INDEX

Note: An n after a page number indicates a footnote.

A
Absolute dispersion, 111
Absolute frequency, 75, 77, 78–79, 83
Absolute value differentiation, 112n
Acceptance region, 288
Accrued interest, 61
Active return, 542–544
Active risk
  active factor risk, 547n
  active manager guidelines, 546
  active risk squared, 547
  active specific risk, 547
  decomposition of, 546n, 547–549
  information ratio, 545
  tracking error, 545, 545n
Addition rule for probabilities, 159–161
Adjusted $R^2$, 402–403
$\alpha$ (alpha), 286–287, 416
Alternative hypothesis, 284–285
American options, 213–214, 213n
Analysis of variance (ANOVA)
  bid–ask spread explained, 389
  definition, 366
  $F$-tests, 366, 367–369
  population means and, 292n
  regression analysis (see Regression analysis)
  regression sum of squares, 367
  sum of squared errors, 367
Annualizing
  bank discount basis, 59–60
  holding period yield, 61–62
  IRR periodic rate, 53n, 58
  semiannual yield to maturity, 64
  time-weighted return, 55
  tracking error, 545n
  volatility estimation, 230, 230n, 231–232
Annual percentage rate (APR), 12n
Annual percentage yield (APY), 12n
Annuities
  annuities due, 13, 21–22
  lump sum as, 35–36
  ordinary annuities, 13, 14–15, 19–24, 26
  perpetuities, 13, 24–26
  solving for payment size, 31–35, 36
ANOVA. See Analysis of variance
Antilogarithm conversion, 391, 391n
A priori probability, 154
Arbitrage pricing theory (APT)
  APT definition, 527
  APT equation, 528–529
  arbitrage definition, 528, 528n
  arbitrage opportunity, 528, 530–532
  arbitrage portfolio, 531
  CAPM as special case, 528n
  factor risk premium, 529
  pairs arbitrage trade, 155
  parameters, 529–530
  pure factor portfolios, 529
ARCH (autoregressive conditional heteroskedasticity), 504–507, 507n, 514
Arithmetic average. See Sample mean
Arithmetic mean. See also Mean
  of Bernoulli random variables, 211
  of binomial random variables, 211
Chebyshev’s inequality, 121–123, 218
computation of, 80n
cross-sectional mean, 88–89
definition, 86, 211n
extreme-value sensitivity, 90, 90n, 92–93
forward-looking context, 139
geometric mean versus, 100–102, 101n, 103, 138–139
harmonic mean versus, 103
historical returns, 138
investment style comparison, 109–110
population mean, 86–87, 221, 221n
properties of, 89–90
sample mean, 87–89, 221, 249
standard deviation correlation, 120
trimmed mean, 90n
weighted mean versus, 96, 96n
Winsorized mean, 90n
Arithmetic mean returns, 100–101, 101n, 102, 109–110
Artifacts of dataset, 271n
Asian call options, 233–235
Asset allocation correlatons and, 340–342
multifactor models for, 542, 549–551
Autocorrelation. See also Serial correlation
consequences of, 415–419
moving-average fitting time-series, 497
number computed, 476n
residual autocorrelations, 475, 475n
residual error, 462
time-series model, 474–477, 474n
Autoregressive (AR) models
autoregressive conditional heteroskedasticity, 504–507, 507n
autoregressive moving-average models, 504
chain rule of forecasting, 478
covariance stationary, 472–473, 472n, 473n
CPI model, 478–480 (see also Consumer Price Index)
definition, 462, 472
forecasting, 477–480, 494, 513
mean reversion, 477
model specification check, 475–477
moving-average versus, 494, 497, 513n
random walk as, 485
regression coefficient instability, 482–485
sample period length, 483–485
seasonality, 499–503
serially correlated errors, 474–477
time-series data challenges, 462
Average, 87n. See also Arithmetic mean; Mean estimating via regression, 360–362, 360n, 368–369, 369n
standardized beta, 538
β (beta), 286–287
Biases
data-mining bias, 268–271, 423
evaluation of forecast bias, 352–353, 364–366
hypothesis testing, 290–291
in investment research, 273–274
look-ahead bias, 272, 274
omitted variable bias, 423–425
sample selection bias, 271–272, 273, 290
survivorship bias, 271–272, 273, 290
time-period bias, 272–273, 274, 290–291
Bid–ask spreads
ANOVA explaining, 389
multiple linear regression, 387–391
negative, 428, 429
nonlinearity and, 426–429
omitted variable bias, 424–425
Bimodal distributions, 93
Binomial distributions
Bernoulli random variable, 204–205
binomial option pricing model and, 204
binomial probability function, 206–211
binomial random variables, 206, 211, 213
block broker evaluation, 205–206, 208–210
combination formula, 207
independence assumption, 206, 212
price movement modeling, 204–205, 206–208, 212–214
as probability distributions, 200
skew, 207
Binomial formula, 190
Binomial option pricing model
binomial distributions and, 204
combination formula, 190–191
price movement modeling, 204–205, 206–208, 212–214
as probability distribution, 200
Binomial random variables, 206, 211, 213
Binomial trees
earnings per share analysis, 169–170, 172
option valuing, 213–214
price movement as binomial model, 205, 212–213
Bivariate normal distributions, 219n, 315n, 344n
Black–Scholes–Merton option pricing model
continuously compounded returns, 228n, 230
as continuous time finance model, 228n
lognormal distribution assumption, 226–227
Monte Carlo simulations versus, 238
probability distribution use, 200
volatility and, 230
Block broker evaluation, 205–206, 208–210
Bond funds
equity funds versus, 95–97
portfolio expected return and variance, 175–180
Bonds
bond equivalent yield, 63–64
bond indexing, 250–251
correlations, 341–342, 346
coupon-bearing bonds, 61, 74
credit ratings, 73, 73n
defaults via binomial distribution, 212
IRR as yield to maturity, 46
pricing of, 201
recovery rates on defaulted, 303–304
zero coupon default risk, 173–174
Book-value-to-price ratio, 534
Box–Pierce Q-statistic, 475n
Breusch–Pagan test, 411–413, 411n, 417–419

