INDEX

Accelerating Rate Calorimeter . 122, 227
Accumulation ........................................25
   Percent of MAWP .....................30
Advanced Reactive System
   Screening Tool ..........................231
API Standard 521
   Protection by System Design ....41
API Standard 620
   MAWP ........................................27
API Standard 650
   MAWP........................................27
   APTAC ......................................237
   ARC ..........................................122, 227
   ARSST ......................................231
ASME BPV Code ..................24
   Block Valves .........................139
   Devices in Combination .............110
   Devices in Series .................89
   Discharge Lines ......................85
   Liquid Pressure Relief Valves 83
   MAWP ........................................26
   Pressure ..................................28
   Protection by System Design ...38
   Relief System Layout ..............81
   Rupture Disks .........................88, 106
ASME BPV Code Provisions
   Codes, Standards and Guidelines ........................................101
   In External Vessel .................481
   In Original Vessel ..................480
Automatic Pressure Tracking
   Adiabatic Calorimeter .............237
   Balanced Valves .........................50
Calorimetry ......................122, 211, 226
   Adiabatic ................................220
   Data Interpretation .................256
   Isothermal ..........................220
   Screening ................................220
   Types ..................................219
CCFlow .......................310, 325
Chemical Reactions ..............126, 213
   Kinetics ............................120, 121, 265
   Reaction Kinetics .................265
   Reaction Rates .....................218
Choked Flow .........................342
   Adiabatic Compressible Flow 363
   Ideal Gas ................................343
   Isothermal Compressible Flow 365
   Two-Phase Liquid .................345
Containment Systems .............480
   Design Options .....................482
   Disposal of Discharged Material 482
   Coupling Equation ...............183, 186
Cyclones ..................................506
   Alternate Cyclone ..................513
   Design Procedure ...................510
   Droplet Removal Efficiency ..508
   Reaction Force ......................516
   Separator Sizing Procedure ....511
   Design Flow Rate
   Rupture Disks .......................404
   Safety Relief Valves .............406
   Differential Scanning Calorimeter ........................................222
   Dimensionless Gas-Phase Velocity
      Parameter ............................182
   Discharge Coefficient .............338
   Choked Flow .........................339
   Gas Flow ................................340
   Liquid Flow ..........................341
   Two-Phase Flow .................342
Discharge Piping
   Anchors ................................428
   Pipe Size .............................428
   Real Gases .........................428
Discharge Piping, and Collection
  Headers...................................483
  Corrosion ................................484
DSC ............................................222
Dynamic Load Factor
  Dynamic Load Factor .............402
Emergency Relief Effluent Handling ........................................ 434, 470
  Absorbers........... See Scrubbers
  Atmospheric Discharge ........433
  Capital and Continuing Costs .452
  Discharging to a Common
  Collection System...............449
  Flares ............................... 473
General Strategy .....................435
  Passive or Active Systems ......447
Physical and Chemical Properties ............................................443
  Plant Geography .....................450
  Possible Condensation and
  Steam-Waster Hammer.....451
  Quench Tanks .........................464
  Selection Factors...............443
  Space Availability..............450
  Time Availability...............452
  Two-Phase Flow and Foaming ................................................................445
  Vapor-Liquid Separation.....451
  Excess Inflow .........................206
  Excess Outflow ....................206
Factors Affecting Opening Pressure ............................................35
  Constant Superimposed Back
  Pressure..............................35
  Hydrostatic Head ...................31
  Variable Superimposed Back
  Pressure..............................36
Fauske Method
  Two-Phase Flow Systems......337
  Flares ...................................473
  Elevated Flares .................475
  Enclosed Flares ..................476
  Fired or Endothermic Flares ..477
  Smoking Flares versus Smokeless
