Subject Index

Absolute risk aversion, 59–60, 73, 75–76
Active investment strategy, 399, 415–424, 501
After-tax return, 8
Aggressive securities, 298
Algorithmic trading, 501
Alpha (see also Jensen’s alpha), 166–180, 187, 189, 191, 399
Alpha intercept (see Alpha)
Alternative trading systems (ATS), 500
Appraisal ratio, (see Information ratio), 447
Arbitrage
Defined, 371–375,
Deterministic (see Risk free arbitrage), 375
Index, 375–378,
Risk free, 371–375
Statistical, 373–375,
Arbitrage portfolio, 361–365
ArcaEx, 490
Archipelago, 490
Asset allocation, 473, 475–476
Asset pricing model, 299–300
Assumptions
Capital asset pricing model, 291–292, 438
Capital market theory, 438
Markowitz portfolio analysis, 291
Portfolio analysis fundamental, 291
Utility theory, 46
Attainable efficient frontier, 17–44
Axioms of utility, 46
Bear market, 337–341, 436, 449–450
Benchmark portfolio, 156–162, 292–293
Beta (see Undiversifiable risk)
Bayesian, 403
Blume’s technique, 402–403
Calculation of, 172
Consumption, 366
Definition of, 168–173
Determinants of, 406–407
Forecasting, 401–404
Portfolio, 176–177
From risk premiums, 171–173
Intertemporal moves, 404–405,
Nonstationarity, 404–405
Random walk, 404–405
Stability, 404–405
Vasicek’s technique, 403–404
Black-Jensen, Scholes tests of CAPM, 356–340
Black Monday, 503
Borrowing and lending rates, 85–86, 102,
126–130, 311
Different rates, 126–130, 311–316
Boston Stock Exchange (BSE), 494
Brennan’s model, 319
Broker, 499
Bull market, 337–341, 436, 449–450
Capital gains tax, 8
Calculus minimization, 116–118
Capital asset pricing model (CAPM)
Arbitrage pricing theory and, 385–386
Asset pricing with the, 299–300,
Assumptions underlying, 318–322
Borrowing and lending rates differ in, 314–316
Cross-sectional tests of, 333–335
Derivations of, 295–299, 301–303, 303–305
Different lending and borrowing rates,
314–316
Errors in variables issues, 345–353
Extensions, 311–330
Investment horizon, 316
Market model and, 300–301
Multivariate empirical tests, 353–356
Tangency portfolio and, 305–306
Taxes and the, 325–327
Tests and, 318–320, 333–335, 356–357
Transaction costs and, 320–321
Unmarketable assets and, 322–323, 328–330
Zero-beta CAPM, 324–325
Capital market line (CML)
With different borrowing and lending rates,
130
Proof of linearity, 294
Capital market theory, 37–38
Assumptions, 438
CAPM (see Capital asset pricing model)
CCAPM (see Consumption-based capital asset
pricing model)
Capitalization rate, 296
Certainty equivalent, 54–55
Characteristic line (see Single index model)
From risk premiums, 171–173,
Original, 166–168,
Circuit breakers, 504
CML (see Capital Market Line)
Compounding
Continuously, 9–10
Discrete time, 8–9
Finite, 8–9
Concave, 54
Conditional expectation, 166–167
Conditional VaR, (see VaR), 270
Constant elasticity of substitution, 64
Constant relative risk aversion, 60–62
Construction of portfolios
Actively traded portfolios, 415–424
Optimal portfolios, 396–400
Consumption-based capital asset pricing model (CCAPM), 363–366
Lognormality and, 367–368
Power utility function and, 365–366
Consumption beta, 366
Consumption-investment decision, 361
Continuous, 10
Continuous time asset pricing models, 361–368
Continuous time capital asset pricing model, 362
Continuously compounded, 8–10
Continuously compounded return, 8–10, 207–208
Controlled portfolio revision, 426–430
Controlled transition, 426–430
Convex, 56
Corner portfolio, 125
Correlation coefficient, 19–20
Defined, 19
Calculation of, 19–20
Estimate of, 19–20
Cosemivariance, 231–233
Cost of capital, 296
Covariance
Defined, 18–19, 168
Calculation of, 18–19
Critical line, 93, 99–111
Crossing networks, 500
Cumulative probability, 237–239
Curvilinear characteristic line, 449–451
Dark pools, 500
Decimalization, 496–497
Decision horizon, 361
Decision variables, 23
Defensive security, 298
Delta-normal method, 270–274
Diagonal model (see also Index models)
Diagonal model (see Single index model)
Diminishing marginal utility of wealth or returns, 46, 52–55, 65
Diversifiable risk (see Simple diversification), 167–168, 408–409
Diversification (see also Portfolio analysis)
International, 411–415
Introduced, 38–39, 407–415
Market timing and, 409–411
Naive, 408–409
Simple, 408–409
Superfluous, 408–413
Dominance, 33–35
Downside beta (see Beta)
Downside CAPM (see Capital asset pricing model)
Downside SML (see Security market line)
Econometric models (see also Index models)
Efficient frontier
Defined, 3, 123–126
And the single index model, 178–187
Capital market line and, 128–129
Generating with QP, 85–86
With no riskless asset, 115–118
With the riskless asset, 127–130
Efficient market hypotheses, 395–398
Efficient portfolio (see Portfolio analysis)
Efficient frontier
Derivation, 152–163
Set theorem, 125
Efficient market hypotheses
Fair game model, 396
Random walk model, 397
Semi-strong form, 395–396
Strong form, 395–396
Submartingale model, 397–398
Weak form, 395–396
Efficient portfolios
Definition, 3, 125
Farrar’s mutual funds, 437
Mathematical derivation of, 123–126
Electronic communications network (ECN), 501
Electronic order working system, 501
Ellipse, 90, 101, 103–104, 106, 109
Error term, 166–168
Errors-in-variables (EIV), 344–351
Ex ante, 292, 300
Ex post, 178–179, 300
Excess return, 171–173
Exchange rate risk, 411–413
Expected return
Defined, 16–17, 22–23, 29–30
Covariance and, 18–19
Beta and, 295–296
Calculation of, 17
Portfolio, 22–23
Expected utility
Hypothesis, 45–46
Of multiperiod consumption, 361
Of returns, 48
Of terminal wealth, 47–48
Expected value
Defined, 13–15, 296
Operator, 13–15
Theorems, 13–19, 509–512
Exponential utility function, 62–63