C
Calculators
geometric mean, 99
internal rate of return, 49, 53n
money-weighted rate of return, 53, 53n
precision of, 6
rounding errors, 9n
Call options, 213–214, 213n
Canada Treasury bills, 3n, 62n
Capital asset pricing model (CAPM)
as arbitrage pricing theory special case, 528n
beta, 527, 527n
data mining bias, 269n
heteroskedasticity and, 410
market portfolio return, 527
mean–variance foundation, 526
multifactor models versus, 533, 552
as probability distribution, 200
regression of mutual fund performance, 367–369, 369n
systematic risk, 526–527
Capital budgeting, 44
Capital structure, 44
Carhart four-factor model, 529, 532–533, 543–544
Cash flow from operations, 342–343, 343n, 429–431
Cash flows
additivity principle, 32, 37
annuity future values, 13–16
annuity types, 13
correlations among, 342–343, 343n
estimation, 44n
future value of single, 4–13
internal rate of return, 46–51
macroeconomic factor models, 533–537
money-weighted rate of return, 46, 52–53
net present value, 44–46
present value of, 16–27
regression analysis, 429–431
retirement annuity payment size, 32–35
series of equal cash flows, 14–15, 19–26
series of unequal cash flows, 15–16, 26–27
weighted average cost of capital, 44n
Cdf. See Cumulative distribution function
Cells of stratified sampling, 250–251
Center for Research in Security Prices (CRSP), 272
Central limit theorem
continuously compounded return normality, 230
definition, 218, 230n, 254, 286n
nonnormal underlying, 255n, 256–257
sample size and, 255, 257, 352n
Central tendency
arithmetic mean, 80n, 86–90, 92–93, 96, 96n, 100–101
definition, 70, 86
dispersion, 111 (see also Dispersion)
geometric mean, 30n, 54, 55, 98–102
harmonic mean, 102–103
median, 90–93
mode, 93–94
weighted mean, 95–98
Certificates of deposit (CDs), 6, 9–10
Chain rule of forecasting, 478
“Change in” (Δ), 388n
Chebyshev’s inequality, 121–123, 218
Chi-square distributions, 286, 311n, 561
Chi-square tests
confidence intervals and, 309n
critical values for, 561
F-tests versus, 351n
hypothesis tests on single variance, 308–310
p-value via spreadsheet function, 292n
Classic normal linear regression model
assumptions, 351–352
Coefficient of determination (R²)
adjusted R², 402–403
linear regression, 356–358, 402
multicollinearity symptom, 420
multiple linear regression, 390, 390n, 402
Coefficient of variation, 123–125
Cointegrated time-series data, 509–510, 509n, 511
Combination formula, 190, 207
Common size statements, 429–431, 429n
Comparisons
  common size statements for, 429–431, 429n
  exchange traded funds vs. T-bills, 126–127
  factor models, 539–541
  forecasting model performance, 481–482
  geometric vs. arithmetic means, 100–102, 101n, 103, 138–139
  global vs. US stocks, 307–308
  Monte Carlo simulations for, 233
  negative Sharpe ratios, 127
  paired comparisons test, 304–308
  portfolio managers, 59
  returns across countries, 80–81, 88–89
  sequential comparisons, 162, 162n
  stock return and price, 228–230
  time- vs. money-weighted returns, 54, 56–58
  variance of returns pre- and post-crisis, 312–313
Compounding
  annual, 4, 5, 12
  compound growth rate, 30, 30n, 98, 102
  continuous, 11–12, 13 (see also Continuous compounding)
  daily, 12
  definition, 5
  frequency, 11–12, 18–19
  future value of single cash flow, 4–5, 9, 12
  monthly, 9, 10–11, 12, 19
  quarterly, 9–10, 12
  semiannual, 12, 13
  “stated annual interest rate,” 12n
  time-weighted rate of return, 53–58
Compound returns, 99–102
Conditional expected values, 169
Conditional heteroskedasticity
  autoregressive, 504–507, 507n, 514
  Breusch–Pagan test, 411–413, 411n
  serial correlation corrections, 418
Conditional probability
  definition, 157
  historical vs. future performance, 157–159
  likelihoods, 185
  limit order execution, 160–161
  as ratio, 156–157
  total probability rule, 164–166, 169–173
  unconditional probability and, 156n
Confidence intervals
  chi-square test and, 309n
  confidence limits, 260, 260n
  construction of, 260, 261
  definition, 258, 260, 266, 283
  degree of confidence, 260
  hypothesis testing and, 289–290, 289n, 358–359
  one-sided, 260n
  population mean, 261–268
  population variance unknown, 262–265
  practical interpretations, 260
  prediction intervals as, 369–372
  probabilistic interpretations, 260
  reliability factors, 260–261, 261n, 263, 265, 266
  sample size selection, 266–268, 266n
  Sharpe ratio population mean, 262–263, 265
  Student’s t-distribution, 262, 263–265
  two-sided, 260
  underlying distribution unknown, 262–263
  for variance, 309n
  z-alternative, 262–263
Consistent probabilities, 155–156
Consol bonds, 24
Constant-proportions strategy, 97
Consumer Price Index (CPI)
  autoregressive conditional heteroskedasticity, 505–506
  in- vs. out-of-sample, 481–482
  modeling, 478–480
  time-series model instability, 483–485
  trend, 463–465, 471, 471n
Continuous compounding
  compounding frequency, 12
  continuously compounded returns, 228n, 229–230, 231–232
  discrete versus, 228n
  effective annual rate, 13
  exponential growth, 466, 466n, 469–471
  future value of lump sum, 11–12
  Continuous random variables, 167n, 201, 202, 214–218
  Continuous time finance models, 228n
  Continuous uniform distributions, 214–218
  Corporate valuation, 393–396, 398–399
Correlation
  bivariate normal distributions, 219n
  correlation analysis definition, 329
  correlation coefficient calculation, 330, 332–333
  correlation coefficient definition, 329–330
  correlation coefficient significance tests, 344–347
  correlation coefficient variables, 356
  correlation matrix, 180, 181
  definition, 180
  diversification and, 180, 526
  estimating, 182–183
  factor definition, 525
  first-order serial correlation, 415
  Fisher’s z-transformation, 341n
  independence vs. uncorrelatedness, 183
  joint normal distributions, 219
  multivariate normal distributions, 219
  negative serial correlation, 415, 417n, 471n
  nonlinear relation and, 333–334
  outliers, 334–336
  pairwise and multicollinearity, 419–420, 420n
  positive serial correlation, 415, 417n, 471n
  properties of, 180–181
  residual error, 462
  scatter plots, 328–329, 330, 331, 337
  serial correlation, 415–419, 422 (see also Serial correlation)
  Spearman rank correlation coefficient, 315–317
  spurious correlation, 336
  uses of, 336–343
Cost averaging via harmonic mean, 103
Counting
  Bernoulli trials, 207
  combination formula, 190
  enumeration, 188
  factorials, 189–190, 189n
  labeling problems, 189–190
  multinomial formula, 190
  multiplication rule of, 189–190
  permutations, 191, 191n
Coupon-bearing bonds, 61, 74
Covariance
