Preface xiii
Biography xv

1 Introduction to Structural Health Monitoring 1
1.1 Advances in Structural Health Monitoring Technology 1
1.1.1 Structural Health in Civil Engineering 1
1.1.2 Aims of Structural Health Monitoring 2
1.1.3 Development of SHM Methods 3
1.2 Structural Health Monitoring System and Strategy 4
1.2.1 SHM System and its Components 4
1.2.2 SHM Strategy and Method 6
1.3 Potential Benefits of SHM in Civil Engineering 7
1.3.1 Character of SHM in Civil Engineering 7
1.3.2 Potential Benefits of SHM 9
1.4 Challenges and Further Work of SHM 10
1.4.1 Challenges of SHM in Civil Engineering 10
1.4.2 Further Work on SHM for Practical Applications 11
1.5 Concluding Remarks 13
References 13

2 Sensors and Sensing Technology for Structural Monitoring 15
2.1 Introduction 15
2.2 Sensor Types 16
2.3 Sensor Measurements in Structural Monitoring 21
2.3.1 Structural Responses 21
2.3.2 Environmental Quantities 24
2.3.3 Operational Quantities 25
2.3.4 Typical Quantities for Bridge Monitoring 25
2.3.5 Example of an SHM System – a Suspension Bridge (I) 27
2.4 Fibre Optic Sensors 33
2.4.1 Classification of Fibre Optic Sensors 33
2.4.2 Typical Fibre Optic Sensors in SHM 33
2.4.3 Fibre Optic Sensors for Structural Monitoring 36
2.5 Wireless Sensors 37
2.5.1 Components of Wireless Sensors 38
2.5.2 Field Deployment in Civil Infrastructure 39
2.6 Optimum Sensor Selection and Placement  39
  2.6.1 Factors for Sensor Selection  40
  2.6.2 Optimal Sensor Placement  41
2.7 Case Study  42
  2.7.1 Sensors and Sensing System for SHM  43
  2.7.2 Installation of FBG Sensors  43
2.8 Concluding Remarks  47
References  48

3 Data Acquisition, Transmission and Management  51
  3.1 Introduction  51
  3.2 Data Acquisition Systems  52
    3.2.1 Data Acquisition for Structural Monitoring  52
    3.2.2 Data Acquisition in Bridge Monitoring  53
  3.3 Data Transmission Systems  54
    3.3.1 Wired Transmission Systems  54
    3.3.2 Wireless Transmission Systems  55
    3.3.3 Data Transmission in Bridge Monitoring  56
  3.4 Data Processing Systems  57
    3.4.1 Data Pre-Processing for SHM  57
    3.4.2 Data Analysis and Compression  58
    3.4.3 Data Processing in Bridge Monitoring  58
  3.5 Data Management Systems  59
    3.5.1 Data Storage and File Management  59
    3.5.2 Data Management in Bridge Monitoring  60
  3.6 Case Study  61
  3.7 Concluding Remarks  64
References  66

4 Structural Damage Identification Techniques  69
  4.1 Introduction  69
  4.2 Damage in Structures  70
  4.3 Non-Destructive Testing Techniques  71
    4.3.1 Acoustic Emission  72
    4.3.2 Ultrasound  73
    4.3.3 Guided (Lamb) Waves  74
    4.3.4 Thermography  75
    4.3.5 Electromagnetic Methods  76
    4.3.6 Capacitive Methods  76
    4.3.7 Laser Doppler Vibrometer  77
    4.3.8 Global Positioning System  78
    4.3.9 Visual Inspection  79
  4.4 Comparison of NDT and SHM  79
  4.5 Signal Processing for Damage Detection  81
    4.5.1 Fourier Based Transforms  81
    4.5.2 Wavelet Transforms  81
    4.5.3 Hilbert–Huang Transform  83
6.3.1 Updating Parameters for Framed Structures 127
  6.3.1.1 Updating Stiffness and Mass at Element Level 127
  6.3.1.2 Updating Stiffness at Integration Point Level 127
  6.3.1.3 Updating Material and Sectional Properties 128
  6.3.1.4 Updating Joints and Boundary Conditions 128
  6.3.2 Updating Parameters for Continuum Structures 128

