Preface to the Third Edition  xix

PART I
Introduction to the Assessment of Adolescent and Adult Intelligence

CHAPTER 1  IQ Tests: Their History, Use, Validity, and Intelligent Interpretation  1

Outline of the Book  2
Wechsler’s Scales  3
Clinical Relevance of Theory  3
A Short History of IQ Tests  3
The Binet-Simon Scales  4
Terman’s Stanford-Binet  4
The World War I Tests  5
Wechsler’s Creativity  6
Surveys of Test Usage for Adults  7
Has Test Use Changed over the Years?  8
Test Usage of 1,500 Psychologists and Neuropsychologists  8
How Frequently Are Tests Used?  9
Administration Time and Implications for Reimbursement  10
For What Purposes Are Adults Given Intelligence Tests?  10
Conclusions  10

Validity of the IQ Construct for Adolescents and Adults  11
Prediction of Academic Achievement  12
Relationship of IQ to Education  13
IQ and Occupation  14
Prediction of Job Performance  16

The Intelligent Testing Philosophy  18
IQ Tasks Measure What the Individual Has Learned  19
IQ Tasks Are Samples of Behavior and Are Not Exhaustive  19
CONTENTS

IQ Tasks Like the WAIS-III, KAIT, and WJ III Assess Mental Functioning under Fixed Experimental Conditions 20
IQ Tasks are Optimally Useful When They Are Interpreted from an Information-Processing Model 20
Hypotheses Generated from IQ Test Profiles Should Be Supported with Data from Multiple Sources 21
Tying Together the Tenets of Intelligent Testing 22
Summary 22

CHAPTER 2 Heritability and Malleability of IQ and Attacks on the IQ Construct 24

The Heritability and Malleability of IQ 24
Heritability 24
Maternal Environment 33
Overview 35
Malleability 36
The Flynn Effect 37
The Abecedarian Project 42
Overview of Malleability of IQ 45
Attacks on the IQ Construct 46
Lazak’s Eulogy 46
The Learning Disabilities Challenge 53
Summary 59

CHAPTER 3 From the Wechsler-Bellevue I to the WAIS-III 61

Selection of the Subtests 62
Verbal Scale 62
Performance Scale 66
Item Content Changes from the W-B I to the WAIS to the WAIS-R and to the WAIS-III 69
Reliability Comparisons of the W-B I, WAIS, WAIS-R, and WAIS-III 72
Standardization of the W-B I, WAIS, WAIS-R, and WAIS-III 74
Comparison of the Construct Validity of the W-B I, WAIS, WAIS-R, and WAIS-III 76
Internal Consistency 76
Factor Analysis 78
Developmental Trends 80
Problems with Adolescent Data 82
Clinical Implications of the WAIS-III Norms at Ages 16–19 84
Overview of Developmental Trends 84
Correlations between the W-B I and WAIS, WAIS and WAIS-R, and the WAIS-R and WAIS-III 84
CONTENTS

Relationship of the W-B I and WAIS 85
Relationship of the WAIS to WAIS-R 85
Relationship of the WAIS-R to WAIS-III 87
Comparison of Systems for Classifying Intelligence
on the W-B I, WAIS, and WAIS-III 87
Comparison of IQs Yielded by the WAIS-R
and WAIS-III 89
Practical Implications of WAIS-R/WAIS-III
IQ Differences 90
Generalization from the W-B I, WAIS, and WAIS-R
to the WAIS-III 91
Studies at Ages 16–19 Years 91
Studies Focusing on Picture Completion, Picture Arrangement,
or Object Assembly 91
Factor Analysis Studies 92
Short Form Studies 92
Correlational Studies 93
Group versus Individual Interpretation 93
Conclusions 93
Summary 94

PART II

Individual Differences on Age, Socioeconomic Status,
and Other Key Variables

CHAPTER 4 Individual Differences for Adolescents and Adults
on Gender, Ethnicity, Urban–Rural Residence,
and Socioeconomic Status 96

Gender Differences 96
Global Scales 96
Gender Differences on Separate Subtests 98
Clinical Implications of Gender Differences on Mental Tasks 100
Ethnic Differences in IQ 101
Differences between Caucasians and African Americans 101
Differences between Caucasians and Hispanics 106
Urban–Rural Residence Differences 109
Generational Changes in Urban–Rural Differences 109
Residence Differences on the WAIS-R Subtests 110
Occupational Differences 111
Best Estimate of IQ Differences for Adults
in Different Occupations 111
IQ Variability within Occupational Groups 113
Occupational Status and Canonical Factors 115
Educational Attainment 115
CONTENTS