  correlation coefficient calculation, 332–333
  covariance matrix, 178, 179, 180, 181
  definition, 176–177, 330
  diversification correlation, 180
  estimating, 182–183
  joint probability function, 181–183
  “off-diagonal covariance,” 178, 178n, 179
  portfolio variance, 176–180
  of random variable with itself, 178
  sample covariance, 332, 332n
  sign of, 178
  stationarity, 472–473, 472n (see also Covariance stationarity)
  variance affected by, 178
Covariance stationarity
  definition, 472–473, 472n
  forecasting model steps, 513
  random walk determination, 489–493
  random walks, 473n, 486–489
  trend models, 473n
  unit root test, 489–493, 507–509
Credit risk, 73, 73n, 94–95
Critical thinking decision making, 283n
Critical values. See also Rejection points
  chi-square, 561
  Durbin–Watson (DW) statistic, 566
  F-distributions, 562–565
  one-sided t-distributions, 264n, 560
Cross-sectional data
  cross-sectional mean, 88–89
  cross-sectional standard deviation, 115–116
  cross-sectional variance, 115–116
  definition, 251, 253
  fundamental factor models, 534
  linear regression, 348, 362–364
  longitudinal data, 253n
  multiple linear regression, 387, 393
  observation notation, 348, 387, 393
  ordering vs. time-series, 471n
  panel data, 253n, 348n
  parameter instability, 372
  sampling, 253–254
  stock screening and independence, 162–163
Cumulative distribution function (cdf)
  continuous uniform cumulative distribution, 215–216
  definition, 202
  discrete uniform distribution, 202–204
  normal cumulative distribution function, 221, 222n
  normal cumulative probabilities, 222, 223, 558–559
  random observation generation, 235
Cumulative frequency distributions, 84–85
Cumulative relative frequency, 76, 77, 78–79, 84–85
Currencies. See Exchange rates
Data mining
bias, 268–271, 423
definition, 268, 423
intergenerational, 269, 269n, 270
model specification versus, 422–423
warning signs of, 270–271
Data snooping. See Data mining
Debt instruments
correlations of debt and equity returns, 341–342
holding period yield, 61
long-term debt markets, 63–64
pure discount instruments, 59
short-term debt markets, 59–64, 61
Deciles, 103–110
Decision making via critical thinking, 283n
Default risk premium, 3, 173–174
Defaults, 212, 303–304
Degree of confidence, 260
Degrees of freedom (df)
chi-square and F-distributions, 311n
definition, 263
F-tests, 367
linear regression, 355, 358–359
multiple linear regression, 390, 390n
sample variance, 117, 263–264
t-distribution parameter, 263–264, 293
Delistings, 272, 272n
Density, 202. See also Probability density function
Dependent events, 161, 304
Dependent variables
ANOVA, 366
autoregressive models, 462
linear regression, 347, 348, 351, 356
log-log regression models, 387–388
multiple linear regression, 386–388, 392–393
population regression coefficient testing, 399–402
predictions about, 369–372, 398–399
qualitative dependent variables, 435–437
time-series misspecifications, 431–435
Derivatives of semivariance, 121n
Descriptive statistics, 70, 71. See also Statistical methods
Deviations. See Dispersion
Differencing random walks, 486–489, 491–493
Diffuse priors, 188
Discount, 2, 16–19, 59
Discounted cash flow. See Time value of money
Discount rate
“interest rate” equivalence, 2
internal rate of return, 46, 48, 50
net present value computation, 44–45, 51
present value and, 18
Discount yield, 60, 62–63
Discrete random variables, 167n, 200–204, 202n
Discrete uniform distributions, 202–204
Discrete vs. continuous compounding, 228n
Dispersion
absolute dispersion, 111
Chebyshev’s inequality, 121–123, 218
coefficient of variation, 123–125
definition, 70, 111
interquartile range, 111n
mean absolute deviation, 111–113, 119
population standard deviation, 114–116
population variance, 114, 115–116
range of data, 74, 111, 111n, 112–113, 201, 394n
relative dispersion definition, 123
sample standard deviation, 117–120
sample variance, 116–117, 118–119
semideviation, 120–121
semivariance, 120–121, 121n
Sharpe ratio, 111, 126–127
standard deviation definition, 114 (see also Standard deviation)
sum around mean, 90, 112
variance definition, 113–114, 167 (see also Variance)
“Distribution-free” vs. “nonparametric,” 314n
Distribution function, 202
Diversification
arbitrage and, 528
asset-specific risk elimination, 528
correlation and, 180, 340–341, 526
risk reduction via, 180
Dividend yield factor, 538
Dogs of the Dow Strategy, 270n
Dollar-weighted rate of return, 46, 52–53, 54, 56–58
Dow Dividend Strategy, 270, 270n
Down transition probability, 212–213
Dummy variables, 403–407, 435–437, 538, 538n
Durbin–Watson (DW) statistic
autoregression invalidity, 474
critical values for, 566
serial correlation in regression, 416–418, 471n
trend model correlated errors, 471–472
Dutch Book Theorem, 156, 156n
DW statistic. See Durbin–Watson (DW) statistic
Earnings per share (EPS)
Bayes’ formula, 184–188
conditional variances, 171
dispersion around forecast, 168
as independent events, 162
operating cost expected value, 171–173
price–earnings ratio analysis, 92–93
as random variables, 200
total probability rule, 165–166, 169–173
tree diagram, 169–170, 172
unconditional variance, 171n
Earnings yield, 347
EBITDA analysis, 217–218
Effective annual rate (EAR), 12–13
Effective annual yield (EAY), 61–63
Empirical probability, 153–154
Enterprise value (EV), 362–364, 370–371
Enumeration shortcuts, 188–191
Equal cash flows, 14–15, 19–24
Equity funds
active risk comparison, 548–549
arithmetic mean returns, 100–101
bond funds versus, 95–97
correlations, 340–342
exchange traded funds vs. T-bills, 126–127
Forbes Magazine Honor Roll, 115–116, 115n–116n
gemetric mean returns, 100–101
performance predictability, 157–159, 163–164
population variance hypothesis testing, 309–310
sample standard deviation, 118–119
sample variance, 118–119
skewness, 132–134
t-test of population mean, 294–295
Equity markets
coefficient of variation, 124–125
frequency distribution, 80–81
global vs. US, 307–308
median, 91–92
risk premium hypothesis testing, 284–292
sample mean return, 88–89
stock return and price relationship, 228–230
Equivalent annual rate (EAR), 12n
Errors
error autocorrelation, 474–477, 474n
heteroskedasticity, 408–415
homoskedasticity, 408–409
in- vs. out-of-sample forecast errors, 481–482, 514
prediction errors, 478n
root mean squared error, 481–482
rounding errors, 9n
Error term of regression
assumptions, 351, 351n, 352n
definition, 348
error autocorrelation, 474–477, 474n
uncertainty of, 370
Estimation
asymptotic properties, 259
confidence intervals, 258, 260–268, 283
consistency of estimator, 259, 434, 434n

