Cochrane Collaboration (continued)
51; origins and description of, 7, 8

Cochrane Handbook of Systematic Reviews of Interventions (Higgins and Green): best practice guidelines for literature review in, 28, 51, 65–66; on best practice of recording data onto paper coding forms, 95; on description of coding effect sizes, 70; on meta-analysis used for studies rather than reports, 69

Cochrane Reviews, 8
Code books, 86
Code sheets, 86
Coded data: “low inference,” 94; managing, 94–97
Coders: assessing the performance of, 93–94; qualifications of, 89–91; training, 92–93
Coding: decided what data in include, 70–85; description of, 21; elements of research design and study quality, 78–80; information for effect sizes and effect size variances, 74–76; issues to consider for, 68–70; “low inference” codes, 94; with missing data, 83–84; moderator variables from multivariate models, 81–82; process of, 85–97; scientifically interesting moderator variables, 76–78. See also Data
Coding forms: using paper vs. computerized, 95t; sample, 98–101e
Coding instructions: code books and code sheets, 86; iterative process to develop, 88–89; preserving a hierarchical data structure, 87; unique identifiers in, 86–87
Coding process: developing instruments, 86–89; managing coded data, 94–97; selecting and training coders, 89–94
Cohen’s kappa, 64–65
Cohrane Reviews, 8
Collinearity: performance of the FAT as N, measurement error, and, 278–281; REMR (random effects meta-regression), 187–188; size of FAT, varying, 282t
Colorado Congress of Parents, Owens v., 318
Combining effect sizes: calculating average effect sizes, 127–131; describing effects sizes, 131–137; issues to consider for, 124; weight effect sizes, 125–127
Complier Average Causal Effect (CACE), 91
Comprehensive Meta-Analysis (CMA), 163
Compstat program (NYC): description of and crime reduction goal of, 356–357; “hard” empirical literature on, 364–365; meta-regression results on, 386; stratified meta-regression of, 394–397
Concept-indicator problems: description of, 44; meta-analysis as requiring an adequate appreciation of, 44–45
Conceptual hypotheses: conceptual definitions developed for, 43–46; description of, 43
Conceptualizing a meta-analysis: accounting for variation in effect sizes, 46–50; hypotheses, 42–46; identifying quantity of interest/conceptual model for, 40–50; research questions, 41–42
Conference of the National Association of Schools of Public Affairs and Administration (NASPAA) [2010], 16
Conference reports, 61
Correlation coefficient r, 105–109
CRVE standard errors: hypothesis tests in REMR using WCB and, 205t; limitations of, 199–200; restricted manual WLS REMR in Stata with, 205t fg “Culture of poverty,” 405–406 Cumulative meta-analysis: conducting a, 134–137; description of, 131

D
D-based effect sizes: corrected standardized mean difference: Hedges’s g,
113–114, 117; formulas for, 116; overview of, 110–111; standardized mean difference, 111–113

Data: coding with missing, 83–84; effect-level information, 72–74; search-level information, 70–71; study-level information, 71–72. See also Coding

Data structure: cross-sectional, 80; pooled cross sections, 80; time series, 80; true panel, 80

“Delta-splitting” method, 209

Dependence: choosing between GEE and CRVE in meta-regression to address, 225–226; choosing between HLM and CRVE in meta-regression to address, 214–217; delta-splitting approach for addressing, 227–229; GEE (generalized estimating equations) to address meta-regression, 218–226; HLM (hierarchical linear models) for addressing meta-regression, 208–213

Dependent variables: effect sized employed as, 20; meta-regression design using, 144–145

Difference of means, 79

Division of Program Evaluation and Methodology (GAO), 15

“Double coding,” 94

E

EBSCO (Academic Search Premier), 53, 56, 58, 59

EconLit, 61

Economic and behavioral life outcomes: cultural theories of poverty on, 405–406; human capital approaches to poverty and, 406; poverty deconcentration policies study of impact on, 408–438; social capital theory on poverty and, 406–407

Economics research:
- FAT-MST-PET-MRA meta-analysis applied to, 268–308; poverty deconcentration policies study, 408–438; publication bias found in, 268–269
- The Economist’s Voice, 56

Education performance management, 389

Educational voucher data analysis: average effect sizes for effects of vouchers, 335–337; publication bias, 337–339; study-level cumulative meta-analysis of effects on student achievement, 336–339

