Index

$H_{\infty}$ performance, 220
Active fault-tolerant control systems, 8
Actuator fault diagnosis design, 322
Adaptive accommodation control, 422
Adaptive backstepping-based active scheme, 191
Adaptive fault accommodation control, 420
Adaptive Fault Estimation, 235
Adaptive intervals, 402
Adaptive nonlinear observer approach, 178
Adaptive threshold design, 76
Adaptive tracking control scheme, 244
Analytical model, 5
Analytical model-based fault detection, 5
Architecture of a fault-tolerant node, 309
Attitude dynamics, 244

Biomedical signal processing, 355
CAN Application Layer (CAL), 307
Centralized integration method, 25
Classification based on control algorithms, 10
Classification based on field of application, 11
Classification of fault detection methods, 3
Classification of reconfigurable control methods, 10
Comparative studies, 211
Comparison of fault detection schemes, 175
Component malfunctions, xv
continuous-time/discrete-time system, 220
Control of integrity, 164
Control of Linear Switched Systems, 294
Controller area network (CAN) protocol, 307
Controller reconfiguration, 143

conventional feedback control design, xv
Critical issue in AFTCS, 9
Decentralized integration method, 25
Design methodology, 316
Design objectives of AFTCS, 10
Detection in frequency domain, 365
Detection of abrupt changes in electrocardiogram, 355
Diagnostic observers, 7
Direct interconnection, 50
Discrete-time fault estimation, 321
Distributed fault diagnosis, 49
Distributed fault estimation, 55
Distributed fault isolation, 55
Distributed fault isolation method, 62
Drift detection, 152, 156
Electrocardiogram (ECG), 355
Electromechanical positioning system, 383
Estimation error dynamic, 240
Existence conditions, 226
Extended Luenberger observer, 177

Failure, 2
Fault, 2
Fault detectability, 67
Fault detection and diagnosis (FDD), 1
Fault detection and isolation, 1, 219
Fault detection filter, 7
Fault detection implementation, 137
Fault detection in nonlinear systems, 176
Fault detection scheme, 248, 417
Fault diagnosis, 2, 90
Fault diagnosis and detection, 17
Fault diagnosis system (FDS), 2
Fault filter, 400
Fault isolation and identification, 401
Fault isolation problem, 52
Fault mismatch function, 69
Fault tolerance, xv, 1
Fault-tolerant control, 135
Fault-tolerant control systems, 135
Fault-tolerant control systems (FTCS), xv
Fault-Tolerant Controller Design, 324
FDI residuals, 164
Feedback control design, xv
Fermentation processes, 387
Flexible-joint robots, 415
Four-tank system, 135, 151
Frequency domain characteristics, 5
Frequency domain ML ratio estimation, 368
Game-theoretic approach, 179
Generalized likelihood ratio (GLR), 355
GLR test algorithm, 358
Hardware redundancy, 3
Helicopter model, 321
High-gain observer approach, 178
Industrial fault-tolerant architecture, 307
Information fusion, 152
Integrated control reconfiguration scheme, 197
Interconnected CSTR units, 149
interconnected, continuous-time stirred tank reactor, 135
Isolation speed, 401
Kalman filter gain, 323
Knowledge-based fault detection, 5
Knowledge-based models, 5
Learning-based active scheme, 190
Limited state measurements, 286
Linear stochastic system, 322
Lipschitz condition, 127
Lipschitz nonlinear function, 239
Lipschitz nonlinear system, 237
Lyapunov function, 140
Lyapunov-reconstruction-based passive scheme, 180
Model prediction-based design approach, 135
Model predictive control, 144
Model-based fault detection, 5
Modeling ECG signal, 356
Modeling uncertainty, 50
Models with additive abrupt changes, 358
Modern technological systems, xv
Multi-sensor data fusion, 24
Multiconstrained design, 220
Multiconstrained fault estimation, 221
Multiplicative fault model, 126
Multiplicative faults, 237
Nominal model, 50
Nonlinear fault-tolerant control, 215
Nonlinear faulty dynamic system, 388
Nonlinear identity observer approach, 177
Nonlinear observer-based residual generation schemes, 176
Objectives and structure of AFTCS, 8
Observer design, 221
Observer-based active structures, 160
Observer-based approach, 6
Observer-based robust fault estimation, 220
Observers, 7
Observers for Lipschitz nonlinear systems, 179
Off-line detection in ECG, 361
Online detection in ECG, 363
Online fault estimation process, 321
Optimization-based active scheme, 187
Overall stability, 165
Parameter estimation, 8, 175
Parameter identification approach, 7
Parameter partition, 402
Parity space approach, 5
Passive fault-tolerant control systems, 8
Pendulum on a cart nonlinear model, 199
Performance evaluation., 209
Plausibility test, 3
Position control algorithm, 386
Predictive control-based active scheme, 195
Process component, 3
Quadruple tank system, 30
Qualitative models, 5
Quantized control design, 271
Quantized fault-tolerant control, 267
Receding horizon control, 144
Reconfigurable control (RC), 1
Index

Reconfigurable fault-tolerant control systems, 1
Regional pole placement, 220
Reliability, xv
Residual characteristics, 389
Residual evaluation, 5
Residual generation, 5
Residual generator and dynamic analysis, 259
Robust adaptive estimation, 239
Robust adaptive fault estimation, 237
Robust unscented Kalman filter, 26
Router fault accommodation in real time, 330
Safety requirements, xv
Safety-critical systems, xv
Signal-based fault detection, 4
Simultaneous fault detection and control, 96
Sliding-mode observer approach, 178
Switched control-based active scheme, 193
System fault injection and monitoring, 315
Test bed, 386
The disturbance decoupling nonlinear observer approach, 178
The parameter filter, 399
Types of fault-tolerant control system, 8
Unbiased minimum variance estimate, 323
Unknown fault function, 52
unknown fault magnitude, 52
Unknown input observer approach, 178
Unscented Kalman filter, 140
Unscented transformation, 21, 79, 141
