Summary, 419

Supplier-induced demand: definition, 46; health expenditures and impact of, 87; target income hypothesis and, 85–87

Supplies, with cause and effect template, 139

Supply: definition, 66; medical services demand and, 73–74

Supply curve: economics of health care markets and, 80–82; self-pay, no health insurance, 81; supply and demand for physician visits, 81

Suppression, 548

Surgeries, 459; cardiac, 257–258, 270; mortality rates of bariatric, 18; variation in surgical rates, 44; wrong-site, 121. See also specific surgeries

Surgical Care Improvement Project (SCIP), 104

Surgical coding example, accuracy of:
calculate control limits, 276–277;
calculate descriptive statistics, 276;
collect data, 275–276; errors in surgical coding, 276; graphing performance, 277–279; interpreting performance, 279; investigate instability and improve as needed, 279–280; np chart for nonconforming surgical claims, 279; p chart for surgical coding accuracy, 278

Surgical mortality, 342

Surplus, consumer, 81, 83

Suspension, of licenses, 66–67

Swayne, L. E., 385, 526–527

Swiss cheese model, 166

Symbols, common flowchart, 147

System performance. See Statistical process control, for monitoring system performance

System thinking: black box process and, 29; definition, 27; outcome and, 30–31; system model, 28, 31–33; white box process and, 29, 30
Index 589

Systems: commonly implemented system changes, 400; definition, 4; designing better, 398–403; general system theory, 374–383; health care, 541; human error rates with, 401; legal, 226; mitigation, 387; Reason’s system reforms, 549; risk adjustment, 504–505; scoring APS in APACHE II, 504–505; with statistical inference and system state, 225; structure of Medicare MS-DRG reimbursement, 491–492; view, 374; why systems don’t product expected outputs, 219

T
Target income hypothesis: definition, 46; supplier-induced demand and, 85–87
Technical safeguards, 199
Techniques, mitigation, 396
Telemedicine, 460–461
Temperature: of human body, 219–220; response and, 220
Test statistic, 338
Testing, 465; as essential ingredient for quality improvement, 20; sensitivity and specificity with lab, 55–56
Tests, uses of statistical, 334
Texas, 67
Theories: capture theory of regulation, 65; general system, 374–383; germ, 14; public interest theory of regulation, 65; quality management, 52; tools, outcomes and, 54
Thinking. See System thinking
Third-party payment, 84
Thornlow, D. K., 70
Three Faces of Quality, 2, 51–54, 549
Throughputs, 28, 379–380
Thyroid surgery complications application, SPC and, 291–292
Time, scheduled, 267
“Time to Go Public on Performance?” (Marshall), 473
Timeliness, 7
Timing, tools to identify solutions, 148
Tinkering: blood pressure, 255; blood pressure after, 256; definition, 219; SPC for monitoring system performance and, 255–257
Todd, W. E., 456–457, 459
Tomlins, R., 479, 482–483
Tonsillectomies: children and, 43; rates, 44, 45, 46
Tools: medical practice, 53; quality management, 553–556; theories, outcomes and, 54
Tools, process analysis: to identify causes, 137–146; to identify problems, 116–137; to identify solutions, 146–152; knowledge hierarchy, 114; to monitor progress, 152–155; uses of, 115
Tools, statistical, 333, 366; chi-square analysis, 335–344; means analysis, 350–354; with quality improvement and research, 362–365; with quality management and research, 334; regression analysis, 354–362; uses, 334; variance analysis, 334–350
Tools, to identify causes: cause and effect diagrams, 137–140; cause and effect example: medication error, 140–141; flowcharts, 145–146; scatter diagrams, 141–145
Tools, to identify solutions, 146; common flowchart symbols, 147; multivoting, 148–150; Q-sort, 150–152; risk, economy of effort, timing and resources with, 148; world’s flowchart capability, 148
Tools, to monitor progress: run chart, 152–155; run chart of patient falls, 153; run chart of patient falls with average, 154; run chart of patient falls with trendline, 154
Topp, R., 343
Total quality management (TQM), 21, 26, 27, 52–53
Toyota, 302
TQM. See Total quality management
Transformation processes, 30, 31
Trauma, 450
Treatments: AMI, 314–316; costs, 99–101; risk adjustment and assessing inputs,
outcomes and, 495; risk factors and, 501; selection, 48
Tregoe, B. B., 184, 186
Trends, 272
Tricoci, P., 419
Tunis, S. R., 364
Type I error, 226
Type II error, 226

U
u chart: c and, 302–312; for dietary concerns, 310; for medical record errors, 308
UK. See United Kingdom
Underuse, 37; definition, 38; overuse, misuse and, 55–56, 106; reimbursement with overuse, misuse and, 92–96
United Kingdom (UK), 85; health care costs per person, 64; MRSA, 317–319
United States (U.S.): distribution of medical spending in, 438; GDP, 38, 64; health care costs, 64, 88; health care system, 541; life expectancy in, 88; number of admissions and hospitals in, 163; number of physicians in, 163, 437
Unstable, 228, 273–274
Up-coding, 492
Upper control limits, 224, 353
U.S. See United States
U.S. Air Force, 547, 548
U.S. Army, 172
U.S. Navy, 547, 548

V
VA. See Veterans Administration
Vaccinations, allergies to, 494
Value: critical, 338; definition, 7; with manager’s role, 558–561; p-value, 347
Value chain, 373; definition, 374; failure mode and effects analysis, 383–386; health care, 385, 527; Porter’s, 384
Van Den Akker, E. H., 43
van der Schaaf, 174
Van Vuuren, W., 174
Variable control limits, 284–286
Variables: DV, 142, 336, 344, 355–356, 357, 359, 502; types, 335–336, 344
Variance, 23. See also Analysis of variance
Variations: common cause, 226; expectations with performance and, 229; hospital admissions and, 47; inherent, 226; management quality and, 551–553; natural, 226–227; outcomes improved and controlling, 57–58; small area, 37, 38; special cause, 226; in surgical rates, 44; treatment selection and, 48; types of, 226–228; Wennberg and small-area, 43–49
Venn diagram, 439
Ventilator compliance, 430
Verification safeguards, 203
