Index

A
AAC, see augmentative and alternative communication
accessibility, 271
activity
  alpha, 136
gamma, 74
  high frequency, 74
adaptation, 246
aliasing, 154
ALS, see amyotrophic lateral sclerosis
amplifier, 147
differential, 148
amyotrophic lateral sclerosis, 4, 43, 105
analog filter, 152
analog-to-digital conversion, 152
analysis
time-frequency, 136
artifact
electrode movement, 167
muscle, 167
ocular, 175
sweat, 167
augmentative and alternative communication (AAC), 44
autonomy, 297

B
bandwidth, 147
BCI
active, 53
adaptive, 246
affective, 318
asynchronous, 53
passive, 318
BCI software, 181
Fieldtrip, 194
OpenBCI, 316
OpenViBE, 181, 190, 199, 211, 227, 249, 253
BCI2000, 192
BCIlab, 194
beta rebound, 203, 252
biosig, 194
bipolar montage, 146
brainTV, 75

C, D
carers, 113
classification, 186, 211, 314
coma, 4
common mode rejection ratio, 148
consciousness, 4
consent, 268, 269
cross validation, 222
data protection, 164
deontology, 268
diffusion MRI, 9
disorders of consciousness, 3
“driven-right-leg” (DRL) circuit, 151

E

ECoG, 114, 123, 128
EEG, 123
  acquisition, 170, 185
  artifacts, 86, 166
  contact gel, 126
  electrode, 125
  experimentation, 170
  headset, 114, 127
  intracerebral, 73
  recording site, 166
  electrocorticography (ECoG), 123, 128
  electrodes, 316
    dry electrodes, 316
  epilepsy, 72, 73, 81, 129
  equipment certification, 164
  ethics, 261, 289, 316
  committee, 164
  events marking
    equipment (hardware), 156
    software, 158
  evoked potentials, 228
  exoskeleton, 35
  experimentation
  animal, 264

F, G, H

feedback, 186
freedom, 278
frequency
  sampling, 153
fMRI, 71
functional electrical stimulation, 35
  MRI, 9
  gain, 147
  gamma activity
    rhythm, 65
GBS, see Guillain-Barré Syndrome
Guillain-Barré syndrome, 106
homoskedasticity, 230
human learning, 314
Human–Computer Interaction, 87
hype cycle, 312

I, J, K
impedance, 126, 174
implantation, 289
information transfer rate, 48
jitter, 155
Kappa coefficient, 221

L, M
LDA, see linear discriminant analysis
learning
  human, 184
linear discriminant analysis, 212, 230
LIS, see locked-in syndrome, 43, 106
lobe
  temporal, 66
locked-in syndrome, 4, 43, 106
magnetoencephalography, 123, 137
marker, 156
matrix
  confusion, 216
MCS, see minimally conscious state
MEG, see magnetoencephalography
minimally conscious state, 4
monopolar montage, 145, 252
motor deficiencies, 30
  imagery, 17
motor imagination, 88
motor imagery, 252
MS, see multiple sclerosis
multiple sclerosis, 105
myopathies, 106

N, O
neuroadaptative technology, 318
neuroergonomy, 318
neurofeedback, 37, 76, 95
neuroprosthesis, 33
neurorehabilitation, 36
neuroscience, 76
Nyquist-Shannon
  theorem, 154
organic transistor, 136
oscillations
  alpha, 175, 201
  gamma, 74
overtraining, 232

P, R
P300, 227, 241
patients, 103, 314, 316
performance, 47
  classification, 216
  enhancement, 276
persons protection committee, 164, 265
PPC, see persons protection committee, 164, 265
reference electrode, 145
rehabilitation, 270, 318
reliability, 272
responsibility, 273
rhythm
  alpha, 175
ROC curve, 219

S
  sampling frequency, 153
SEEG, 73, 123
  sensors
    active, 135
    biocompatibility, 130
    electrodes, 316
    implants, 130
  sensorimotor rhythms, 55
signal processing, 186, 314
site authorization, 164
SMR, see sensorimotor rhythms
SQUID, 138
SSVEP, 17, 91, 206
stereoelectroencephalography (SEEG), 129
subjects selection criteria, 164
support vector machines, 212
switch, 106
syndrome
  Guillain-Barré, 43

T, V, W, X
  temporal accuracy measurement, 159
tetraplegia, 105
transhumanism, 277
trigger, see marker
variability, 67, 314
vegetative state, 4
video game, 85
  BCI Training Center, 94
  brain invaders, 89
  Cocoto Brain, 93
  mindshooter, 91
  use-the-force, 88
  virtual Dagobah, 91
virtual keyboard, 106
visualization, 65, 188
wide margin, 212
xDAWN, 232, 243