WAIS-III Mean Scores Earned by Adults Differing in Educational Attainment 115
WAIS-III Correlations with Educational Attainment 117
Relationship of Intelligence to Education on the Kaufman Tests 120
Clinical Implications of Educational Data 123
Summary 124

CHAPTER 5 Age and Intelligence across the Adult Life Span 127

Does IQ Decline with Advancing Age?
A Cross-Sectional Approach 128

Cross-Sectional Investigations of Wechsler’s Adult Scales 129
Cross-Sectional Investigations of Kaufman and Kaufman’s Adult Tests 150
Overview of Cross-Sectional Investigations 159
Cautions Associated with Cross-Sectional Investigations 161

Does IQ Decline with Advancing Age?
A Longitudinal Approach 163

Problems in Investigating Aging Longitudinally 163
Two Groundbreaking Longitudinal Investigations of IQ and Aging 167
Kaufman’s (1990, 2001) Longitudinal Investigations of Wechsler’s Adult Scales Using Independent Samples 171
Interpretation of the Aging Patterns for V-IQ versus P-IQ: Speed or Fluid/Crystallized Ability? 180
Age-Related Declines on Untimed Tasks such as Matrix Reasoning 181
Age-Related Changes on Wechsler’s Arithmetic, Picture Completion, and Picture Arrangement Subtests 181
Data from the Bonn Longitudinal Study 182
Speed versus Cognitive Ability on Digit Symbol 182
Creative Works 182
Integration of Speed, Fluid Ability, and Other Factors 183
Can Cognitive Decline Be Slowed Down? 187
Summary 189

PART III Integration and Application of WAIS-III Research

CHAPTER 6 Research on Administration, Scoring, and Relationships between Wechsler Scales 192

Administration and Scoring 192
Administration Time 192
Administration Errors 197
CONTENTS

The Nature and Frequency of Administration Errors 197
Scoring Errors 198
Implications for Administering and Scoring the WAIS-III 202
WAIS-III Stability 202
WAIS-III Test-Retest Reliability and Practice Effects 202
Alternate Forms Reliability and Stability: WAIS-III versus WISC-III 209
Summary 216

CHAPTER 7 Factor Analysis of the WAIS-III 218
The WAIS-III as a One-Factor Test 218
The WAIS-III as a Two-Factor Test 220
The WAIS-III as a Three-Factor Test 222
The WAIS-III as a Four-Factor Test 223
How Many Factors Underlie the WAIS-III? 224
Are There Two, Three, or Four WAIS-III Factors? 225
Differences in WAIS-III Factor Structure Due to Ethnicity 227
Age Differences in the WAIS-III Factor Structure 227
Comparison of WAIS-III and WAIS-R Factors 232
Comparison of WAIS-III and WISC-III Factors 232
The General Factor \( g \) 234
Subtest Specificity 235
Definition of Subtest Specificity 236
Subtest Specificity of WAIS-III Subtests 236
Evaluation of the WAIS-III 237
Kaufman and Lichtenberger (1999) 242
Sattler and Ryan (1999) 242
Summary 243

CHAPTER 8 Verbal–Performance IQ Discrepancies: A Neuropsychological Approach 244
V–P Discrepancies and Brain Damage 244
Right- versus Left-Brain Lesions 245
Wechsler-Bellevue Studies 251
WAIS Studies 251
Overlapping Samples of Patients 252
WAIS-R Studies 252
Comparison of Results for Wechsler-Bellevue versus WAIS versus WAIS-R 252
Todd, Coolidge, and Satz’s Large-Scale Study with the WAIS 253
CONTENTS

Smith's Large-Scale Investigations Using the Wechsler-Bellevue 253
Bilateral Brain Damage 254
General Conclusions regarding Studies of Brain Damage 257

The Nature of Brain Damage 258
Lesions Caused by Stroke, Head Injury, and Tumors 259
Temporal Lobe Epilepsy 263
Temporal Lobe versus Parietal Lobe Lesions 266
Frontal Lobe Lesions 266
Frontal versus Parietal Lesions 266

