3 Psycholinguistic Underpinnings: A Cognitive-Interactionist Theory of Instructed Second Language Acquisition (ISLA) 30
  3.1. Theoretical Disunity in Second Language Acquisition (SLA) 30
  3.2. When Knowledge Is Incomplete: The Role of Theory 33
  3.3. A Cognitive-Interactionist Theory of ISLA: Problems and Explanations 36
    P1. Purely incidental and implicit child L1A is overwhelmingly successful 36
    P2. Purely incidental and implicit adult L2A is highly variable and largely unsuccessful 37
    E1. Adult SLA is maturationally constrained 38
    E2. Adults, so defined, are partially “disabled” language learners 41
    P3. Some classes of linguistic features in adult SLA are fragile 43
    E3. Implicit learning is still the default learning mechanism 43
    E4. Explicit learning (including focal attention) is required to improve implicit processing in adult SLA but is constrained 49
    E5. Attention is critical, at two levels 51
    E6. The interaction hypothesis 52
    E7. The role of negative feedback, including recasts 54
    P4. Success and failure in adult SLA vary among and within individuals 57
    E8. Individual differences, especially input sensitivity, and linguistic differences, especially perceptual saliency, are responsible for variability in, and within, ultimate L2 attainment 58