Monte Carlo simulations for, 233
multifactor models, 525–526 (see also Multifactor models)
out-of-sample tests, 269, 423
probit models, 436–437, 436n
root mean squared error, 481–482, 512
time-series forecasting steps, 512–514
time series with unit root, 491–493, 507–512, 510n
trend models, 462–472
Modern portfolio theory (MPT)
definition, 526
diversification benefit, 180
expected return as reward measure, 175, 529
mean–variance analysis, 224–226, 526
multifactor models and, 526–527
normal distribution, 218, 224, 526
variance of return as risk measure, 175
Momentum
Carhart four-factor model, 532, 533
investment style, 108–110
“momentum” stocks, 532–533
Money market yields, 59–64
Money-weighted rate of return, 46, 52–53, 54, 56–58
Monte Carlo simulations
analytical methods versus, 238
applications of, 233
central limit theorem test, 256–257
definition, 232, 256n
historical simulation versus, 238
market timing vs. buy and hold, 235–238
normal distribution, 297n
overview of, 233–234
probability distributions and, 200, 214, 232, 233, 256n, 297n
simulation trials, 234
VAR estimation, 233
Moody’s Investors Service, 94–95, 212
Mortgage-backed security simulations, 233
Mortgages, 31–32, 35
Motley Fool “Foolish Four,” 270
Moving-average time-series models
autoregressive moving-average models, 504
autoregressive versus, 494, 497, 513n
lagging large movements, 495–496
plotting, 494–496
simple moving average, 494–496, 496n
time-series models, 496–498, 496n
12-month moving averages, 494n
MSCI, 88–89, 158, 175–180, 210
Multicollinearity, 419–422
Multifactor models
arbitrage pricing theory, 527–533
for asset allocation, 542
Carhart four-factor model, 529, 532–533, 543–544
factor analysis models, 534
factor definition, 525
factor model comparison, 539–541
factor sensitivity, 536, 538
fundamental factor models, 534, 537–541
macroeconomic factor models, 533–537, 539–541
modern portfolio theory and, 526–527
for portfolio construction, 549–551
principal components models, 534
pure factor portfolios, 529
for return attribution, 542–544
for risk attribution, 545–549
standardized beta, 538
statistical factor models, 534
for strategic decisions, 551–552
strengths of, 526
total risk attribution, 546
Multinational corporation valuation, 393–396, 398–399
Multinomial formula, 190
Multiple coefficient of determination (multiple $R^2$)
adjusted $R^2$, 402–403
definition, 390, 390n
multicollinearity, 420–421
Multiple linear regression
adjusted $R^2$, 402–403
assumptions, 392–398, 393n
assumption violations, 408–422
cross-sectional data, 387, 393
data nonlinearity, 425–429
data scaling, 387–391, 425, 429–431
data transformations, 387–391, 425–431
definition, 386
degrees of freedom, 390, 390n
dependent variable, 386–387, 392–393
dependent variable prediction, 398–399
dummy variables for, 403–407
Durbin–Watson statistic, 416–418
forecasting the past, 433
formula, 386–387
functional form of, 423–425
heteroskedasticity, 408–415, 411n, 422
independent variables, 386–387, 386n, 392–393, 393n
linear trend models, 463–465, 467–469
log-log regression models, 387–388
mergers and acquisitions and returns, 406–407
model specification, 422–435
month-of-year effects on returns, 404–405
multicollinearity, 419–422
mutual fund regression analysis, 396–398, 396n, 420–421
partial regression coefficients, 391–392, 392n
perfect collinearity, 393n, 419, 419n
population regression coefficient testing, 399–402
random walk differencing, 486–489, 491–493
random walk with drift, 489
regression coefficients, 387, 391–392, 392n
samples pooled poorly, 431
serial correlation, 415–419
standard error of estimate, 399
stationarity tests, 435, 435n
time series, more than one, 507–512
time-series covariance stationary, 472–473, 472n
time-series data, 387, 393, 462
time-series misspecification, 431–435
uncertainty, 399
valuation of corporations, 393–396
Multiplication rules
counting, 189–190
expected value of uncorrelated variables, 183
independent events, 161, 162–163
probability, 157, 159
Multivariate normal distributions, 219, 526
Mutual funds
arithmetic mean returns, 100–101
Bayes’ formula for evaluation, 184
geometric mean returns, 100–101
hypothesis test on population variance, 309–310
market timing model specification, 423, 423n
performance predictability, 157–159, 163–164
sample standard deviation, 118–119
sample variance, 118–119
Sharpe ratios, 128
skewness, 132–134
Spearman rank correlation coefficient, 316–317
t-test of population mean, 294–295
Mutually exclusive projects, 45, 50–51