Educational voucher effects: accounting for variability in, 326–331; choosing a measure of academic achievement to assess, 324; defining, 319; designing a meta-analysis of, 324–331; estimating Complier Average Causal Effect (CACE), 326; estimating intent to treat (ITT), 325–326, 331; estimating treatment on the treated (TT), 325–326, 331; reviewing specific programs and, 319–324; studies coded for meta-analysis of, 349–351

Educational voucher meta-regression analysis: accounting for variation in effect sizes, 339–342; average effects of vouchers in the baseline scenario, 343; characteristics and quality of original studies, 341–342; characteristics of outcome measures, 339–341; characteristics of the baseline scenario, 342; effects of outcome measures on effect sizes, 343–345; effects of student characteristics on effect sizes, 345–346; effects of study design and quality on effect sizes, 346–347; effects of voucher program design on effect sizes, 346; estimated effect sizes under various scenarios, 347–348; estimating the meta-regression models, 342–348; random effects results using CRVE and GEE, 344–345

Educational voucher programs: alternatives to, 313; a brief history of U.S., 316–318; Cleveland Scholarship and Tutoring Program,
Educational voucher programs (continued)
316–317, 320–321; considering the debate over, 311–312; description of, 313; Florida Opportunity Scholarship Program, 317–318; Indiana’s, 317; linking vouchers to student achievement, 313–315; list of search engines, organizations, and sites searched for studies on, 332; listed by state (2011), 314; Milwaukee Parental Choice Program, 316, 319–320; as one element of school choice, 312–316; searching the literature on, 331–334; Washington, DC Opportunity Scholarship Program, 317, 321. See also School choice

Effect size variances: coding information for, 74–76; estimating random effects variance component, 124; explaining differences across original studies, 22; formulas for $r$-based and $d$-based, 116; in public management and policy effect sizes from other fields, 482–483; questioning what accounts for, 141–142

Effect sizes: assessing heterogeneity of, 121–124; average, 18–19; calculating, 103–118; coding information for, 74–76; combining, 124–137; comparing public management and policy from other fields, 482–483; data coding considerations of, 21; definitions of, 18, 69; differences in the goals of, 34; fixed, 118–120; meta-analysis adapted for public management and policy, 33–34; meta-analysis stage of calculating and combining, 22; meta-regression models explaining variation in, 20; moderator variables influencing magnitude of, 19; publication bias consequences for estimates of, 236–238; quality of interest represented by, 46–50; random, 120–121; represented by quantities of interest, 46–47; statistical technique used to generate, 79–80; types, heterogeneity, number of, 33–34. See also Quality of interest; specific studies

Effect sizes calculations: average effect sizes, 127–131; $d$-based effect sizes, 110–114, 116; formulas for converting between effect sizes in meta-analysis, 117; issues to consider for, 103–105; odds-based effect sizes, 114–116; outcomes a hypothetical experiment with binary treatment and outcomes, 115; $r$-based effect sizes, 105–110, 116; summarizing, 116–118

Egger test: alternative tests for publication bias other than, 250–251; criticisms for publication bias, 245–250; critiques of applying it to the FAT, 273–274; for funnel plot asymmetry, 245; Stata metabias command to conduct, 252

Endogeneity, REMR (random effects meta-regression), 188–189

Endogenous variable, REMR (random effects meta-regression), 188

Environment tobacco smoke (ETS) report [EPA], 16

ERIC, 58

Ethnic differences. See Racial/ethnic differences

Evidence-Based Child Health, 8

Ex post endogeneity controls: differencing, 80; fixed effects, 80; instrumental variables, 80; matching, 80; regression discontinuity, 80

F

Fail-safe N: description of the, 253; Gleser and Olkin’s application of, 255–256; Orwin’s attempt to improve utility of, 255; remedying publication bias using, 253–255

FAT-MST-PET-MRA: assessing the, 272–291; critiques of
the Egger test applied to, 273–274; estimating the magnitude of “true” effects using the PET, 292–307; identifying “true” effects using the MST, 291–292; increasing the quality of meta-analysis using, 9; meta-regression, 269–272

