acquired impairments, 58
activated long-term memory items,
   9–10, 114–115, 136 See also
   recently activated long-term
   memory units.
adaptive training, 182, 187
advance organizers, 212
amygdala, 57–58
analyzing test results, 122–132
anterior cingulate, 54
anxiety, 62
arithmetic facts, 88
arithmetic flash cards exercise,
   190
   example of, 245
articulatory rehearsal, 4
articulation speed, 69
assessment implications, 90–91
assessment report, 225–241
   example of, 236–241
   template, 225–226
assets, 133
   definition of, 129
attention, 31–32, 39
   focusing of, 7
   interventions, 192–193
attention deficit, 84–85
Attention Deficit Hyperactivity
   Disorder (ADHD), 32–34, 84,
   103, 136, 174, 179–181,
   185–186, 192
   hyperactivity level, 34
   subtypes, 33–34
auditory processing, 35
auditory short-term memory span, 4
automaticity, 81, 89–90, 211–212
background information, 102
Baddeley’s model, 3–7, 17–18, 20, 51
basal ganglia, 182
basic reading skills, 69–72
basic writing skills, 81
   automaticity of, 81
behavior observations See observations.
   Behavior Rating Inventory of Executive
   Functions (BRIEF), 122
bilingualism See second language
   learners.
blending, 70, 194, 208
block-tapping tasks, 98
brain changes, 181–183
Brain HQ, 186
brain plasticity, 181
Broca’s area, 53–54
Brodmann’s area 54
case study, 227–251
central executive, 6–7
Child and Adolescent Memory Profile
   (CHAMP), 143
   verbal working memory subtest, 143
visual-spatial short-term memory
   subtest, 143
visual-spatial working memory
   subtest, 143
Children’s Psychological Processes Scale (CPPS), 30, 121
working memory items, 121
chunking, 5, 50, 90
chunking training, 218–219
example of, 243
chunks, 11, 14, 218–219
classification of subtests, 101–102
classroom behaviors, 85, 112–114
classroom learning, 65
clinical working memory composite, 126–127, 130–133, 137
Cogmed, 178–179, 185–186, 250
Cognitive Assessment System, Second Edition (CAS-II), 143–145
composites, 144
phonological short-term memory subtest, 144
verbal working memory subtests, 145
visual-spatial short-term memory subtests, 144–145
assessing, 109–110
content variables, 68, 110, 202–203
instructional variables, 67, 203–204
internal processing variables, 67–68, 204
reduction of, 201–205
teacher behaviors, 109, 203–204
cognitive processes, 74, 80, 133
closely related with working memory, 122–123
correlations with working memory, 25–26
deficits, 90–91
interventions, 192–195
testing of, 122
cognitive scales, 118, 120
compensatory interventions, 169
complex span, 14, 45, 47, 96, 184, 188
component score, 127
comprehensive evaluation, 95
Comprehensive Executive Function Inventory (CEFI), 122
Comprehensive Test of Phonological Processing, Second Edition (CTOPP2), 145–146
phonological memory composite, 145
phonological short-term memory subtests, 146
counter-based exercises, 175
concussions, 59–60
conditional knowledge, 201
confidence intervals, 127, 129
connectivity, 54
increases in, 182
consolidation, 40–41, 56
constructs, 1
controlled attention, 9, 29, 32
corpus callosum, 182
cortisol, 62
counting dots, 244
counting span exercise, 190
cowan’s embedded processes model, 6, 9–10
cumulative rehearsal training, 217–218
Daneman and Carpenter’s model, 7–8
deficits, 133, 137, 197
definition of, 129
depression, 61–62,
developmental impairments, 58
diabetes mellitus, 61
differences between short-term and working memory components, 96–97

Differential Ability Scales, Second Edition (DAS-II), 146–147

executive working memory subtests, 147

phonological short-term memory subtest, 147

visual-spatial short-term memory subtests, 147

working memory composite, 146

digit span, 2, 88, 97
digits backward, 2, 101
digits forward, 14
direct instruction, 210–211
discrepancy, 127
distracting information, 99, 104
dopamine, 61, 182, 183
dorsolateral prefrontal cortex (dPFC), 12, 54–56, 182 See also prefrontal cortex.
dual encoding, 221–222

benefits of, 222
teaching of, 221–222
dyslexia, 86

elaboration, 212–213

example of, 246

embedded processes model, 6
encoding, 21, 38–40, 56, 98, 212
automatic, 39
effortful, 39
interpretation of, 234–235, 239–240

English language learners (ELL) See second language learners.

entorhinal cortex, 57

episodic buffer, 6, 57, 73

Ericsson and Kintsch’s model, 11

executive attention model, 8–9

executive functions, 17, 30–31, 59

interventions, 193–194

rating scales, 122

executive working memory, 20–21, 29, 33, 46, 55–56, 70, 73, 79–80, 86

development of, 48–49

interpretation of, 135–136, 233–234, 239

measures, 99–100

experimental design, 178–179

explicit training, 178, 184

extended testing time, 208

factor analysis, 100

far transfer, 175–176, 179–181, 183–184, 247

fluid reasoning, 28–29, 180

focus of attention, 10

following directions exercise, 191

freedom from distractibility, 2

frontal lobe, 49, 52–54, 56, 59–60

g See general intelligence.
general capacity hypothesis, 12, 16

general intelligence, 26–28, 30

generalization See far transfer.
graphemes, 70

hands-on working memory exercises See working memory exercises.

high-span individuals, 8

hippocampus, 12, 40, 56–57

hyperactivity, 34

imagery See visualization.

implicit training, 178, 184
informal assessment procedures, 102–114
inhibition, 21, 32, 33, 48, 67, 70, 72–73, 79, 189
inhibitory control, 9, 32, 73
instructional practices that support working memory, 209–213
   elaboration, 212–213
   repetition and review, 211
   visually oriented instruction, 209–210
integrated model of working memory, 16–22
integrating assessment data, 226–227
intelligence. See general intelligence.
inference, 134
internet-based working memory training, 184–188
   advantages, 184–185
   disadvantages, 185
   guidelines for, 187–188
interpretation of working memory assessment data, 132–137
   steps, 132–133
interviews, 104–107
   client, 106
   parent, 106
   student, 107
