ABC, see Approximate Bayesian Computation
acceptance probability
indendence sampler, 120
Metropolis–Hastings method, 110, 113
random walk Metropolis, 117
rejection sampling, 15
RJMCMC, 163, 164
thinning method, 65
antithetic paths, 247–248
antithetic variables, 88–93
for SDEs, 247–248
Approximate Bayesian Computation, 182–188
with regression, 188–192
autocorrelation, 132–135
Bayes’ rule, 139, 267
Bayesian inference, 72, 138–142, 147–152, 172–179
bias, 76
bootstrap estimates, 199–201
Monte Carlo estimation, 97–99
of discretised SDEs, 243–244
binomial distribution, 293
boolean values, 281
bootstrap confidence intervals, 203–208
BCa, 207
simple, 205
bootstrap estimates, 192–208
general, 196
of confidence intervals, 203–208
of the bias, 199–201
of the standard error, 201–203
Box–Muller transform, 34
Brownian bridge, 220
Brownian motion, 214–221
geometric, 221–223
interpolation, 218–221
Markov property, 216
scaling property, 216
simulation, 217–218
burn-in period, 130–132, 137, 151
Cauchy distribution, 37
CDF, see cumulative distribution function
change of variables, 33
χ²-distribution, 6, 293
componentwise simulation, 48–50, 142
computational cost
ABC, 184
MCMC, 135
Monte Carlo estimation, 75
rejection sampling, 20, 22
SDEs, 233, 235, 247
conditional density, 267
conditional distribution, 23–27, 183
conditional expectation, 194
confidence intervals, 83, 100–103, 245
bootstrap, 203–208
continuous-time processes, 213–261
control variates, 93–96, 251
convergence diagnostics, 136–137
correlation, 90, 91–93, 95, 132
  auto-, 132–135
  of a sample, 97–99
critical region, 104
cumulative distribution function, 12, 264
detailed balance condition, 114
diffusion coefficient, 225
discretisation error, 214
  for SDEs, 236–242
don’t repeat yourself
drift, 225
DRY, see don’t repeat yourself
effective sample size, 134
empirical distribution, 192
energy, 154
Euler–Maruyama scheme, 232–233
  for the Heston model, 256
events, 263
exponential distribution, 13, 265, 293
gamma distribution, 293
geometric Brownian motion, 221–223
geometric distribution, 11, 17, 20, 185
Gibbs measure, 154
Gibbs sampler, 142–159
  image processing, 157–159
  Ising model, 154–157
  parameter estimation, 147–152
half-normal distribution, 21
Harris recurrence, 127
Heston model, 255–259
hierarchical models, 45–50, 52, 147
hypothesis tests, 5, 103–106
i.i.d., 2
i.i.d. copies, 75
importance sampling, 84–88, 223
  for SDEs, 248–250
independence, 109, 266
independence sampler, 120–121
indicator function, 268
initial distribution
  for Markov chains, 50, 128
  for SDEs, 224
intensity function, 59, 161
inverse temperature, 154
inverse transform method, 12–15, 92
irreducible Markov chain, 127
Ising model, 154
Ito integral, 226–227
Ito’s formula, 227–230
Jacobian matrix, 33, 34, 37, 164, 165
Kronecker delta, 168
kurtosis, 294
Lagrange multipliers, 246
law of large numbers, 269
  for Markov chains, 128–130
LCG, see linear congruential generator
Linear Congruential Generator, 2–4
marginal distribution, 48–50
Markov chain, 50–58, 109, 126–130
  continuous state space, 56–58
  discrete state space, 51–56
  Harris recurrent, 127
  initial distribution, 50, 128
  irreducible, 127
  law of large numbers, 128–130
  reversible, 112, 114
  time-homogeneous, 51
Markov Chain Monte Carlo, 109–180
  convergence, 126–138
  reversible jump, 159–179
Markov property
  of Brownian motion, 216
MCMC, see Markov Chain Monte Carlo
