*Surface Analysis – The Principal Techniques* 2nd Edition  Edited by John Vickerman and Ian Gilmore
© 2009 John Wiley & Sons, Ltd
Auger Electron Spectroscopy (AES)  
(continued)  
λ-correction, 41–2  
preferential sputtering, 40–1  
sputter rates, 37–40  
thin film calibration standard,  
34–6  
instrumentation, 21–2  
calibration, 30–1  
detection limits, 29–30  
electron beams/sources, 22–3  
modes of acquisition/operation, 24–9  
spectrometers, 21–3, 24  
quantitative analysis, 31–3  
Auger lines in ESCA spectra, 75–6  
backscattering, electron, 10, 17–18, 411  
see also Rutherford Backscattering,  
backup pumps, 636  
bacteria, 162–6, 193, 601–2  
ball cratering, 26–7, 28  
basis, crystal, 393  
Beer’s Law, 65  
beryllium metal surface, 413–14  
b bevelling, 246–9  
binding energies, 12, 13, 51–2  
and chemical shift, 52–3  
organic samples, 56  
referencing in ESCA, 58–9  
and Scofield cross-section, 69  
biological systems and studies  
AFM, 532–7  
SNOM, 540  
static SIMS, 162–8, 177–83, 213  
DESI applications, 196–8  
post-ionization techniques, 190–3  
STM, 508–11  
bismuth deposition, 423–4  
bisphenol-A, 161–2  
Bohr’s critical angle, 271, 272  
boron, 225, 229  
Bragg’s Law, 394  
Bragg’s rule, 286  
buncher–ToF, 139, 172  
C$_{60}$ sputtering, 94, 99, 118, 119, 152, 153  
biological systems, 162–6, 169, 171, 172, 176–83, 214  
semiconductor depth profiling, 217  
calcite, 459–62  
calibration standards  
AES, 30–1  
ESCA, 58–9, 70–1  
cantilevers (AFM), 511–12, 516–19  
capping layers, 231  
carbon monoxide adsorption  
atomic manipulation, 545  
on copper, 350–2, 355  
on nickel, 308–10, 445–7, 470–2  
on platinum, 356, 453–6  
carbon nanotubes, 500–1, 517  
catalysts, 290–3, 310–12  
avtomotive exhaust, 156–8  
hydrosulfurization, 382–3  
centring, mean, 576  
caesium gun, 157  
CFM, 524–6  
channelling, 293–7  
character tables, 369, 370, 371, 372, 374  
charge compensation, 60–1, 88, 124–5  
cheek cells, 173, 179–80  
chemical derivatization, 96–9  
Chemical Force Microscopy (CFM), 524–6  
chemical shift  
in AES, 19–21, 42–3  
and binding energy in ESCA, 52–63  
cholesterol, 102, 172, 182  
classification, multivariate, 599–606  
cluster ions, 115–16, 118–19, 214  
and depth profiling, 124  
field ionization sources, 131
imaging/analysis, 138–9
automotive catalyst, 156–7
biological samples, 162–6, 169–72, 176–83
molecular dynamics studies, 148–9
collision kinematics, 172–5
Compton scattering, 50–1
core level energy, 16
cryopumps, 633–4
crystal structure, 393
surface, 293–7, 316–23, 489–90
crystal truncation rods, 451
cyclohexane adsorption, 352–3
cylindrical mirror analyzer, 21, 24, 306
cytosine, 153–4
damage cross-section, 117, 118
DART, 198
data analysis see multivariate data analysis
deconvolution, 238–9
delta layers, 236–9
depth analysis/profiling
AES, 25–8, 33–43
dynamic SIMS, 212–13, 217–24
near surface regions, 230–3
quantification, 233–42
sources of errors, 242–6
ESCA, 89–94
multivariate curve resolution, 581–2, 583
RBS, 298
quantitative layer, 290–3
surface structure, 293–7
static SIMS, 172–5
Desorption Electrospray Ionization Mass Spectrometry (DESI), 194–9
desorption ionization model, 150–2
deuterium adsorption, 294–7
dialkyl disulfides, 504–5
dielectrics, 499–500
diffraction, theory of
three-dimensional crystals, 392–8
two-dimensional surfaces, 398–402
diffuse reflectance, 345–8
diffusion pump, 628–30
dimensionality of data, 567–8
dimyristoyl phosphatidic acid, 176
dip-pen nanolithography, 457–8
dipalmitoylphosphatidylincholine, 192
dipole interactions, 362–7
dipole scattering, 365–7
direct analysis in real time, 195, 198
Direct Recoil Spectroscopy (DRS), 320–3
disappearance cross-section, 117–18
discriminant function analysis, 600–2
DNA, 508–10, 537, 550
dopants and impurities, 226–30
uniformly doped reference materials, 235–6
DPPC, 192
DRS, 320–3
dual beam methods, 254–6
duoplasmatron, 128
dynamic range
dynamic SIMS, 209–11, 222–4
static SIMS, 173
dynamic SIMS, 207–68
background/overview, 207–14
applications, 207–8, 213, 233
dynamic vs static SIMS, 114, 209
modes of operation, 211–13
sensitivity and dynamic range, 209–11
complementary/multi-technique approaches, 224–5
depth profiling, 217
calibration of depth scale, 241–2
depth resolution, 217–22
dynamic range and memory effects, 222–4
sources of error, 242–6
dynamic SIMS (continued)
dopant and impurity profiling, 226–7
high concentration and matrix effect, 227–30
instrumentation, 209, 252–3
scanning microprobe, 126
secondary ion optics, 253
near surface profiling, 230–3
novel techniques, 246
bevelling and imaging/line scanning, 246–51
two-dimensional analysis, 251
primary ion beams/sputtering, 208–9, 214–17
quantification of data, 233–4
delta layers/response functions/deconvolution, 236–9
ion implant reference/fabrication, 234–5, 239–40
thin film reference, 240–1
uniformly doped reference, 235–6
specimen selection/preparation, 244–5

EELS see Electron Energy Loss Spectroscopy