Acute versus Chronic Lesions 267
Fitzhugh et al.'s Study 267
Aggregated Data from Several Samples 268
Correlational Studies 269

Subtest Patterns for Left- and Right-Lesion Patients 269
Mean Scaled Scores for Patients with Focal Brain Damage 269
Discrimination between Right- and Left-Lesion Patients 270
Hemispheric Functioning: Process versus Content 274
Should V–P Discrepancies Be Used for Assessing Brain Damage? 275

Gender of Patients with Lateralized Lesions 276
Lansdell's Initial Observations 276
McGlone's Research 277
Well-Controlled Investigations 278
Inglis and Lawson's Study of Gender Differences 278
Turkheimer et al.'s Study of Gender Differences 278
Inglis and Lawson's Meta-Analysis of Gender Difference Studies 279
Bornstein and Matarazzo's Review of Gender Difference Studies 279
Snow, Freedman, and Ford's Review of Gender Differences 280
Turkheimer and Farace's Meta-Analysis of Gender Difference Studies 281
Research Issues in the Investigation of Gender Differences 283
Aggregated Data from Gender Difference Studies 283
Proposed Explanations of the Interaction with Gender 284
Summary of Evaluation of Hypotheses for Gender Differences in Lesioned Patients 292

Ethnicity of Patients with Lateralized Lesions 293
Munder's Careful Investigation of V–P Differences for Caucasians and African Americans 293
Subtest Patterns for Brain-Damaged Males by Race 294

Age of Patient Samples 296
Brain Damage in Children and in Adults 296
Empirical Analysis with Samples of Adolescents and Adults 297

Educational Level of Patient Samples 297
CONTENTS

Research Implications of Base-Rate Education Data 299
Education Level and V–P for Brain-Damaged Samples 300
Education as a Variable for Normal versus
Brain-Damaged People 300
Clinical Issues in the Interpretation of a Patient’s
V–P Difference 302
Individual versus Group Data 303
Emotional Disturbance and Diffuse Brain Injury 304
Emotional Disturbance and Lateralized Lesions 304
V–P Interpretation in the Context of Patients’ Behaviors 307
Illustrative Case Report 308
Walt H., Age 21, Head Injury 308
Summary 314

CHAPTER 9 Verbal–Performance IQ Discrepancies:
A Clinical Approach 317
Variables Believed to Be Correlates of High
Performance IQ 317
Learning Disabilities 318
Delinquency and Psychopathic Behavior 327
Bilingualism 330
Autism 332
Mental Retardation 334
Overview of Variables Believed to Be Correlates
of High Performance IQ 337
Variables Believed to Be Correlates of High
Verbal IQ 337
Psychiatric Disorders 338
Alcohol Abuse 340
Motor Coordination Problems 341
Alzheimer’s-Type Dementia 344
High Average and Gifted Intellectual Functioning
(Full Scale IQ of 110+) 350
Overview of Variables Believed to Be Correlates of
High Verbal IQ 353
When V–P IQ Discrepancies Are Meaningless 354
IQs Are Not Unitary Constructs 354
Verbal Compensation for Performance Deficit 355
Effects of Retesting 356
Illustrative Case Reports 357
Chester P., Age 17, Possible Autism 357
Robert N., Age 36, Mild Retardation 362
Summary 366
PART IV
Interpretation of the WAIS-III Profile: IQs, Factor Indexes, and Subtest Scaled Scores

CHAPTER 10 Profile Interpretation: What the Subtests Measure 369
Ways of Grouping WAIS-III Subtests 369
Factor Analysis 370
Bannatyne’s Categories 370
Horn’s Modified Fluid–Crystallized Model 371
Cattell-Horn-Carroll (CHC) Theory 372
Baltes’s Life Span Two-Component Model 373
Osgood’s Psycholinguistic Approach and the Information-Processing Approach 374
Rapaport’s Pioneering Clinical Model 376
Dean’s Individual Ability Profile 377
Guilford’s Structure-of-Intellect Model 380
Abilities Measured by the 14 WAIS-III Subtests 382
Sources and Methods for Analyzing Each Subtest 382
Vocabulary 384
Similarities 385
Arithmetic 387
Digit Span 389
Information 391
Comprehension 393
Letter-Number Sequencing 395
Picture Completion 397
Digit Symbol-Coding 399
Block Design 401
Matrix Reasoning 403
Picture Arrangement 405
Symbol Search 407
Object Assembly 408
Summary 410

