INDEX

A

Absolute zero, 31, 256
Acetic acid, 64, 136
Acids. See also Electrolytes
  anion names compared, 112
  definitions of, 338–341
  molarity of, 317
  naming of, 111–113
  neutralization of, 153, 352–354
  and pH, 349–351
  reactions of, 342–343
Acid ionization constant ($K_a$), 376–378
Acid rain, 356–357
Acid-type dry cell battery, 405
Actinide series, 204
Activation energy, 157, 372
Activity series of metals, 152, 401–403
Actual yield, 180
Addition, significant figures in, 19–21
Agitation, solid dissolving rate and, 312
Air pollution, 267
Air pressure measurement, 250–251
Alkali metals:
  compound formulas formed by, 223
  and halide solubility, 309
  and periodic table, 50, 203
Alkaline earth metals, 50, 203
Alkaline-type dry cell battery, 405
Allotropes, 267
Alpha-particle scattering, 87–88
Aluminum:
  and atomic structure, 201
  chromate, 103
  fluoride formation, 221
  specific heat of, 71
Amatore, Christian, 4
Ameritcum, 48
Amines, pharmaceutical uses of, 341
Ammonia, gaseous, 370
Ammonium phosphate, 103
Amorphous solids, 6
Amphoteric hydroxides, 343
Anhydrous crystals, 295–296
Anions:
  acid names vs., 113
  and compounds, 53
  formation of, 86, 105
  naming of, 84, 102
Anodes, 403
Argon, 48, 201
Arhenius, Svante, 84, 338
Arhenius acids and bases, 338
Art:
  oxygen in restoration of, 52
  synthesized molecules as, 235
Artificial sweeteners, 293
Atmosphere (atm), 250–251
Atmospheric mass, 46
Atmospheric pressure, 250, 285–286
Atoms:
  definition of, 45
  Lewis structures of, 216–217
Atomic clocks, 197
Atomic mass, 92–93
Atomic number ($Z$), 89–91
Atomic properties, periodic trends in, 213–216
Atomic radius, 214, 219–220
Atomic theory and structure, 82–94. See also
  Modern atomic theory
  and atomic mass, 92–93
  Bohr, Niels, 101, 194–195
  and atomic number, 89–91
  and periodic table, 50, 203
  structure of first eighteen elements, 198–201
  subatomic particles in, 85–86
Atomic weight, 92
Automobile storage battery, 405–406
Avogadro, Amadeo, 123
Avogadro’s law, 259–260
Avogadro’s number, 123
Avogadro’s law, 259–260
Avogadro’s number, 123
Buffer solutions, 381–383
Black, Joseph, 71
Bography, 87–88
Bromides, 223
Bromine, 136
Brønsted, J. N., 338
Brønsted–Lowry proton transfer, 338–339
Buffer solutions, 381–383
Calcium chloride, 322
Calculations, significant figures and, 18–21
Catalysts, 372–373
Carbon:
  and atomic structure, 199
  as ring structures, 198–201
  subatomic particles in, 85–87
  and atomic number, 89–91
  and periodic table, 50, 203
Carbonates, acids and, 342
Carbon dioxide, 247
  and mean ionic activity, 338
  and oxygen in blood, 382
Carbon tetrachloride, 228, 236
Carbonic acid, 342
Carbon monoxide poisoning, 151
Carbon tetrachloride, 228, 236
Cathodes, 403
Cathodic rays, 85–86
Cations:
  from binary ionic compounds, 106–108
  and compounds, 53
  formation of, 86, 100
  and ion discovery, 84
  containing two nonmetals, 108
  flow chart for naming, 112
  from, 102
  with metals, 105–108
  naming of, 105–109
  Black, Joseph, 71
  Bohr, Niels, 101, 194–195
  Bohr atom, 193–195
  Boiling point, 286–287
  Boiling point elevation constants, 320–324
  Bonds, see Chemical bonds
  Bond angle, 298
  Bond length, 298
  Boron, 199
  Boron trifluoride, 235
  Boyle’s law, 252–256
  Bromides, 223
  Bromine, 136
  Brønsted, J. N., 338
  Brønsted–Lowry proton transfer, 338–339
  Buffer solutions, 381–383
  von Liebig, Justus, 338
  Arrhenius, Svante, 84, 338
  Arrhenius acids and bases, 338
  Art:
    oxygen in restoration of, 52
    synthesized molecules as, 235
  Artificial sweeteners, 293
  Atmosphere (atm), 250–251
  Atmospheric mass, 46
  Atmospheric pressure, 250, 285–286
  Atoms:
    definition of, 45
    Lewis structures of, 216–217
  Atomic clocks, 197
  Atomic mass, 92–93
  Atomic number ($Z$), 89–91
  Atomic properties, periodic trends in, 213–216
  Atomic radius, 214, 219–220
  Atomic theory and structure, 82–94. See also
    Modern atomic theory
    and atomic mass, 92–93
    Bohr, Niels, 101, 194–195
    and atomic number, 89–91
    and periodic table, 50, 203
    structure of first eighteen elements, 198–201
    subatomic particles in, 85–86
  Atomic weight, 92
  Automobile storage battery, 405–406
  Avogadro, Amadeo, 123
  Avogadro’s law, 259–260
  Avogadro’s number, 123
  Baking soda, 342
  Balanced chemical equations, 145–149, 168
  Barium chloride dihydrate, 295
  Barometers, 250
  Bases. See also Electrolytes
    definitions of, 338–341
    neutralization of, 153, 352–354
    and pH, 349–351
    reactions of, 342, 343
  Bent molecular structure, 237, 238
  Benzenes, 136
  Berkelium, 199
  Binary acids, 111–112
  Binary compounds:
    acids derived from, 111–112

Cavities, 367
Celsius scale, 31
Chadwick, James, 86
Charles, J. A. C., 256