N
Natural logarithm
antilogarithm conversion, 391, 391n
geometric mean, 99
independent variables with wide ranges, 394n
log-linear trend models, 466, 469–471
log-log regression models, 387–388, 426
lognormal distributions, 200, 226–232
nonlinearity of data, 426–429
rules for, 13, 31
Negative serial correlation, 415n, 416n, 417, 417n, 471n
Negative skew, 129, 131
Net income, 342–343, 343n, 346–347
Net present value (NPV), 44–51
Newey–West serial correlation correction, 418, 418n
Nodes of tree diagrams, 170, 212, 213–214
Nominal risk-free interest rate, 3
Nominal scales, 72, 73, 94, 538, 538n
Nonlinear relation, 333–334
Normal linear regression model assumptions, 351–352
Normal random variables, 219, 219n, 220, 220n, 221
Notation
cdf of standard normal variable, 222n
“change in,” 388n
complements of events, 164
correlation, 180
double summation signs, 178
factorials, 189
Greek for population parameters, 284n
hats over symbols as estimated, 206n, 348n
intervals, 75n
observations, 348, 387, 393
outcomes, 201n
random variables, 201n, 202
rejection points, 288
reliability factors, 261, 261n
Roman italics for sample statistics, 284n
unconditional probability, 153, 156
NPV. See Net present value
Null hypothesis
acceptance region, 288
definition, 284
formulation, 284–285
power of a test, 287
p-value, 291–292, 292n
rejection of, 284, 286–290 (see also Rejecting
the null hypothesis)
sample size and, 347n
significance level, 287
Type I and II errors, 286–287, 416
O
Objective probabilities, 154
Observations
autocorrelations computed and, 476n
notation of, 348, 387, 393
paired observations, 304
random observations, 235, 315n
to ranks for nonparametric tests, 314–318
time-series logical ordering, 471n
t-tests, 315n
Odds of probability, 154–155
Off-diagonal covariance, 178n
Omitted variable bias, 178n
One-tailed hypothesis tests, 284, 288, 290,
362–364
Opportunity costs
definition, 2
interest rates as, 2–3
IRR rule, 47
net present value discount rate, 45–46, 49, 51
Optimization, 112n
Option pricing models
Binomial (see Binomial option pricing model)
Black–Scholes–Merton (see Black–Scholes–
Merton option pricing model)
continuously compounded returns, 228n, 230
Monte Carlo simulations for, 233–235
volatility, 230, 231–232
Options
skew of returns, 220
underlying assets, 230n
volatility, 230
Ordinal scales, 72, 73
Ordinary annuities, 13, 14–15, 19–24, 26
Ordinary least squares (OLS)
definition, 463n
linear trend models, 463
multicollinearity and, 419
multiple linear regression model, 392, 392n
negative serial correlation and, 416n
positive serial correlation and, 415–416, 417–418
Outcomes
counting, 188–191
cumulative distribution function, 202
definition, 152
discrete uniform distribution, 202
event probability, 153, 188
notation for, 201n
possible for random variables, 201
probability distribution definition, 200
probability function, 202
random variable definition, 152, 200
sum to one, 202
Outliers, 334–336, 366
Out-of-sample forecast errors, 481–482, 514
Out-of-sample tests, 269, 423
Own covariance, 178