CHAPTER 11 WAIS-III Profile Interpretation: Steps 1–7 412
Considerations about Profile Interpretation 412
Considerations for Applying the Interpretive Steps when Only 11 Subtests Were Administered 413
Step 1: Interpret the Full Scale IQ 414
The Role of Full Scale IQ in Profile Interpretation 415
Step 2: Are the Verbal IQ versus the Performance IQ (or the Verbal Comprehension Index versus the Perceptual Organization Index) Significantly Different? 415
CONTENTS

Step 3: Are the Verbal IQ versus the Performance IQ (or the Verbal Comprehension Index versus the Perceptual Organization Index) Differences Abnormally Large? 417
Step 4: Is the V-IQ versus P-IQ Discrepancy Interpretable? 421
Step 5: Is VCI versus POI Difference Interpretable? 426
Step 6: Determine whether the Working Memory and Processing Speed Indexes Are Interpretable 428
Step 7: Interpret the Global Verbal and Nonverbal Dimensions, as well as the Small Factors, if They Were Found to Be Interpretable 428
General Interpretation of WAIS-III Indexes 430

Verbal Comprehension Index 430
Perceptual Organization Index 430
Working Memory Factor 431
Processing Speed Factor 433

Horn’s and Bannatyne’s Systems for Interpreting Global Verbal, Nonverbal, Working Memory, and Processing Speed Dimensions 434

Assessment of Verbal Skills by the Two Approaches 435
Assessment of Nonverbal Skills by the Two Approaches 435
Assessment of Additional Skills by the Two Approaches 435
Computing Standard Scores for the Bannatyne Categories and Horn Groupings 436
Reliability of Bannatyne Categories and Horn Groupings 437
Determining Strengths and Weaknesses within Each System 437
Strengths and Weaknesses within a Cluster 440
Selecting a System 443

Characteristic Profiles in Unique Populations 445
Summary 445

CHAPTER 12 WAIS-III Profile Interpretation: Steps 8 and 9 447
Generating WAIS-III Hypotheses 447
The Nine-Step Process 448
Step 8: Interpret Significant Strengths and Weaknesses of the Subtest Profile 448
Illustration of Step 8: Ryan N. 451
Step 9: Generating Hypotheses about the Fluctuations in the WAIS-III Profile 451
Basic Tenets of the Philosophy of Hypothesis Generation 453
Introduction to WAIS-III Subtest Interpretive Tables 455
Reliability Coefficients of Shared Abilities 455
CONTENTS

How to Use Information about Shared Abilities 455
  Guideline 1 459
  Guideline 2 459
  Guideline 3 459
  Guideline 4 476
  Guideline 5 479
Summary of Sequential Approach to WAIS-III Interpretation 479
A Simultaneous Approach to Hypothesis Generation 479
  Common Configurations of the WAIS-III Verbal Scale 481
  Common Configurations of the WAIS-III Performance Scale 486
  Configurations of Both Scales 492
Illustrative Case Reports 496
  Nicole H., Age 34, Learning Problem 496
  Aimée L., Age 26, Memory Concerns 501
  Lauren J., Age 57, Decline in Job Performance 507
Summary 515
WAIS–III Interpretive Worksheet 517

PART V
Additional Measures of Adolescent and Adult IQ
CHAPTER 13 Kaufman Adolescent and Adult Intelligence Test (KAIT) 522
  KAIT Theory 522
    Horn-Cattell Theory in the KAIT 522
    The Theories of Luria and Piaget in the KAIT 523
  Composition of the KAIT 523
  Other Tests and the KAIT 524
    KAIT and the Wechsler Scales 524
    KAIT and WJ-III 525
  Types of Scores on the KAIT 525
  KAIT’s Standardization and Psychometric Properties 525
  KAIT Interpretation 527
    Step 1: Interpret the KAIT Composite IQ 527
    Step 2: Examine the KAIT Crystallized IQ versus the Fluid IQ 528
    Step 3: Is the KAIT Crystallized IQ versus Fluid IQ Difference Abnormal? 529
    Step 4: Determine if the Crystallized and Fluid IQs Are Interpretable 529
    Step 5: Interpret the Meaning of the Crystallized and Fluid Scales 530
    Step 6: Interpret KAIT Strengths and Weaknesses 531
CONTENTS