Revision costs 424–430, (see Portfolio revision)
Reward-to-variability ratio
  Sharpe’s, 439–441
  Treynor’s, 441–443
Risk
  A single security’s, 20–21
  Absolute risk-aversion, 59–60, 73–76
  Aversion, 50–56, 62–64
  Aversion measures, 53–55
  Averter’s expected utility, 53–55
  Definition, 15–18, 29–31,
  Definition of Diversifiable (see Simple diversification)
  Indifferent investor, 51–52
  Lovers, 52, 56–57
  Neutral investor, 51–52, 57–59,
  Relative risk aversion, 60–62, 76–77
  Return tradeoff, 35–36
  Systematic (see Undiversifiable risk)
  Unsystematic (see Diversifiable risk)
Risk-adjusted discount rate, 296
Risk-free asset (see Risk-free interest rate)
Risk-free rate (see Risk-free interest rate)
Risk-free interest rate
  Defined, 126–128
  Fluctuating, 173–176
Risk-free borrowing and lending, 311
Riskless interest rate (see Risk-free interest rate)
Risk premium
  Defined, 171
  Pratt and Arrow utility function and, 59
Safety first criterion
  Described, 218
  Kataoka’s, 222–225
  Roy’s, 218–222,
  Telser’s, 225–228
Simple diversification, 408–409
SEC (see Securities Exchange Commission)
Second-degree stochastic dominance (SSD) (see Stochastic dominance)
Securities Exchange Commission (SEC), 494–497
Security analysis (see also Fundamental security analysis, Random walk model)
Security analyst, 1–2, 398, 400–401
Security marker line (SML) (see Capital Asset Pricing Model, CAPM)
  Asset pricing with the, 299–300
Assumptions underlying, 291–292, 318–322
Borrowing and lending rates differ in,
314–316
With beta, 298
With covariance, 297
Security market plane, 384
Selectivity, 399
Semideviation of returns, 30, 228–229
Semivariance
   - Capital market theory and, 234–236
   - Defined, 30, 228–236
   - Portfolio analysis with, 231–234
   - Semideviation, 30, 228–229
   - Utility theory and, 230–231
Separation theorem, 145–146, 293–294
Sharpe’s ranking technique, 439–441
Sharpe ratio (see Reward-to-variability ratio)
Short position (see Negative weights)
   - Defined, 115–116, 298–299
   - Arbitrage and, 371–376
   - Numerical examples, 371–376
   - Simple diversification, 408–409
   - Simplified models (see also Index models)
Simulation
   - Historical method, 274–276
   - Monte Carlo, 276–277
Single factor model (see Single index model)
Single index models (see also Market model), 165–186
   - Diversification and, 176–177
   - Estimating alpha and beta, 168–170
   - Estimate of covariance, 168
   - In Excess returns, 171–176
   - Variance decomposition, 168, 171
Single period return (see Holding Period Return), 2, 165
Singular matrix, 516–517
Skewness
   - Defined, 31, 213, 246
   - Negative or positive, 31
SML (see Security market line)
St. Petersburg paradox, 80
Standard deviation, 16
Statistical arbitrage, 373–375
Stochastic dominance
   - Defined, 236–246
   - First-order, 236–241, 254–256
   - Second-order, 241–244, 256–257
   - Third-order, 244–245, 257
Submartingale model, 396–398
Survivability bias, 454
Symmetric, 30–31
Systematic risk (see Beta, Undiversifiable risk)
   - Tangency portfolio, 129–130, 150–152
   - Tax rates, different, 8
Terminal period (see Terminal wealth, Geometric mean return)
Third-degree stochastic dominance (TSD), 244–245
Third-order stochastic dominance (see Stochastic dominance)
Time-series regression (see Characteristic line)
Timing (see Market timing)
Trading curbs, 503
Trading horizon, 361
Transactions cost (see also Portfolio revision)
   - Decimalization and falling, 497
   - Decreasing, 494–497
Treynor-Mazuy model, 449–450
Treynor’s measure, (see Reward-to-variability ratio) 441–443
Turnover rate of the portfolio, 429
Two asset portfolio analysis, 121–122
Two-fund theorem (see also Separability theorem)
Two-index models (see also Index models)
   - Diversification, 188–189
   - Estimating Inputs for Efficient Frontier, 186–188
Undiversifiable risk (see also Beta, Systematic risk), 167–170
Unsystematic risk (see also Residual variance, Diversifiable risk)
U.S. stock market breakdown in 1995 and 2010, 495
Utility
   - Analysis, 45–80
   - Assumptions, 62
   - Axioms, 46
   - Diminishing marginal, 46, 52–55, 65
   - Expected, 46, 77
   - Function, 32–33
   - Indifference curve, 5, 35–36, 69–74, 78–79
   - Introduced, 32–33
   - Isoelastic, 64–65
   - Isoquants, 35
   - Logarithmic function, 62–65
   - Marginal, 52
   - Myopic, 65
   - Multiperiod consumption, 363–366
   - Of returns, 48
   - Of wealth, 47–48
   - Portfolio analysis and, 66–69
   - Positive linear transformations (see also Expected utility)
   - Power function, 63
   - Quadratic function, 63, 67–69, 78–79
   - Wealth and return, 47–49
Utility functions
   - Concave, 54
   - Convex, 56
   - Defined, 5, 32–33
Utility functions (Continued)
  Expected, 77
  Isoelastic, 64–66
  Linear, 50–52
  Log, 62–65
  Myopic utility maximizing with logs, 216–217
  Power, 62–65
  Quadratic, 62–65
  Risk averter, 62–65