FAT-MST-PET-MRA assessments: baseline simulations estimating size of the FAT, 279t; estimating the magnitude of the “true” effect using PET, 272; of FAT as test for publication bias, 272–291; of performance of the augmented FAT, 288–291; of the performance of the FAT, 274–275; performance of the FAT as N, measurement error, and collinearity vary, 278–281; performance of the FAT under effect size heterogeneity, 281–283; performance of the FAT under ideal conditions, 278; of performance of the MST under conditions of effect size heterogeneity, 292t; of previous assessments of the FAT, 275–277; simulation structure for assessing performance of the FAT, 277–278; size of augmented FAT with effect size heterogeneity, 290t; size of FAT, varying collinearity, 282t; size of FAT, varying sample sizes and measurement error in Y for, 280t–281; as test for publication bias, 270–271; testing for “true” effects using MST, 271–272; why does FAT perform so poorly under effect size heterogeneity?, 283–288

FAT-MST-PET-MRA estimating: the magnitude of the “true” effects using the PET, 292–307; performance of the PET with heterogeneous effect sizes, 299–304; performance of the PET with homogeneous effect sizes, 296–299; performance of the PET with identical measurement of Y and X, 295–304; performance of the PET with varying measurement of Y and X, 304–307

FEML (maximum likelihood estimator): comparing REML to, 174; description of, 174

FEMR (fixed effects meta-regression): advantages of REMR over, 171–172; difference between SUVTA and, 172; estimating the fixed effects model in, 151–154; goodness of fit in, 161–163; hypothesis testing in, 154–157; interpreting results in Stata, 168–170; poverty deconcentration outcomes study random effects vs., 417–422; power analysis in, 160–161; prediction and, 158–159; in Stata, 163–170; WLS (weighted least squares) estimation of, 153–154, 165–168/fg. See also Meta-regression models

FileMaker Pro, 95

Fisher’s Z: calculating, 109–110; fixed effects meta-regression using, 164; formulas for converting between effect sizes, 117/fg; performance management data analysis using, 372–373; PMS-performance studies use of, 455–457; Poverty deconcentration outcomes study use of, 429–430; weighting fixed effects inverse variance weights, 125. See also R-based effect sizes

Fixed effects models; assessing effect size heterogeneity using random or, 121–124; definition of, 18; meta-analysis using approach of, 118–120; meta-regression, 151–170; weighting fixed inverse variance, 125

Florida Opportunity Scholarship Program, 317–318

Focal predictors, 17

Forward citation search, 54

Funnel plots: asymmetric funnel plot of effect size against effect size standard error, 241/fg; description of, 238–239; Egger test for funnel plot asymmetry, 245/fg; identifying publication bias using, 238–243; measuring effects of school vouchers on student testing, 337/fg–338/fg; performance management analysis using, 378/fg; poverty deconcentration outcomes study publication bias, 418,
Funnel plots (continued) 421–422, 425/fg, 426/fg; PSM-performance relationship study, 461–462/fg; of 680 effect sizes coded from environmental justice literature, 252/fg; symmetric contour funnel plot with significance bands, 242/fg; symmetric funnel plot of effect size against effect size standard error, 240/fg; tests for funnel asymmetry, 243–245

G

Galbraith plot. See Radial plot

Gautreaux housing program: list of search engines, organizations, and sites searched for on, 414/fg; literature review on, 409–410; policy origins of the, 399, 400, 401; poverty deconcentration policies study on impact of, 408–438

Gautreaux/poverty deconcentration outcomes study: analysis of data, 416–426/fg; conclusions from the, 436–438; literature search on, 413–416/fg; meta-regression analysis of, 426–426/fg; research frame used for, 412–413

GEE (generalized estimating equations): addressing REMR dependence using, 218–226; choosing between CRVE and, 225–226; to estimate REMR, 207; for generating effect size, 80; performance management meta-regression estimation using, 380;

poverty deconcentration outcomes study use of, 435t–436t; PSM-performance relationship study use of, 463–464, 468; of REMR with exchangeable correlation matrix and empirical variance estimates, 225/fg; of REMR with independent correlation matrix and empirical variance estimates, 224/fg; simple introduction to, 218–222; using Stata for, 222–224. See also Estimation

GLS (generalized least squares): FEMR (fixed effects meta-regression) estimated by, 152; REMR (random effects meta-regression) estimated by, 152

Goodness to fit: FEMR (fixed effects meta-regression), 161–163; REMR (random effects meta-regression), 176–177, 181

Google Scholar, 59; number of “meta-analysis” articles by title by, 6/fg; number of publications (1990–2011) referring to meta-regression using, 143/fg