Step 7: Generate Hypotheses about Fluctuations in the KAIT Profile 533
Alternative KAIT Subtest Groupings 539
KAIT Memory Comparisons 540
KAIT Research on Clinical Profiles 541
Assessment of Learning Disabilities 541
Assessment of Alzheimer’s-Type Dementia 543
Depression and Pseudodementia 545
Personality and Interests as They Pertain to Career Choices 547
KAIT’s Construct Validity for African Americans and Hispanics 549
KAIT Case Study 550
Jeff H., Age 17, Possible Learning Disability 550
Summary 560

CHAPTER 14 Woodcock-Johnson Battery—Third Edition (WJ III) 561

Kevin S. McGrew, Richard Woodcock, and Laurie Ford

History and Evolution of the WJ III 561
Original Woodcock-Johnson (WJ) 561
Woodcock-Johnson—Revised (WJ-R) 562

Theoretical Foundations of the WJ III 563
The Cattell-Horn-Carroll (CHC) Theory of Cognitive Abilities 563
Use of the CHC Theory as the WJ III Design Blueprint 566

Description and Organization of the WJ III Tests and Clusters 570
Organization 570
The Cognitive Battery 571
The Achievement Battery 572

Interpretive Features of the WJ III 577
Types of Scores 578
Types of Profiles 579
Clinical and Selected Special Purpose Clusters 579
The Cognitive and Achievement Performance Models 581

Psychometric Characteristics 582
Norms 582
Reliability 583
Validity 584

Special Applications and Use with Special Populations 600
Assessment of Learning Disabilities 600
General Intellectual Ability/Achievement Discrepancy Model 600
Predicted Achievement–Achievement Discrepancy Model 602
Intra-Ability Discrepancy Model 603
Preliminary Research on Adult LD Identification with the WJ III 604
Neuropsychological Applications 607
CONTENTS

CHC Abilities across the Life Span 613
CHC Cross-Battery Applications 624
Summary 627

CHAPTER 15 Brief Tests of Intelligence and Related Abilities 629

Brief History of Brief Assessment 629
The Terman-Merrill Innovation 629
The Role of the Slosson, Shipley-Hartford, and Other Early Brief Tests 630
Silverstein’s Contributions to Wechsler Short Forms 631
Trends in Short-Form Development for WAIS and Its Successors 632
The Future of Short Forms 633
Let’s Stop Developing and Using Short Forms of Long Tests 633
The Normative Issue, Part I: Thompson’s Key Research 634
The Normative Issue, Part II: The Satz-Mogel Approach 635
The Statistical Issue: Correlated Error Variance 637
Appropriateness of the New Brief Tests for African Americans and Hispanics 638
The Seven-Subtest WAIS-III 640
When to Administer Brief Tests 640
Three Well-Normed Recent Brief Tests of Verbal and Nonverbal Intelligence 641
Wechsler Abbreviated Scale of Intelligence (WASI) 641
Kaufman Brief Intelligence Test (K-BIT) 645
Wide Range Intelligence Test (WRIT) 647
Brief Tests of Either Nonverbal or Verbal Ability 650
Peabody Picture Vocabulary Test—Third Edition (PPVT-III) 650
General Abilities Measure for Adults (GAMA) 652
Matrix Analogies Test (MAT) 654
Brief Tests for Specialized Abilities 655
Kaufman Short Neuropsychological Assessment Procedure (K-SNAP) 655
Kaufman Functional Academic Skills Test (K-FAST) 657
Summary 660

APPENDIX A Alternative Approach to Interpreting the WAIS-III: Applying the Theory-Based Flanagan-Kaufman Interpretive Method for the WISC-IV 663

APPENDIX B WAIS-III Interpretive Worksheet 690
CONTENTS

APPENDIX C  Norm Tables for Computing Standard Scores on the General Ability Index (GAI) and the Clinical Clusters  698

APPENDIX D  Watkins and Canivez's Critique of the Kaufman-Lichtenberger Interpretive System and Articulation of a New Theory-Based Approach to Profile Interpretation  708

References  718

Name Index  776

Subject Index  787
