Contributors vii
Preface ix

1 The evolution of water quality criteria in the United States, 1922–2003
Alfred Dufour and Stephen Schaub 1

2 A management context for the statistical design of recreational contact water quality monitoring programs
Stephen B. Weisberg 13

3 Conceptual bases for relating illness risk to indicator concentrations
D.F. Parkhurst, G.F. Craun, and J.A. Soller 19

4 On selecting the statistical rationale for revised EPA recreational water quality criteria for bacteria
Richard O. Gilbert 45

5 Sampling recreational waters
A.H. El-Shaarawi and S.R. Esterby 69

6 The lognormal distribution and use of the geometric mean and the arithmetic mean in recreational water quality measurement
Larry J. Wymer and Timothy J. Wade 91

7 The EMPACT beaches: a case study in recreational water sampling
Larry J. Wymer 113

8 Microbial risk assessment modeling
Graham McBride 135
9 A plausible model to explain concentration – response relationships in randomized controlled trials assessing infectious disease risks from exposure to recreational waters 153
   Albrecht Wiedenmann

10 Nowcasting recreational water quality 179
   Alexandria B. Boehm, Richard L. Whitman, Meredith B. Nevers, Deyi Hou, and Stephen B. Weisberg

11 Statistical sensitivity analysis and water quality 211
   Alessandro Fassò