Value-at-Risk (VaR)
  Accuracy of, 282–285
  Back testing, 283–284
  Components, 267–269
  Conditional, 270
  Delta Gamma method, 285–287
  Delta-normal method, 270–274
  Described, 261–263
  Incremental, 266–267
  Marginal, 265–266
  Modified, 269
  Portfolio, 263–264
  Simulation, 274–277
  Single asset, 267–269
  Stress testing, 284–285
  Variance-Covariance Method, 270–274
  Volatility estimation, 277–282
  VaR (see Value-at-Risk)

Variance
  Defined, 16–18
  Portfolio, 23–26
  Variance-covariance matrix, 23–26, 113–114
  Variance of returns (see also Risk, Standard Deviation of returns)

Volatility
  Estimation of, 270–274
  Exponentially weighted moving average, 278
  Implied, 281–282
  GARCH-based, 278–279
  Simple moving average, 277–278
  Unconditional, 277
  Using price ranges, 279–281

Wealth
  Initial, 47–48
  Terminal, 48
  Utility of, 47–48
  Wealth maximization (see also Geometric mean return)

Weights
  Of assets, 374–375
  Of liabilities, 374–375
  Portfolio, 22–27, 374–375
  Winners repeat (see Goetzmann-Ibbotson model), 462–465

Zero-beta portfolio, 311–314