  Flares ..................................477
  Types of Flares .................474
Fluid Properties..........................115
  Data Sources .........................116
  Mixtures .............................115
  Pure-component .................116
Friction Loss ..........................353
  Exit Loss .............................359
  Expansions and Contractions .357
  Methods ..............................355
Gravity Separator .... See Horizontal /
  Vertical Separators
  Gravity Separators ..............486
  Separator Inlet Velocity
    Considerations ..................491
Header Systems ......................97
Homogeneous Two-Phase Flow
  Analytical Solution ..............374
  Solution............................369, 373
Horizontal Separators ...........492
  API Sizing Method ...............500
Loss of Heating / Cooling ......206
Low-Pressure Devices
  Gas Flow............................346
Mass and Energy Balance
  Assumptions .......................155
  Simplifications .................174
  Vessel .............................170
MAWP ........................................9, 14, 558
  Vessels with 15 psig ..........27
  Vessels with a MAWP over 15
  and less than 3,000 ............26
Maximum Allowable Working
  Pressure ............................. See MAWP
Methods of Effluent Handling ...452
  Cyclone Separators ..............462
  Dump Tanks ........................455
  Gravity Separators ..............459
  Internal Containment ...........453
  Vane Impingement Entrainment
    Separators ........................461
  Vapor-Liquid Separators ......456
Miscellaneous Relief System
  Components..........................76
Mixing Hot Volatile Liquids ......208
Multi-Component Mixture
  Equation of State Properties... 168
Redlich-Kwong Equation of State
(RKEOS) .................................. 164, 324
Mixing Rules ................................ 168
Relief Device Types
Low Pressure Relief Valves & Vents .......... 70
Rupture Disk Downstream of a Pressure Relief Valve .......... 70
Rupture Disk Types .......... 62
Rupture Disk Upstream of Pressure Relief Valve .......... 93
Rupture Disks in Series .......... 70
Relief Device Types and Operation .................................................. 42
Relief System Design .......... 13
Approach to Design ........ 15
Best Estimate Flow Rate .......... 100
Blow Through Scenario ........ 114
Discharge Coefficient .......... 103
Discharge Piping .......... 389
Experimental Design .......... 244
High Temperature Failure .......... 28
Incompressible Flow .......... 105
Limitations .......... 14
Maximum Allowable Set Pressures .......... 28
Minimum Required Relief Capacity .......... 100
Occupational Safety and Health Administration .......... 19
Reaction Forces .......... 390
Relief Valve / Rupture Disk Combination .......... 23
Relieving Capacity .......... 100
Scenario Selection .......... 111
Two-Phase Flow Calculations 102
Relief System Layout .......... 81
Bleed - Telltale .......... 92
Combination Device .......... 93
Devices in Series .......... 89
Code Requirements .......... 89
Drainage and Freeze-up Provisions .......... 99
General Code Requirements .......... 81
Installation Practices .......... 13
Low-Pressure Devices .......... 88
Material Selection .......... 97
Mechanical Integrity .......... 97
Parallel Devices .......... 383
Pressure Relief Valves .......... 83
Rupture Disk Devices .......... 88
Relief Valve Sizing .......... 311
Adiabatic Flow .......... 318
API 3% Rule .......... 316
Back Pressure Correction .......... 315
Balanced Valves .......... 322
Choked Flow .......... 318
Choked Mass Flux .......... 318
Choking .......... 342
Discharge Coefficient .......... 338
Flow Model .......... 311
Fluid Property Model .......... 312
Ideal Gas/Vapor Flow .......... 317
Incompressible Flow .......... 313
Liquid Trim Correction .......... 314
Non-Choked Flux .......... 318
Non-Ideal Gas/Vapor Flow .......... 323
Pilot Operated Valves .......... 322
Two-Phase Flow Methods .......... 325
Valve Flow Data .......... 313
Viscosity Correction .......... 315
Runaway Reaction Test .......... 121
Runaway Reaction Test Systems See Calorimetry
Runaway Reactions .......... 212
Onset Temperature .......... 264
Rupture Disk Devices .......... 60, 382
Burst Pressure .......... 23
Burst Pressure Tolerance .......... 31
Calculation Method .......... 89
Certified Flow Resistance $K_R$ .......... 101
Device Advantages /
Disadvantages .......... 77
Failure Modes .......... 40
Forward Acting .......... 62
Liquid Service .......... 53
Nozzle Model .......... 382
Pipe Model .......... 382
Relieving Capacity .......... 46
Reverse Acting .......... 60
Rupture Disk Specifications .......... 63
Rupture Disk Downstream of PRV .......... 385
Rupture Disk Upstream of PRV .......... 385
