Contents

Series Editors’ Preface xiii
Preface xvii

Part I Course Preparation 1

1 Teaching Statistics: A Beginning 3
   So Why Teach Statistics? 5
   Historical Pedagogical Controversies 7
      Who should teach statistics? 7
      Statistics labs and related technology 8
      Content of statistics courses 10
   Statistics in Relation to the Discipline 11
   Sequence of the Class and Topics 12
   Introducing Research Methods within
      the Context of Statistics 16
   Student Populations 17
      Mathematical ability 17
      Cognitive ability and learning styles 19
      Self-efficacy and motivation 20
      Gender 22
   Helping Your Students Survive Statistics 23
   Conclusion 25
2  Nuts and Bolts of Teaching Statistics  27
   Syllabus Construction  28
   Textbook Selection  30
      Conceptual orientation  31
      Level of difficulty  33
      Chapter topics and organization  34
      Core formulas and vocabulary  35
      Type of data sets/quality of the exercises  36
   Traditional Versus Electronic Textbooks  37
   Supplemental Materials  38
      Study guides  39
      Companion Web sites  39
      Computer tutorials  40
   Electronic Discussion Boards  42
   Multimedia Tools  44
      Presentation technology  45
      Interactive applications: Java applets, Flash, Shockwave, and HTML  46
      Multimedia simulation programs  48
   Conclusion  49

Part II  Theoretical and Pedagogical Concerns  51

3  Educational Reform in Statistics  53
   Educational Reform  54
   Statistically Educated Students  56
   Statistical Literacy  59
      Knowledge elements  60
      Dispositional elements  62
   Statistical Thinking  63
   Statistical Reasoning  66
   Misconceptions Impacting the Development of Literacy, Thinking, and Reasoning  70
   Final Thoughts on Statistical Literacy, Thinking, and Reasoning  72
   Assessment  73
      What is the role of assessment?  73
      What is the role of authentic assessment?  74
      Assessment and learning outcomes or goals  75
   Conclusion  77
4 In the Classroom 79
Conceptual Learning, Active Learning, and Real Data 80
Conceptual learning versus rote memorization 80
Active learning 82
Real data 83
Instructional Techniques 84
Lecture 85
The use of questions 86
Practice problems and examples 87
Journal assignments 88
Activities and demonstrations 89
Writing assignments 90
Concept maps 93
Cooperative learning 94
Projects 95
Assessment 97
Principles of effective assessment 97
Mastery learning 98
Confronting Fear and Anxiety 99
Conclusion 101

Part III Teaching Specific Statistical Concepts 103

5 Descriptive Statistics and Bivariate Distributions 105
Graphing Data 106
The use of graphs in science 107
Elements of good design 108
Human graphical perception 109
Available graphing methods 110
Software design 111
Normal Distribution 112
Measures of Central Tendency 114
Measures of Variability 117
Correlation 119
Simple Linear Regression 122
Computer Applications 125
Conclusion 127

6 Teaching Hypothesis Testing 129
Samples, Sampling Distributions, and the Central Limit Theorem 131
### Part IV  Advanced Topics and Approaches

7  **Data Analysis in Statistical Education**  
Teaching with Statistical Software Tools  
Data Analysis Packages  
   * SPSS  
   * Microsoft Excel  
   * Other commercial data analysis programs  
   * Comparing data analysis programs  
Data Analysis Software Textbooks  
Using Data Sets in the Classroom  
   * Artificial data sets for the classroom  
   * Reality-based data sets  
   * Finding appropriate reality-based data sets  
   * Drawbacks to using real data sets  
Conclusion  

8  **Endings and Beginnings**  
Multivariate Statistics  
   * Multiple regression  
   * Logistic regression  
   * Additional multivariate techniques