P
Paired comparisons test, 304–308
Paired observations, 304
Pairs arbitrage trade, 155
Pairwise correlations and multicollinearity, 419–420, 420n
Panel data, 253n, 348n
Parameters
autoregressive moving-average models, 504
confidence intervals, 258, 260–268, 283
definition, 71, 248
estimated of linear regression, 348–349. See also Estimation
equations, 87, 115
Greek letters for, 284n
lognormal distributions, 227
multivariate normal distributions, 219
normal distributions, 129, 219
one-factor APT model, 529–530
parameter instability, 372
parametric tests definition, 314
parametric vs. nonparametric tests, 318
point estimators, 258–259, 260, 283
r-distributions, 263, 293
Partial regression coefficients, 391–392, 392n
Partial slope coefficients, 391–392, 392n
Pearson coefficient of skewness, 129n
Percentiles, 90n, 103–108, 222
Perfect collinearity, 393n, 419, 419n
Performance appraisal
analyst coverage probit model, 436–437
binomial distribution for, 205–206, 208–211
block broker evaluation, 205–206, 208–210
definition, 51
fundamental factor models, 534, 537–541
investment manager, 210–211
money-weighted rate of return, 53
risk-adjusted performance, 59
sample selection bias, 271–272
style analysis correlations, 337–338
time-weighted rate of return, 53, 54
Performance attribution, 538–541, 542–549
Performance measurement
Bayes’ formula for, 184
correlations among measures, 342–343, 343n, 346–347
free cash flow explained, 429–431
holding period return, 51–52
linear regression hypothesis testing, 362–364
money market yields, 59–64
money-weighted rate of return, 46, 52–53
MSCI EAFE Index, 210
mutual fund regression analysis, 367–369, 369n, 396–398, 396n, 420–421
Sharpe ratio for, 127, 128
time-series data for, 460–461
time-weighted rate of return, 53–59
tracking error, 210
Periodic rate of return, 60
Permutations, 191, 191n
Perpetuities, 13, 24–26
Persistence of returns, 157–159
Platykurtic distributions, 134, 135
Point estimators, 258–259
Populations
definition, 71, 221n
hypothesis definition, 283
nonparametric tests, 314–318
parameter confidence intervals, 258, 260–268, 283
parameter point estimators, 258–259, 260, 283
parameters, 71, 87, 115
parameters in Greek letters, 284n
parameters via samples, 248
parametric tests definition, 314
population mean, 86–87, 221, 221n, 283
population mean and ANOVA, 292n
population mean confidence intervals, 261–268
population mean hypothesis tests, 292–308
population median, 91n
population mode, 93n
population regression coefficient, 399–402
population standard deviation, 114–116, 221, 293
population variance, 114, 115–116
population variance known, 297, 297n, 308–313
population variance unknown, 262–265, 293–297, 299–308
samples versus, 71
sampling more than one, 252–253, 372
underlying samples, 248, 249, 253–254, 255n, 256–257
Portfolio expected return
arbitrage pricing theory, 528–529, 530–532
calculation of, 176, 181
Carhart four-factor model, 532–533
as function of individual securities, 174
as measure of reward, 175
variance and, 175–180
Portfolio returns
hypothesis testing comparisons, 301–302, 306–308
joint normal distribution, 219
performance (see Performance measurement)
safety-first rules, 224–226
Portfolio standard deviation of return, 181–182
Portfolio variance of return
covariance, 176–180
as function of individual securities, 174
as measure of risk, 175, 176
well-diversified portfolios, 528
Positive serial correlation, 415, 417n, 471n
Positive skew, 129, 131, 132
Posterior probability, 186
Power of a test, 287, 287n
Prediction errors, 478n
Prediction intervals, 369–372, 399
Present value
compounding frequency and, 18–19
discount rate and, 18, 62–63
future value equivalence, 35–37
money-weighted rate of return, 46, 52–53
series of cash flows, 19–27
single cash flow future value, 4–13
single cash flow present value, 16–19
solving for annuity payment size, 31–35
solving for growth rate, 28–30
solving for interest rate, 27–28
solving for number of periods, 30–31
Price
arbitrage pricing theory, 527–533
Asian call options, 233–235
binomial model for, 204–205, 206–208, 212–214
bond pricing, 201
capital asset pricing model, 526–527 (see also Capital asset pricing model)
Center for Research in Security Prices, 272
fundamental factor models, 534, 537–541
heteroskedasticity and models, 410
lognormal distributions for, 213, 227, 228–230
as random variable, 201, 228
stock return and price relationship, 228–230
Priced risk, 527
Price relatives, 228, 229
Price-to-book ratio (P/B), 271–272, 532
Price-to-earnings ratios (P/Es)
arithmetic mean analysis, 92–93
definition, 92
earnings per share correlation, 93
fundamental factor models, 534
linear regression explaining, 348
median analysis, 92–93
nonstationary, 509n
stock market returns and, 509
Principal, 4
Principal components models, 534
Prior probabilities, 185, 188
Probability
addition rule, 159–161
a priori probability, 154
Bayes’ formula, 184–188
conditional probability, 156–159, 156n, 160–161
correlation, 174–183 (see also Correlation)
counting, 188–191, 207
covariance, 174–183 (see also Covariance)
default risk premium, 173–174
definition, 153
Dutch Book Theorem, 156, 156n
empirical probability, 153–154
estimation via normal distributions, 226 (see also Estimation)
events, 152, 153 (see also Events)
expected value, 98, 166–169 (see also Expected values)
inconsistent probabilities, 155–156, 156n
inverse probability, 184
joint probability function, 181–183
Probability (continued)
likelihoods, 185
limit order execution, 160–161
marginal probability, 156, 156n
Monte Carlo simulations, 200 (see also Monte Carlo simulations)
multiplication rules, 157, 159, 161, 162–163
objective probabilities, 154
odds of, 154–155
outcomes, 152, 153 (see also Outcomes)
perturbation probability, 186
prior probabilities, 185, 188
probability distributions, 200–214 (see also Probability distributions)
random variables, 152, 153
subjective probability, 154
sum to one, 98, 153, 166, 186, 188
total probability rule, 164–166, 169–173
tree diagrams, 169–170, 172, 205, 212–214
unconditional probability, 156–157
variance, 167
Probability density function (pdf)
definition, 202
lognormal distributions, 227
normal distributions, 218
uniform random variable, 214, 215
Probability distributions
binomial, 200, 204–214
bond price modeling, 201
cdf, 202 (see also Cumulative distribution function)
continuous uniform, 214–218
continuous vs. discrete, 201
definition, 200
discrete uniform, 202–204
discrete vs. continuous, 201
historical simulations, 238
lognormal, 200, 220–232
Monte Carlo simulations, 200, 214, 232–238
normal, 200, 218–226 (see also Normal distributions)
probability function, 202 (see also Probability function)
random numbers vs. observations, 235
r-distribution, 263 (see also r-distributions)
test statistics, 286
uniform, 200, 202–204, 214–218
Probability function
Bernoulli random variables, 204
binomial random variables, 206–211
continuous uniform random variables, 256
definition, 202
discrete uniform distributions, 202–204
Probability mass function (pmf), 202n
Probit models, 436–437, 436n
Pseudo-random numbers, 235n
Pure discount instruments, 59–60
p-value
approach to hypothesis testing, 291–292, 292n
definition, 291
for F-test, 391n
for null rejection, 359–360, 391
for regression coefficient, 391
spreadsheet calculation, 292n
Q
Q-statistic, 475n
Quadruple witching days, 313
Qualitative dependent variables, 435–437
Quantiles, 103–110
Quartiles, 103–110
Quintiles, 103–110
Quoted interest rate, 9–10
R
R^2. See Coefficient of determination; Multiple coefficient of determination
Random number generation, 204, 204n, 214, 235, 235n
Random numbers, 235, 235n, 249
Random observation generation, 235
Random observations, 235, 315n
Random sampling, 248–251
Random variables
Bernoulli random variables, 204–205
binomial random variables, 206
central limit theorem, 218, 230, 230n
continuous, 167n, 201, 202, 214–216
(see also Continuous random variables)
covariance and, 178n, 473n
covariance with itself, 178
definition, 152, 200
discrete, 167n, 200–204, 202n
discrete uniform distributions, 202–204
earnings per share as, 200
expected value, 166–169
independence definition, 183
joint probability function, 181–183
lognormal variables, 227–228
multiplication rule for expected value, 183
normal random variables, 219, 220
notation for, 201n
possible outcomes, 201
price as, 201, 228
probability distribution of, 153, 200, 202
(see also Probability distributions)
return as, 152, 200
sample mean as, 254
sample statistics as, 250, 254, 258
significance tests, 344–347
standardizing, 221
uniform, 214–216, 235
variance of, 167, 178n
Random walks
as autoregression, 485
covariance stationarity, 461, 473n, 486–489
covariance stationarity determination, 435, 489–493
definition, 435, 485
differencing, 486–489, 491–493
exchange rates as, 486
mean-reversion level undefined, 486, 489
random walk with drift, 485n, 489, 490n
random walk with drift and trend, 490n
unit root test, 489–493, 490n
Range of data
bond pricing, 201
definition, 111
frequency distribution construction, 74
interquartile range, 111n
log transformations for wide ranges, 394n
risk evaluation, 112–113
Ranked data, 314–318
Rates of return
as continuous random variables, 201
frequency distributions for, 74–81
geometric mean for compound, 30n, 98, 102
interest rates, 2
internal (see Internal rate of return [IRR])
money-weighted, 46, 52–54, 56–58
stock return and price relationship, 228–230
time-weighted, 53–58
Ratio averaging, 103
Ratio scales, 72, 73
Real risk free interest rate, 3
Receivables mean number of days, 295–296,
295n
Regimes in time series, 483, 512
Regression analysis
analysis of variance, 366–369
assumptions, 351–352, 351n, 352n, 392–398
assumption violations, 408–422
autoregression (see Autoregressive [AR] models)
beta estimation, 360–362
coefficient of determination, 356–358, 402
confidence intervals, 369–372
cross-sectional data, 348, 372, 387
data nonlinearity, 425–429
data scaling, 387–391, 425, 429–431
data transformations, 387–391, 425–431
dependent variables, 347, 348
dummy variables for, 403–407
Durbin–Watson statistic, 416–418, 471–472, 471n
error term, 348, 351, 351n, 370
forecasting the past, 433
functional form of, 423–425
heteroskedasticity, 408–415, 411n, 414n, 422
hypothesis testing, 358–366
independent variables, 347, 348
limits of models, 372

