlinear-Dispersive Similariton 151
6.3.1 Spectronic Nature of NL-D Similariton: Analytical Consideration 152
6.3.2 Physical Pattern of Generation of NL-D Similariton, Its Character and Peculiarities on the Basis of Numerical Studies 153
6.3.3 Experimental Study of NL-D Similariton by Spectral Interferometry (and also Chirp Measurements by Spectrometer and Autocorrelator) 155
6.3.4 Bandwidth and Duration of NL-D Similariton 158
6.3.5 Wideband NL-D Similariton 159
6.4 Time Lens and NL-D Similariton 160
6.4.1 Concept of Time Lens: Pulse Compression—Temporal Focusing, and Spectral Compression—”Temporal Beam” Collimation/Spectral Focusing 160
6.4.2 Femtosecond Pulse Compression 161
6.4.3 Classic and “All-Fiber” Spectral Compression 163
6.4.4 Spectral Self-Compression: Spectral Analogue of Soliton-Effect Compression 165
6.4.5 Aberration-Free Spectral Compression with a Similariton-Induced Time Lens 167
6.4.6 Frequency Tuning Along with Spectral Compression in Similariton-Induced Time Lens 168
6.5 Similariton for Femtosecond Pulse Imaging and Characterization 172
6.5.1 Fourier Conversion and Spectrotemporal Imaging in SPM/XPM-Induced Time Lens 173
6.5.2 Aberration-Free Fourier Conversion and Spectrotemporal Imaging in Similariton-Induced Time Lens: Femtosecond Optical Oscilloscope 177
6.5.3 Similariton-Based Self-Referencing Spectral Interferometry 181
6.5.4 Simple Similaritonic Technique for Measurement of Femtosecond Pulse Duration, an Alternative to the Autocorrelator 185
6.5.5 Reverse Problem of NL-D Similariton Generation 187
6.6 Pulse Train Shaped by Similaritons’ Superposition 188
6.6 Conclusion 190
References 191
7 Applications of Nonlinear Optical Fibers and Solitons in Biophotonics and Microscopy

Esben R. Andresen and Hervé Rigneault

7.1 Introduction

7.2 Soliton Generation

7.2.1 Fundamental Solitons

7.2.2 A Sidenote on Dispersive Wave Generation

7.2.3 Spatial Properties of PCF Output

7.3 TPEF Microscopy

7.4 SHG Microscopy

7.5 Coherent Raman Scattering

7.6 MCARS Microscopy

7.7 ps-CARS Microscopy

7.8 SRS Microscopy

7.9 Pump-Probe Microscopy

7.10 Increasing the Soliton Energy

7.10.1 SC-PBG Fibers

7.10.2 Multiple Soliton Generation

7.11 Conclusion

References

8 Self-Organization of Polarization State in Optical Fibers

Julien Fatome and Massimiliano Guasoni

8.1 Introduction

8.2 Principle of Operation

8.3 Experimental Setup

8.4 Theoretical Description

8.5 Bistability Regime and Related Applications

8.6 Alignment Regime

8.7 Chaotic Regime and All-Optical Scrambling for WDM Applications

8.8 Future Perspectives: Towards an All-Optical Modal Control in Fibers

8.9 Conclusion

Acknowledgments

9 All-Optical Pulse Shaping in the Sub-Picosecond Regime Based on Fiber Grating Devices

Maria R. Fernández-Ruiz, Alejandro Carballar, Reza Ashrafi, Sophie LaRochelle, and José Azáña

9.1 Introduction

9.2 Non-Fiber-Grating-Based Optical Pulse Shaping Techniques

9.3 Motivation of Fiber-Grating Based Optical Pulse Shaping

9.3.1 Fiber Bragg Gratings (FBGs)

9.3.2 Long Period Gratings (LPGs)

9.4 Recent Work on Fiber Gratings-Based Optical Pulse Shapers:

9.4.1 Recent Findings on FBGs
9.4.2 Recent Findings on LPGs 276
9.5 Advances towards Reconfigurable Schemes 284
9.6 Conclusion 285
References 285