Charles’ law, 256–258
Chemical bonds, 212–240
    in complex Lewis structures, 232–234
    in compounds with polyatomic ions, 234–235
    covalent, 224–229
    and electronegativity, 226–229
    and formulas of ionic compounds, 222–224
    hydrogen, 291–294
    intermolecular, 292
    ionic, 217–222
    and Lewis structures of atoms, 216–217
    and Lewis structures of compounds, 229–232
    and molecular shape, 235–238
    and periodic trends in atomic properties, 213–216
Chemical calculations, 167–182
    limiting reactant calculations, 176–181
    mass–mass calculations, 174–176
    mole–mass calculations, 173–174
    mole–mole calculations, 170–173
    stoichiometry, 168–170
    yield calculations, 180–181
Chemical changes:
    energy in, 69
    and properties of substances, 65–68
Chemical equations, 143–162
    calculations from, 168–181
    combination reactions, 150–151
    decomposition reactions, 151–152
    double-displacement reactions, 153–155
    general format, 144–145
    and global warming, 159–161
    and heat in chemical reactions, 156–158
    information in, 149–150
    molecular representations of, 68
    single-displacement reactions, 152–153
    and stepwise sequences, 146–148
    and stoichiometry, 168–170
    symbols commonly used in, 144
    types of, 150–156
    writing and balancing, 145–150
Chemical equilibrium, 363–384
    and buffer solutions, 381–383
    and catalysts, 372–373
    and concentration, 368–370
    definition of, 365–366
    equilibrium constants, 373–374
    ionization constants, 376–378
    ion product constant for water, 374–376
    Le Châtelier’s principle, 366–373
    and pH control, 381–383
    rates of reaction, 364
    for reversible reactions, 365–366
    solubility product constant, 378–381
    and temperature, 371–372
    and volume, 370–371
Chemical formulas:
    of compounds, 54–55
    of ionic compounds, 103–104, 222–224
    percent concentration from, 130–131
Chemical kinetics, 364
Chemical properties, 63–65
Chemists, 2–3
Chemistry (term), 2
Chlorides, 223
Chlorine:
    and atomic structure, 201
    and electron arrangements, 218
    empirical and molecular formulas, 136
    gas, 225
    name of, 48
    oxy-acids of, 113
    p electron pairing in, 225
    physical properties of, 64
    relative radii of, 219
    sodium atoms reacting with, 217–218
Coal, 72–73
Cobalt, 48
Coins, modern technology and, 132
Combined gas laws, 260–262
Combination reactions, 150–151
Colligative properties, of solutions, 320–324, 348
Combination reactions, 150–151
Combined gas laws, 260–262
Combustion:
    gasoline, 69
    hydrogen, 299
    magnesium, 157
Common ion effect, 380
Compounds. See also Quantitative composition of compounds
    and anions, 53–54
    and cations, 53
    chemical formulas of, 54–55
    composition of, 55–57
    empirical formulas of, 133–137
    and ions, 53–54
    Lewis structures of, 222–223
    molar mass of, 126–129
    molecular and ionic, 52–54
    molecular formulas of, 135–137
    and molecules, 53–54
    percent composition of, 129–132, 135
    with polyatomic ions, 234
    registered, 53
Concentrated solutions, 313
Concentration, 307, 312–320
    dilute vs. concentrated solutions, 313

representative elements, 50, 203, 204
transition elements on, 50, 203, 204
trends in atomic properties, 213–216
Petroleum, 72–73
pH: changes caused by HCl and NaOH, 382
common applications of, 351
of common solutions, 350
control of, 381–383
importance of, 351
as logarithmic scale, 350
scale of acidity and basicity, 349–350
test paper, 351
Phases, matter and, 7
Phosphate system, as buffer in red blood cells,
383
Phosphorous, 201
Phosphorus pentachloride, 109
Photorhodopsin, 109
Photon, 193
Physical changes, 65
Physical properties, 63–65
Physical states of matter, 6–7
Photons, 193
Photons, 193
Photons, 193
Planck, Max, 194
Polyatomic ions, 109–110, 234, 392
Polyatomic compounds, 113
Potassium, 92
Potassium chloride, 103
Potassium hydroxide, metals and, 341
Potassium nitrate, 103
Pressure: ppm (parts per million), 313
Pressure: of gases, 249–252
and molecule number/temperature of gases,
249–252
and solubility, 310
and volume of gases, 252–256
Principle energy levels, 195–197
Problem solving, 68
Products, 67, 144, 145
Properties (term), 63. See also specific types
Protons, 86
Pure substances, distinguishing mixtures from,
8–9
Quadratic equation, 377–378
Quanta, 194
Quantitative composition of compounds:
calculating empirical formulas, 133–135
calculating molecular formula from empirical
formula, 136–137
empirical formula vs. molecular formula, 133,
135–136
molar mass of compounds, 126–129
and the mole, 122–124
percent composition of compounds, 129–132
Quantum mechanics, 195
Radiation: electromagnetic, 192–193
Solids (cont.)
