pharmacological, 75
treatment
non-pharmacological, 76
pharmacological, 76
dementia, 86
depression
care transitions, 158
case study, 163–5
causes
biological, psychological and social, 154
predisposing factors, 155
depression (cont’d)  
- protective and risk factors, 156
- resilience, 156
- society’s view, 155–6

gerontological and mental health nursing, values of, 162

hopelessness feeling, 157

mental health recovery, definitions of, 161

nursing older people, value base, 162

palliative care, 93–4

prevalence, 153–4

psychosocial interventions, 166

recovery-based approaches
  - hope and meaningful life restoration, 161–2
  - survivors, 160–61

sadness, 156–7

symptoms, 158

treatment
  - antidepressant prescription, 159
  - electroconvulsive therapy (ECT), 159–60
  - evidence, 159

dyspnoea, 92

electroconvulsive therapy (ECT), 159–60

evidence based practice
  - delirium
    - screening, 79
    - studies, 78
    - training for nurses, 78
  - pressure ulcers, 228–9

evidence implementation
  - Caledonian Improvement Model
    - community of practice, 27
    - context and facilitation, 23–4
    - core elements, 26–8
    - impact, 32–3
    - improving condition, 23
    - infrastructure and communication
      - mechanisms, 28
      - knowledge conversion processes, 28–31
      - learning and development processes, 31–2
    - practice improvements, 26
    - practitioner and discipline, 24
    - role of learning, 24
    - sources of evidence, 29
    - sustainability, 24–5

decision-making

care delivery, quality of, 20

case study, 21–2

clinical experience and judgement, 19

information sharing, 22

task, 19

types, 19–20

externally verified data, 33

improvement model, 18

project design, 25–6

role, 18

evidence informed nursing
  - contribution, 237
  - essential connection for practice, 238–40
  - global challenges, 243–4
  - later life conditions, 241–3
  - practice, 240–41
  - principle led nursing, 237–8

evidence informed understanding, truth-telling

burden prevention, 62

clinical manager and registered nurse, 60–62

conditions and changes, 63

design overview, 61

minimised disclosure, 62–3

resident’s relatives, 63–4

exercise recommendation, physical activity

promotion

comorbidities and falls, 124–5

muscular system, 123

tailored exercise program, 123–4

family care

communication, 94

grief and bereavement, 95

information and education, 94

respite care, 95

fatigue, 92

gerontological nursing principles

clinical features
  - frailty, 14
  - geriatric syndromes and clinical
    conditions, 12–14
  - health status, 12
  - ill health characterisation, 14
  - knowledge, 12
