Section 1 Epidemiology and classification of childhood epilepsies 1
Section editor: Phillip L. Pearl

1 Epidemiology and common comorbidities of epilepsy in childhood 3
   Jay Salpekar, Matthew Byrne, and Georgann Ferrone
   1.1 Epidemiology 3
   1.2 Incidence and prevalence 4
   1.3 Gender and age 4
   1.4 Classification 5
   1.5 Febrile seizures 6
   1.6 Etiology 6
   1.7 Psychiatric comorbidity 7
   1.8 Psychological and psychosocial stress related to chronic disease 7
   1.9 Psychiatric symptoms related to medication side effects 8
   1.10 Psychiatric comorbidity related to epilepsy pathophysiology 8
   1.11 Attention-deficit/hyperactivity disorder (ADHD) 9
   1.12 Anxiety 10
   1.13 Depression 11
   1.14 Intellectual and developmental disabilities (IDD) 12
   1.15 Conclusion 12
   References 13
CONTENTS

2 Classification and definition of seizures and epilepsy syndromes in childhood 17
Susan E. Combs and Phillip L. Pearl

2.1 Introduction 17
2.2 Purpose and goals of definitions and classification 17
2.3 Systems of classification and definitions 18
2.4 Seizures 18
2.5 Generalized seizures 19
2.6 Focal seizures 22
2.7 Syndromes 23
2.8 Specific age-related epilepsy syndromes 25
2.9 Future directions 34
Acknowledgements 34
References 34

3 Initiating and withdrawing medical management 37
David T. Hsieh and Bhagwan Indur Moorjani

3.1 Initiating medical management 37
3.2 The chances of seizure recurrence after the first unprovoked seizure 39
3.3 Seizure recurrence 42
3.4 The possible adverse effects of seizure recurrence 42
3.5 The risks of initiating antiepileptic drug therapy 44
3.6 The benefits of initiating antiepileptic drug therapy 45
3.7 How to initiate treatment with antiepileptic drugs 45
3.8 Special circumstances 48
3.9 Summary: initiating medical management 48
3.10 Withdrawing medical management 49
3.11 The long-term prognosis of childhood-onset epilepsy 50
3.12 When to consider discontinuing antiepileptic drug therapy 51
3.13 Risk factors for seizure recurrence after discontinuation 51
3.14 The risks of discontinuing antiepileptic drug therapy 54
3.15 The benefits of discontinuing antiepileptic drug therapy 55
3.16 How to discontinue antiepileptic drugs 55
3.17 Special circumstances 55
3.18 Summary: withdrawing medical management 56
3.19 Disclaimer 57
References 57

4 Common genetic and neurocutaneous disorders in childhood epilepsy 59
Dewi Frances T. Depositario-Cabacar, William McClintock, and Tom Reehal

4.1 Idiopathic epilepsies 60
4.2 Symptomatic epilepsies 63
4.3 Epilepsy in common chromosomal abnormalities 63
CONTENTS

4.4 Epilepsy in metabolic and mitochondrial disorders 65
4.5 Epilepsy in malformations of cortical development 66
4.6 Neurocutaneous disorders 67
4.7 Summary 70
References 70

Section 2 Diagnostic evaluation of childhood epilepsies 73
Section editor: David F. Clarke

5 Evaluating the child with seizures 75
Kristen Park and Susan Koh

5.1 Emergent diagnosis and management 76
5.2 Subsequent evaluation 79
5.3 Additional neurodiagnostic evaluation 84
References 87

6 The use of EEG in the diagnosis of childhood epilepsy 90
David F. Clarke

6.1 Technical aspects of the EEG 91
6.2 Methods used to increase EEG yield 91
6.3 When should an EEG be ordered? 92
6.4 EEG findings in epilepsy and epilepsy syndromes 93
6.5 Neonatal EEGs 94
6.6 The EEG in focal epilepsy 96
6.7 The EEG of generalized epilepsy 99
6.8 Specific disease-related epilepsy syndromes 104
6.9 Conclusion 105
References 105

7 Imaging of pediatric epilepsy 107
Asim F. Choudhri

7.1 Introduction 107
7.2 Imaging considerations 107
7.3 Congenital malformations 117
7.4 Neoplasms 124
7.5 Acquired/idiopathic abnormalities 126
References 127

8 Non-epileptic paroxysmal events of childhood 129
Sucheta M. Joshi

8.1 Introduction 129
8.2 Breath-holding spells 130
8.3 Parasomnias 131
CONTENTS

8.4 Benign paroxysmal positional vertigo of childhood 133
8.5 Syncope 134
8.6 Paroxymal non-epileptic events (PNEs) with a psychiatric or behavioral basis 134
8.7 Hyperekplexia 136
8.8 Alternating hemiplegia of childhood 136
8.9 Movement disorders 137
8.10 Sandifer syndrome 138
8.11 Conclusion 138
References 139