Russell 2000 Value Index, 338

Safety-first rules, 224–226
Sample mean
central limit theorem, 254–258
cross-sectional mean, 88–89
definition, 87–88
distribution of, 254–258
expected value versus, 166
population mean estimation, 221, 249, 258
sample size, 255, 255n, 257
sampling distribution normality, 262
standard error of, 255, 255n, 266

Samples
definition, 71, 248
in- vs. out-of-sample forecast errors, 481–482
out-of-sample tests, 269, 423
populations versus, 71
sample period length, 483
samples pooled poorly, 431
sampling, 248–254 (see also Sampling)
sampling error, 249, 254
statistics (see Sample statistics)
Sample selection bias, 271–272, 273, 290
Sample size
autocorrelations computed and, 476n
autoregressive moving-average models, 504
central limit theorem and, 255, 257, 352n
correlation coefficient significance, 345–347
estimator consistency, 259, 434n
estimator unbiasedness and efficiency, 259
finite population correction factor, 255n, 294n
“large” meaning, 255, 255n, 262, 293n
nonnormal underlying, 255n, 293n
sampling distribution and, 259
selection of, 266–268, 266n
t-distribution, 263
Type I and II errors and, 287
z-alternative, 262
zero correlation rejection, 347n
z-test vs. t-test, 296

Sample statistics
definition, 71, 248
as random variables, 250, 254, 258
Roman italic letters for, 284n
sample correlation coefficient, 332
sample covariance, 332, 332n
sample excess kurtosis, 135–138
sample kurtosis, 135, 219n
sample mean, 87–89, 221
sample median, 91n
sample mode, 93n
sample skewness, 131–134, 219n
sample standard deviation, 117–120, 221,
230n, 293, 332
sample variance, 116–117, 118–119, 230n, 332
sample variance and degrees of freedom, 263–264
sampling distribution of, 250, 254
standard error of, 255

Sampling
bias in investment research, 268–274
bond indexing, 250–251
cross-sectional data, 253–254
data-mining bias, 268–271
definition, 248
finite population correction factor, 255n, 294n
look-ahead bias, 272, 274
out-of-sample tests, 269, 423
sample selection bias, 271–272, 273
sample size, 255, 255n, 257, 266–268
(see also Sample size)
sampling distribution of statistic, 250, 254
(see also Central limit theorem)
sampling error, 249, 254
sampling plan, 249, 251
simple random sampling, 248–250
stratified random sampling, 250–251
survivorship bias, 271–272, 273
time-period bias, 272–273, 274
systematic sampling, 249
time-series data, 251–253
underlying nonnormal, 255n, 256–257
underlying populations differ, 253–254

S&P 500 Index
Chebyshev’s inequality, 122–123
cumulative frequency distributions, 84–85
ever excess kurtosis, 132
expected value, 98
histograms of returns, 82, 83
holding period returns, 74–80
mean return comparison, 301–302
means vs. standard deviation, 120
portfolio expected return and variance,
175–180
positive excess kurtosis, 136
returns and inflation rate, 334–335
as sample, 248
skewness, 132
Sarbanes–Oxley Act (2002), 298–299
Scales of measurement, 72
Scatter plots
correlated data, 330, 331
definition, 328–329
economic forecast evaluation, 337, 353
EV/IC fitted regression line, 363
hetero- vs. homoskedasticity, 409
inflation rates and stock returns, 354
outliers, 334–335
regression of linear vs. nonlinear data, 427
uncorrelated data, 329, 331
Scientific method, 283, 283n
Seasonality, 499–503, 513
Selected American Shares (SLASX)
arithmetic mean, 100–101
geometric mean, 100–102
mean absolute deviation, 112–113
range, 112–113
sample standard deviation, 118–119
sample variance, 118–119
Sharpe ratio, 128
Selling short, 155n
Semideviation, 120–121
Semilogarithmic scales, 138–139
Semistandard deviation. See Semideviation
Semivariance, 120–121, 121n
Serial correlation
autoregressive models, 474–477
consequences of, 415–416, 419n, 422
consistent standard errors, 418n
correcting for, 418–419
Durbin–Watson statistic, 416–418, 417n
first-order serial correlation, 415
forecasting model steps, 513
negative, 415n, 416n, 417, 417n, 471n
positive, 415, 417n, 471n
prediction errors, 478n
regression analysis, 415–419
residuals in time-series models, 476n
testing for, 416–418, 416n
trend models, 471–472, 471n
Sharpe ratio
confidence interval for population mean of,
262–263, 265
definition, 111, 126, 252
exchange traded funds vs. T-bills, 126–127
negative, 127
performance measurement, 127
safety-first ratio similarity, 225
Shortfall risk, 224–226
Shorting stock, 155n
Short-term debt markets, 59–64
Significance level
linear regression hypothesis testing, 359–360
p-value, 291–292, 292n, 359–360, 391
specifying, 286–287
Significance tests
correlation coefficient, 344–347
heteroskedasticity and, 408
t-test of significance, 359
Sign test, 314
Simple interest, 4, 60
Simple linear regression. See Linear regression
Simple moving average, 494–496, 496n
Simple random sampling, 248–250
Simulation, 200, 214, 232–238
Skewness
binomial distributions, 207
calculating, 131–134
definition, 70, 129, 131
lognormal distributions, 207
normal distributions, 129, 130, 207, 218, 219
option returns, 220
Pearson coefficient of skewness, 129n
sample skewness, 131–134, 219n
S&P 500 Index, 132
variance vs. semivariance, 121
Small-capitalization stocks
Carhart four-factor model, 532–533
mean annual returns, 110
month-of-year effects, 404–405
returns of, 340–341, 532
Russell 2000 Index, 126, 338
Spearman rank correlation coefficient, 315–317
Spreadsheets