6.4 Sensitivity Based Methods 129
  6.4.1 Sensitivity Matrix 129
    6.4.1.1 Sensitivity of Eigenvalue 130
    6.4.1.2 Sensitivity of Eigenvector 130
    6.4.1.3 Sensitivity of Input Force 131
  6.4.2 Direct Parameter Estimation 131

6.5 Dynamic Perturbation Method 135
  6.5.1 Governing Equations 135
  6.5.2 Regularised Solution Procedure 137
  6.6 Use of Dynamic Perturbation Method for Model Updating 139
    6.6.1 Use of Frequencies Only 139
    6.6.2 Use of Incomplete Modes 140
    6.6.2.1 Iterative Solution Method 142
    6.6.2.2 Simplified Direct Solution Method 142
    6.6.3 Example for Model Updating – a Plane Frame 143
    6.6.4 Example for Model Updating – a Steel Space Frame (II) 145
  6.7 Case Study 149
  6.8 Concluding Remarks 151

References 153

7 Vibration-Based Damage Identification Methods 155
  7.1 Introduction 155
  7.2 Structural Modelling for Damage Identification 156
  7.3 Methods Using Change of Modal Parameters 159
    7.3.1 Natural Frequencies 159
    7.3.2 Direct Mode Shape Comparison 160
    7.3.3 Mode Shape Curvature 161
    7.3.4 Damping 162
    7.3.5 Frequency Response Function Curvature 162
    7.3.6 Modal Strain Energy 163
    7.3.7 Example for Damage Localisation – a Suspension Bridge (II) 165
  7.4 Methods Using Change of Structural Parameters 169
    7.4.1 Flexibility Matrix 169
    7.4.2 Strain Energy Based Damage Index 172
    7.4.3 Modal Strain-Based Damage Index 174
    7.4.4 Example for Damage Localisation – a Suspension Bridge (III) 175
  7.5 Pattern Recognition Methods 177
    7.5.1 Stochastic Pattern Recognition 178
7.5.2 Novelty Detection 179
7.5.3 Example for Damage Detection – a Suspension Bridge (IV) 180

7.6 Neural Network Techniques 182
7.6.1 Back-Propagation Neural Network 182
7.6.2 Input Parameters and Pre-Processing 184
7.6.3 Probabilistic Neural Network 185
7.6.4 Example for Damage Localisation – a Suspension Bridge (V) 186

7.7 Concluding Remarks 189

References 190

8 Model-Based Damage Assessment Methods 195
8.1 Introduction 195
8.2 Characterisation of Damage in Structures 196
8.2.1 Damage in Framed Structures 197
8.2.1.1 Damage Characterisation at Element Level 197
8.2.1.2 Damage Characterisation at Critical Point Level 197
8.2.2 Damage in Continuum Structures 199
8.2.2.1 Damage Characterisation at Element Level 199
8.2.2.2 Damage Characterisation at Integration Point Level 199
8.3 Matrix Update Methods 200
8.3.1 Residual Force Vector Method 200
8.3.2 Minimum Rank Update Method 201
8.3.3 Optimal Matrix Updating Method 202
8.3.4 Example for Damage Assessment – a Plane Truss 203
8.4 Sensitivity Based Methods 204
8.4.1 Eigen-Parameter Sensitivity Method 204
8.4.2 FRF Sensitivity Method 205
8.4.3 Example for Damage Assessment – a Grid Structure 207
8.5 Damage Assessment Using Dynamic Perturbation Method 207
8.5.1 Use of Frequencies Only 208
8.5.2 Use of Incomplete Modes 209
8.5.3 Examples for Damage Assessment – Simple Framed Structures 211
8.5.3.1 Damage Assessment of a Grid Structure Using Frequencies Only 211
8.5.3.2 Damage Assessment of a Plane Truss Using Incomplete Modes 212
8.6 Numerical Examples 213
8.6.1 Framed Building Structure 213
8.6.2 Gravity Dam Structure 218
8.7 Potential Problems in Vibration-Based Damage Identification 220
8.7.1 Finite Element Model and Experimental Data 220
8.7.2 Effect of Modelling and Measurement Errors 221
8.7.3 Effect of Environmental Factors 222
8.7.4 Frequency Range and Damage Detectability 222
8.7.5 Damage Diagnosis and Prognosis 223
8.8 Concluding Remarks 224