Section 3 Principles of treatment 143
Section editor: James W. Wheless

9 Pharmacology of antiepileptic drugs 145
James W. Wheless

9.1 Pharmacokinetics 146
9.2 Pharmacogenomics 155
References 157

10 Therapeutic efficacy of antiepileptic drugs 159
James W. Wheless

10.1 Efficacy-based treatment guidelines 160
10.2 Antiepileptic drug selection based on specific pediatric epilepsy syndromes 164
10.3 Influence of comorbidities in children with epilepsy 171
10.4 Conclusions 172
References 172

11 Adverse effects of antiepileptic drugs 175
James W. Wheless

11.1 Introduction 175
11.2 Specific drugs 179
11.3 At-risk profiles and monitoring 189
References 191

12 Vagus nerve stimulation therapy and epilepsy surgery 193
Kate Van Poppel and James W. Wheless

12.1 Vagus nerve stimulation 195
12.2 Epilepsy surgery 203
12.3 Conclusions 215
References 215
## CONTENTS

**13 Dietary therapies to treat epilepsy**

*James W. Wheless*

- 13.1 History 220
- 13.2 Efficacy 221
- 13.3 Mechanism of action 228
- 13.4 Selection of candidates for the diet 232
- 13.5 Initiation and maintenance 234
- 13.6 Complications 236
- 13.7 The ketogenic diet in the twenty-first century 239

*References* 239

*Resources* 240

*Websites* 241

**Section 4 Generalized seizures and generalized epilepsy syndromes**

*Section editor: Amy L. McGregor*

**14 Idiopathic generalized epilepsies**

*Amy L. McGregor*

- 14.1 Clinical features 246
- 14.2 Natural history 248
- 14.3 Genetics 248
- 14.4 Treatment 248
- 14.5 Classification 249
- 14.6 Myoclonic epilepsy in infancy 249
- 14.7 Childhood absence epilepsy (CAE) 250
- 14.8 Juvenile absence epilepsy (JAE) 252
- 14.9 Juvenile myoclonic epilepsy (JME) 254
- 14.10 Epilepsy with generalized tonic-clonic seizures alone (IGE-GTCs) 256
- 14.11 Epilepsy with myoclonic absence 257
- 14.12 Epilepsy with myoclonic-ataxic seizures/Doose syndrome 258
- 14.13 Febrile seizures plus (FS+ ) 259
- 14.14 Eyelid myoclonia with absences (EMA)/Jeavons syndrome 260
- 14.15 Summary 262

*References* 264

**15 Cryptogenic and symptomatic generalized epilepsies: epilepsies with encephalopathy**

*Karen Keough*

- 15.1 Neonatal-onset epilepsies with encephalopathy 268
- 15.2 Infantile-onset epilepsies with encephalopathy 270
- 15.3 Epilepsies with encephalopathy with onset later in infancy 275
- 15.4 Epilepsies with encephalopathy with onset after infancy 277
CONTENTS

15.5 Continuous spike wave of sleep (CSWS) and Landau–Kleffner syndrome (LKS) 279
References 280

Section 5 Partial-onset seizures and localization-related epilepsy syndromes 283
Section editor: James W. Wheless

16 Idiopathic partial epilepsies 285
Freedom F. Perkins Jr

16.1 Benign infantile seizures 286
16.2 Benign childhood epilepsy with centrotemporal spikes 287
16.3 Childhood occipital epilepsy (Panayiotopoulos type) 289
16.4 Late-onset childhood occipital epilepsy (Gastaut type) 292
References 294

17 Cryptogenic and symptomatic partial epilepsies 296
Stephen Fulton

17.1 Etiology 296
17.2 Seizure phenomena 297
17.3 Temporal lobe epilepsy 297
17.4 Extratemporal epilepsy 303
17.5 Occipital lobe epilepsy 306
17.6 Parietal lobe epilepsy 307
17.7 Hypothalamic hamartoma 307
17.8 Other localizing and lateralizing signs 308
References 309

Section 6 Epilepsies relative to age, etiology, or duration 311
Section editor: Yu-Tze Ng

18 Neonatal seizures 313
Eric V. Hastriter

18.1 Significance of neonatal seizures 313
18.2 Pathophysiology of neonatal seizures 314
18.3 Classification and clinical features of neonatal seizures 316
18.4 Electrographic seizures 317
18.5 Monitoring and recording 317
18.6 Etiology of neonatal seizures 321
18.7 Metabolic causes for neonatal seizures 323
18.8 Inborn errors of metabolism 323