Government Performance and Results Act (GPRA), 11, 355, 357, 358–359

Government reports sources, 60

GPRA Modernization Act (2010), 16

Grey literature: archives of, 61; conference papers sources, 61; developing search strategy for, 60–61; dissertations and theses sources, 61; government reports sources, 60; preventing publication bias by including, 265–266; reports from public policy research firms or think tanks, 60; working papers, 60–61

H

Harvard University’s Program on Education Policy and Governance (PEPG), 315, 321

Head Start studies, 69

Hedges’s g, 113–114, 117/fg

Heterogeneity: assessing performance of the MST under conditions of effect size, 292t; assessing why FAT performs so poorly under effect size, 283–288; performance of the FAT under effect size, 281–283; size of augmented FAT with effect size, 290t; size of FAT with effect size heterogeneity in original studies, 284t; testing REMR (random effects meta-regression) for residual, 175

Hippocratic Oath—first do no harm, 479

HLM (hierarchical linear models): comparing to OLS regression, 209; to estimate REMR, 207; estimated using restricted maximum likelihood, 209–210; for generating effect size, 80; in meta-regression, 210–213; overview of, 208

Holmes, Bush v., 318

HOPE VI (Housing Opportunities for People Everywhere): list of search engines, organizations, and sites searched for on, 414/fg; literature review on, 411; origins of, 400–401; poverty deconcentration policies study on impact of, 408–438; research
frame of poverty deconcentration outcomes study on, 412–413
HOPE VI/poverty decentralization study: analysis of data, 416–426/fig; conclusions from the, 436–438; literature search on, 413–416/fig; meta-regression analysis of, 426–436; research frame used for, 412–413
Housing Act (1937), 399. See also Public housing
Housing Choice Voucher Program. See Moving to Opportunity (MTO)
HUD (U.S. Department of Housing and Urban Development), 400, 401
Human capital theory on poverty, 406
Hypotheses: conceptual and operational definitions in, 43–46, 45t; meta-analysis, 42–43; operational, 45–46; performance management outcomes measures and key, 366–368. See also Null hypothesis
Hypothesis testing: conducting REMR testing in Metareg, 181–182; fixed effects meta-regression, 154–157; how meta-analysis improves, 11–12; performance management, 367–368; REMR (random effects meta-regression), 175–176
I
$\text{I}^2$ statistic, 162
IBSS, 56, 57t
Independent variables: focal predictor label of, 17; performance management meta-regression analysis, 381–382; poverty deconcentration outcomes study meta-regression analysis, 427–429
Individual parameters testing REMR, 175
Information Retrieval Policy Brief (Rothstein, Turner, and Lavenberg), 51
Institute of Educational Sciences, 9
Intercoder correlation coefficient (ICC), 93–94
International City/County Management Association (ICMA), 355
Inverse variance weight: estimating random effects, 124; fixed and random effects, 125; in practice, 125–127
Jackson v. Benson, 316
Job Training Partnership Act, 365
Job training programs: forest plot of performance management research on, 375t/fig; performance management meta-regression analysis on, 389t; performance management of, 365
Joint hypothesis testing: FEMR (fixed effects meta-regression), 175–176; REMR (random effects meta-regression), 175–176
Journal of Economic Literature (JEL), 23
The Journal of Economic Perspectives, 2
Journal of Economic Surveys, 23
The Journal of Evidence-Based Medicine, 8
Journal of Policy Analysis and Management, 2, 55

K
Keywords: identifying natural language, 52–53; identifying search profile, 52–54

L
Latino/a poverty rates, 404
Least squares regression, 79
Legislation: Government Performance and Results Act (GPRA), 11, 355, 357, 358–359; GPRA Modernization Act (2010), 16; Housing Act (1937), 399; Job Training Partnership Act, 365; No Child Left Behind (NCLB), 362, 377, 380; Worker Investment Act, 365
Lexis-Nexis Academic Universe, 56, 57t, 59
Lipsey, Mark W., 15
Literature reviews: Cochrane Handbook on best practice guidelines for, 28, 51, 65–66; comparing meta-analysis and traditional, 23–24; Gautreaux housing program, 409–410; HOPE VI, 411; Moving to Opportunity (MTO), 410–411; poverty deconcentration outcomes study, 409–411, 413–416; PSM-performance relationship study, 447–450; traditional approach to null hypothesis by, 24
Literature search: bounding the, 54–55; comparing meta-analysis and traditional, 23–24; conducting in meta-analysis, 50–66; on educational voucher programs, 331–334; identifying original studies, 51–61; issues to consider for, 50–51; judging the acceptability of original studies, 51–61; judgment of meta-analysis, 50–66; Cumulative number of articles in JSTOR database since 1980 on, 7; description and uses of, 476–479; in economics, 268–308; of education voucher effects, 324–331; examining the future in public management and policy research of, 475–486; Google Scholar references to titles with, 66; greater certainly and better understanding of knowledge benefits of, 479; higher-quality original studies now available for, 480; increased practitioners' requests for, 481; institutionalization of, 5–9; introduction to, 4–5; maturation of the statistics of, 480; poverty deconcentration outcomes study, 416–426; public management and policy role for, 9–17; questions to ask on public management and policy scholarship use of, 476–478; right time for scientific research to embrace, 3–4; as topic category referenced in SSCI, 5–6; understanding the basics of, 17–31. See also Scientific research