mean absolute deviation, 112–113
range, 112–113
sample excess kurtosis, 136–138
sample standard deviation, 118–119
sample variance, 118–119
Sharpe ratio, 128
skewness, 132–134
T-tests
bivariate normal distributions, 315n
heteroskedasticity and, 408
hypothesis testing of differences between means, 300–308, 314
hypothesis testing of single mean, 292–297, 314
hypothesis testing with linear regression, 358–359, 358n
paired comparisons test, 304–308
p-values via spreadsheet function, 292n
robustness, 293
t-test of significance, 359
z-tests versus, 296, 296n
Two-tailed hypothesis tests
definition, 284
instead of one-tailed, 388n
p-value, 292
rejection points, 288–289
significance level and confidence interval, 290
Type I errors (α), 286–287, 416
Type II errors (β), 286–287
U
Uncertainty
  error term of regression, 370
  forecasting via time-series models, 512
  multiperiod forecasts, 478
  regression analysis, 354–356, 399
Unconditional heteroskedasticity, 410–411
Unconditional probability, 156–157, 156n, 164–166
Underlying assets, 230, 230n
Underlying populations
  nonnormal, 255n, 256–257, 293n
  samples from differing, 253–254
  sample statistics estimates of, 248, 249
Unequal cash flows, 15–16, 26–27, 32–35
Uniform distributions, 200, 202–204, 204n, 214–218, 235
Uniform random variables, 214–216, 235, 256–257, 256n
Unimodal distributions, 93
United Kingdom
  consol bonds, 24
  equivalent annual rate, 12n
  Treasury bills, 3n
United States (US)
  annual percentage yield, 12n
  CPI model, 478–480 (see also Consumer Price Index)
  T-bills (see US Treasury bills)
US Treasury bills
  bank discount basis, 59–60, 62–63
  correlation of bonds and T-bills, 346
  discount, 59
  effective annual yield, 61–63
  exchange traded funds versus, 126–127
  face value, 59
  holding period yield, 61, 62
  international equivalents, 3n
  liquidity premium, 3
  as pure discount instruments, 59–64
  regressing on predicted inflation, 411–413, 414, 417–419, 432–433, 434–435, 508
  risk-free interest rate, 3, 127, 173, 412n
Unit normal distribution, 220
Unit root test, 489–493, 507–512, 510n
Univariate normal distributions, 219
Up transition probability, 212–213
Utility functions, 224n
linear regression hypothesis testing, 362–364
multiple linear regression for, 393–396
predicting EV/IC ratio, 370–371
Tobin’s q, 394–396, 398–399
Value/growth investment style, 108–110
“Value” stocks, 532–533
VAR (value at risk), 226, 233
Variance
  Bernoulli random variables, 211, 211n, 212
  binomial random variables, 211
  conditional variances, 171
  confidence intervals, 309n
  constant plus random variable, 178n
  constant times random variable, 178n
  covariance, 176–180
  covariance effect on, 178
  definition, 113–114, 167, 211n
  diagonal vs. off-diagonal, 178, 178n, 179
  differentiation of, 112n
  earnings per share forecast, 168
  forecast model errors, 481–482
  hypothesis testing on single variance, 308–310
  hypothesis testing on two variances, 310–313
  lognormal distributions, 227–228
  multiperiod vs. single-period forecasts, 478n
  multivariate normal distributions, 219
  normal distributions, 129, 219
  own covariance as, 178
  population variance, 114, 115–116
  population variance known, 297, 297n
  population variance unknown, 262–265, 293–297, 299–308
  portfolio expected return and variance, 175–180
  random variables, 167, 168
  returns pre- and post-crisis, 312–313
  as risk measure, 111, 120, 121
  sample variance, 116–117, 118–119, 230n, 332
  semivariance, 120–121, 121n
  stationarity, 229n, 252 (see also Stationarity)
  unconditional variance, 171n
Volatility
  definition, 230, 230n
  option pricing models and, 230, 231–232
  pre- and post-crisis, 312–313
  quadruple witching days, 313
  well-diversified portfolios, 528
W
Weakly stationary. See Covariance stationary
Weighted average cost of capital (WACC), 44n, 362–364, 370–371
Weighted averages of portfolio return, 219
Weighted mean
  arithmetic mean as, 96n
  expected value, 98, 166–169
  harmonic mean as, 103
  market indexes as, 98
  mean returns, 95–98
  portfolio expected return as, 175
  total probability rule, 164–166
  weights sum to one, 165–166, 176, 181
White-corrected standard errors, 414n
Wholesale clubs, 86n
Wilcoxon signed-rank test, 314
Winsorized mean, 90n
Working capital management, 44

Y
  Yield to maturity (YTM), 46, 63–64

Z
  z-alternative, 262–263
  z-distributions. See Standard normal distributions
  Zero coupon bonds, 173–174
  z-tests
    hypothesis testing, 286, 288–289, 297–299, 314
    p-value via spreadsheet function, 292n
    rejection points, 296, 297–298
    t-tests versus, 296, 296n
