pharmacological strategies flow chart, 74f
phenergan see promethazine
photostimulable phosphor plate (PSP), 222, 223f
physical examination, 186, 198
physical risk, 133, 133t
Piaget, Jean, child development theory of
concrete operations stage in, 14–15
current application of, 15, 15f
formal operations stage in, 15
overview of, 13–14
preoperational stage in, 14
sensorimotor stage in, 14
play area, 228–30, 228f, 229f, 230f
positive reinforcement, 77–8
postoperative soft tissue injury, 121, 121f
potentially cooperative behavior, 26–30
preoperative development stage, 14
preventive medication, 125
hydroxyzine and, 126
problem ownership, 73
promethazine
characteristics, 168t
chloral hydrate used with, 162–3
drawbacks of, 167
as management medication, 126
protective stabilization, 85, 86f
PSP see photostimulable phosphor plate
pulse oximetry, 137–8, 137f
radiographs
anterior occlusal, 222, 223f
of extra oral bitewings, 225
gaining cooperation for, 222–5, 224f, 225f
overview, 222
panoramic, 225
rapid induction technique, 153–4, 153t
recall history review, 65–6, 66t
reception area, 228–30, 228f, 229f, 230f
reflective listening, 73
rescue, 160
resistant attachment, 18
restraint, 84–5, 85f, 86f
retraining, 88–9
secure attachment, 18
sedation see also anesthesiologist, dentist; general anesthesia;
local anesthesia; specific agent
categorization of, 125
child and, 131–5
children with disabilities and, 97
conclusions about, 142
deep, 127, 159, 181–2
drugs and, 160
emergency management, 141–2
of airway, 202–3, 203f
allergy, 206–7, 207f
altered consciousness, 204–5
anesthesiologist and, 184
ASA score and, 199
asthma, 204
basic algorithm, 200
BMI and, 198
breathing and circulation, 203–4, 203f
conclusions about, 207
definitive care, 204
drugs pharmacology and dosage, 200
emergency kit, 199–200
foreign body aspiration, 207
sedation (cont’d)
  head-tilt chin-lift maneuver, 202, 202f
  local anesthesia overdose, 121–3, 122t, 206
  Mallampati airway classification and, 198–9, 198f
  medical history and, 197–9
  overview, 197
  physical examination and, 198
  position patient appropriately, 201f, 202, 202f
  problem recognition, 201–2
  seizures, 205
  factors and considerations, 131, 132t
  guidelines, 141
    adherence to, 127–8
    established, 127
  hearing impairments and, 100
  hydroxyzine and, 126
  levels of, 159
  magic bullet and, 131
  management medication, 125
  chloral hydrate as, 126
  meperidine as, 126
  promethazine as, 126
  minimal and moderate, 159
  monitors and monitoring
    auscultation, 136, 136f
    BPCs, 136–7
    capnography, 138–9, 139f
    on day of procedure, 139–40
    intra-operative child behavior and, 140t
    pulse oximetry, 137–8, 137f
  overview, 4, 131
  parenting style and, 133
  patient assessment and, 133–5
    physical risk and, 133, 133t
    tonsils, 134, 134f
  physical impairments and, 97
  practitioner and staff training in, 140–141
  preventive medication, 125
  protocol, 135, 135t
  rescue and, 160
  societal norms and, 128
  temperament domains and, 132t
  titrating gases for, 152–3
  sedation agents see also nitrous oxide
  antihistamines
    diphenhydramine, 167–8, 200
    hydroxyzine, 166–7, 167f
    promethazine, 167, 168t
  benzodiazepines
    diazepam, 165–6, 167t, 175
    ketamine, 165–6
    midazolam, 164–5, 166t, 174–5
    other, 165–6, 167t
    triazolam, 166
    zolpidem, 166
  conclusions about, 168–9
  hypnotics
    chloral hydrate, 160–163, 161f, 163t, 172–3
    meperidine, 126, 163–4, 164t, 174
  surveys identifying, 172
  seizures, 205
  sensorimotor stage, 14

sensory impairments
  clinical considerations, 100–101
  hearing, 99–100
    visual, 100–101
  sibling influences, 42
  single tooth anesthesia (STA), 120
  societal norms, 5–6, 128
  soft tissue injury, postoperative, 121, 121f
  special child, 94–5
  STA see single tooth anesthesia
  stethoscopes, 136, 136f
  strange situation, 18
  supraperiosteal injection, 119–20
  syringe assembly, 108–10, 109f

team, dental see dental team
tell-show-do (TSD)
  behavior shaping compared with, 77
  N₂O administration and, 151–2, 151f, 152f
  as non-pharmacologic approach, 75–6, 76f, 77
  temperament domains, 132t
  tense-cooperative behavior, 29
  teratogens, 12–13
  themes, 230, 230f
  timid behavior, 29
  titrating gases for sedation, 152–3
  titration technique, 153
  tonsils, 134, 134f
  tooth brushing, 16
  topical anesthesia, 111–12
  toxicity, 121–3, 122t
  transmitter, 71
  treating object as different object, 81–3
  treatment areas, 232, 234–8, 234f, 235f, 236f, 237f, 238f
  triangle, pediatric dentistry
    changes in, 5, 5f
    dental home and, 54–5
    informed consent and, 5
    societal norms and, 5–6
    triazolam, 166
  triple combination, 163
  TSD see tell-show-do

uncontrolled behavior, 28
United Nations, 93
utilization rates, 7

VAS see visual analogue scales
vasovagal syncope, 205
verbal social reinforcers, 77
video screen placement, 237, 237f
visual analogue scales (VAS), 24, 24f
visual imagery, 80–81
visual impairment, 100–101
voice control, 72–3, 79

waiting area, 228–30, 228f, 229f, 230f
word substitution, 70–71

zolpidem, 166
Z-shaped hallways, 230, 231f