dissolving rate of, 311–312
physical properties of, 7
Solubility, 307–311
of alkali metal halides, 309
and pressure, 310
and saturated solutions, 310
and supersaturated solutions, 310
and temperature, 309
and unsaturated solutions, 310
Solubility product constant ($K_{sp}$), 378–381
Solutes, 306, 308–309
Solutions, 305–328. See also Solubility
colligative properties of, 320–324
common types of, 306
general properties of, 306–307
osmosis and osmotic pressure in, 325–326
saturated, 310–311
solution maps, 25
supersaturated, 311
unsaturated, 310
Solution maps, for unit conversions, 23–24
Solvents, 306, 308–309
Space shuttle, 69
Specific gravity, 36
Specific heat, 71
Spectator ions, 352
Speed, of waves, 192
Spin, 195–196
Standard conditions, 260
Standard temperature and pressure (STP), 260
Stirring, solid dissolving rate and, 312
Stock System, 106
Stoichiometry, 168–170. See also Gas stoichiometry
Stoney, G. J., 84–85
STP (standard temperature and pressure), 260
Stratosphere, 267
Strong electrolytes, 346–348
Subatomic particles, 85–87
electrons, 86
general arrangement of, 88–89
neutrons, 86–87
protons, 86
subatomic particles, 87–88
Sublevels, energy, 195–198
Sublimation, 284
Subscripts, chemical formulas and, 54–55
Substances:
definition of, 7–8
properties of, 63–64
Subtraction, significant figures in, 19–21
Sugar, 64
Sulfates, 223
Sulfur, 9, 201
Sunglasses, 400
Super-ion battery, 407
Supersaturated solutions, 311
Surface area, dissolving rate and, 311, 312
Surface tension, of liquids, 283–284
Surgical implants, oxygen in cleaning of, 52
Suslick, Kenneth, 252
Symbols (of elements):
common, 47–49
from early names, 48
Uranium, 48
Volume:
of equal masses, 35
and equilibrium, 370–371
and gas pressure, 252–256
in gas stoichiometry, 270–274
gas temperature, 256–258
and inverse $PV$ relationship, 253
measurement of, 26
molar, 262–263
volume percent, 315
Volumetric flasks, 316
VSEPR (valence shell electron pair repulsion) model, 235–238
Wastewater, reclamation of, 299
Water, 297–299
composition of, 55–56
as compound, 53
dipole–dipole interactions in, 291
electrolysis of, 66–68
geometric shape of, 235
$H^+$ and $OH^-$ concentration relationship in, 375
hydrogen bonding in, 291–292
ice and water in equilibrium, 297
ionization of, 348–349
ion product constant for, 374–376
meniscus of, 284
molecular structure of, 298–299
physical properties of, 287, 291, 297
sources of, 299
vapor pressure curves for, 321
vapor pressure-temperature curves for, 286–287
Water of crystallization, 295
Water of hydration, 295
Wavelength, 192, 193
Wave mechanics, 195
Weak electrolytes, 346–348
Weight, determination of, 24
Westphal, James A., 33
Woody plants, energy and, 72
Yield calculations, 180–181
Z
Z (atomic number), 89–91
Zeolite, 160
Zinc, hydrochloric acid and, 152
Zinc-copper voltaic cell, 404–407
Zinc-mercury cells, 405
Zinc sulfate, 103