10 Rogue Breather Structures in Nonlinear Systems with an Emphasis on Optical Fibers as Testbeds 293
Bertrand Kibler
10.1 Introduction 293
10.2 Optical Rogue Waves as Nonlinear Schrödinger Breathers 295
10.2.1 First-Order Breathers 295
10.2.2 Second-Order Breathers 301
10.3 Linear-Nonlinear Wave Shaping as Rogue Wave Generator 303
10.3.1 Experimental Configurations 304
10.3.2 Impact of Initial Conditions 306
10.3.3 Higher-Order Modulation Instability 308
10.3.4 Impact of Linear Fiber Losses 309
10.3.5 Noise and Turbulence 311
10.4 Experimental Demonstrations 311
10.4.1 Peregrine Breather 312
10.4.2 Periodic First-Order Breathers 313
10.4.3 Higher-Order Breathers 315
10.5 Conclusion 317
Acknowledgments 318
References 318

11 Wave-Breaking and Dispersive Shock Wave Phenomena in Optical Fibers 325
Stefano Trillo and Matteo Conforti
11.1 Introduction 325
11.2 Gradient Catastrophe and Classical Shock Waves 326
11.2.1 Regularization Mechanisms 327
11.3 Shock Formation in Optical Fibers 329
11.3.1 Mechanisms of Wave-Breaking in the Normal GVD Regime 330
11.3.2 Shock in Multiple Four-Wave Mixing 333
11.3.3 The Focusing Singularity 335
11.3.4 Control of DSW and Hopf Dynamics 336
11.4 Competing Wave-Breaking Mechanisms 337
11.5 Resonant Radiation Emitted by Dispersive Shocks 338
11.5.1 Phase Matching Condition 339
11.5.2 Step-Like Pulses 340
11.5.3 Bright Pulses 341
11.5.4 Periodic Input 342
11.6 Shock Waves in Passive Cavities 343
11.7 Conclusion 345
Acknowledgments 345
References 345
Contents

12 Optical Wave Turbulence in Fibers 351
    Antonio Picozzi, Josselin Garnier, Gang Xu, and Guy Millot
12.1 Introduction 351
12.2 Wave Turbulence Kinetic Equation 354
12.2.1 Supercontinuum Generation 354
12.2.2 Breakdown of Thermalization 360
12.2.3 Turbulence in Optical Cavities 365
12.3 Weak Langmuir Turbulence Formalism 371
12.3.1 NLS Model 372
12.3.2 Short-Range Interaction: Spectral Incoherent Solitons 372
12.3.3 Long-Range Interaction: Incoherent Dispersive Shock Waves 375
12.4 Vlasov Formalism 378
12.4.1 Incoherent Modulational Instability 380
12.4.2 Incoherent Solitons in Normal Dispersion 381
12.5 Conclusion 384
Acknowledgments 385
References 385

13 Nonlocal Disordered Media and Experiments in Disordered Fibers 395
    Silvia Gentilini and Claudio Conti
13.1 Introduction 395
13.2 Nonlinear Behavior of Light in Transversely Disordered Fiber 396
13.3 Experiments on the Localization Length in Disordered Fibers 399
13.4 Shock Waves in Disordered Systems 403
13.5 Experiments on Shock Waves in Disordered Media 407
13.5.1 Experimental Setup 407
13.5.2 Samples 407
13.5.3 Measurements 409
13.6 Conclusion 412
Acknowledgments 413
References 413

14 Wide Variability of Generation Regimes in Mode-Locked Fiber Lasers 415
    Sergey V. Smirnov, Sergey M. Kobtsev, and Sergei K. Turitsyn
14.1 Introduction 415
14.2 Variability of Generation Regimes 417
14.3 Phenomenological Model of Double-Scale Pulses 425
14.4 Conclusion 428
Acknowledgments 429
References 429

15 Ultralong Raman Fiber Lasers and Their Applications 435
    Juan Diego Ania-Castañón and Paul Harper
15.1 Introduction 435
15.2 Raman Amplification 436
15.3 Ultralong Raman Fiber Lasers Basics 439
15.3.1 Theory of Ultralong Raman Lasers 439
15.3.2 Amplification Using URFLs  444
15.4 Applications of Ultralong Raman Fiber Lasers  452
  15.4.1 Applications in Telecommunications  453
  15.4.2 Applications in Sensing  455
  15.4.3 Supercontinuum Generation  455
15.5 Conclusion  456
  References  456

16  Shaping Brillouin Light in Specialty Optical Fibers  461
   Jean-Charles Beugnot and Thibaut Sylvestre
  16.1 Introduction  461
  16.2 Historical Background  462
  16.3 Theory  463
    16.3.1 Elastodynamics Equation  463
  16.4 Tapered Optical Fibers  465
    16.4.1 Principles  465
    16.4.2 Experiments  466
    16.4.3 Numerical Simulations  467
    16.4.4 Photonic Crystal Fibers  469
  16.5 Conclusion  473
  References  474