Meta-analysis applications: adaptation for public management and policy, 31–34, 481–484; used to aggregate knowledge of public management and policy, 485; comparing traditional literature search and, 23–24; conceptualizing a, 40–50; conducting a literature search in, 50–66; cumulative number of articles in JSTOR database since 1980 on, 7; description and uses of, 476–479; in economics, 268–308; of education voucher effects, 324–331; examining the future in public management and policy research of, 475–486; Google Scholar references to titles with, 66; greater certainly and better understanding of knowledge benefits of, 479; higher-quality original studies now available for, 480; increased practitioners' requests for, 481; institutionalization of, 5–9; introduction to, 4–5; maturation of the statistics of, 480; poverty deconcentration outcomes study, 416–426; public management and policy role for, 9–17; questions to ask on public management and policy scholarship use of, 476–478; right time for scientific research to embrace, 3–4; as topic category referenced in SSCI, 5–6; understanding the basics of, 17–31. See also Scientific research

Meta-analysis criticisms: garbage in, garbage out, 27–28; selectivity bias, 28; that it cannot be used to combine results from multivariate models, 29–31; that meta-analysis sacrifices nuance and context, 28–29; you can’t compare apples and oranges, 25–27

Meta-Analysis of Economics Research Network (MAER), origins and description of, 7, 9

Meta-analysis stages: stage 1: scoping, 21; stage 2: literature search, 21; stage 3: data coding, 21; stage 4: calculating and combining effect sizes, 22; stage 5: explaining differences in effect sizes across original studies, 22; stage 6: identifying areas for future research, 22–23

Meta-analysis vocabulary/language: average effect size, 18–19; effect size, 18; fixed and random effects models, 19; focal predictor, 17; meta-regression, 20;
moderator variables, 19; original studies, 17

Meta Regression Analysis (MRA):
description of, 197; performance management, 379–390, 394–397; poverty deconcentration outcomes study, 426–436

Meta-regression design:
complications in, 147–151; dependent variables used in, 144–145; effect size heterogeneity in, 148–149; mediating variables in, 144, 147; moderator variables used in, 20, 144, 145–147; non-independence observations in, 149–151

Meta-regression models:
alternatives for addressing dependence in, 207–229; Birge ratio ($R_B$), 162; choosing between HLM and CRVE in, 214–217; clustered robust estimation in, 193–207; definition of, 20; designing, 144–151; educational voucher evaluation, 339–348; estimating the fixed effects model, 151–154; for explaining differences in effect studies across original studies, 22; FAT-MST-PET-MRA approach to, 269–272; goodness of fit, 161–163; historical development of, 142–144; hypothesis testing, 154–157; $I^2$ statistic, 162; issues to consider in, 191–193; multi-level clustering in, 206–207; number of publications referring (1990A2011) to, 143/fg; performance management, 379–390, 394–397; power analysis in meta-regression, 160–161; prediction and meta-regression in, 158–159; pseudo-$R^2$, 163; public management and policy application of, 191–229. See also FEMR (fixed effects meta-regression); REMR (random effects meta-regression)

**Metacum command**, 134–136

**Metan command**, 131–134

**Metareg command**: conducting REMR hypothesis testing in, 181–182; interpreting REMR results in, 178/fg–179/fg; REMR using MOM (method of moments), 184–187/fg; unable to estimate CRVE random effects meta-regression model, 197. See also Stata software

**MetaWin**, 163

Method assignment to treatment group: multiple methods, 80; nonrandom, other, 80; nonrandom, post hoc matching, 80; nonrandom, self-selection, 80; random assignment after matching, 80; simple random assignment, 80
