- ambient temperature 24, 25, 30–32, 36, 39, 49, 91, 233, 263
- analysis method
  - curve 87, 210
  - frequency-domain 211, 213
  - three-level assessment 198, 207
  - time-domain 211
- anode 230–233
- AS (ancillary service) 243–245
- automatic voltage control (AVC) 125, 130, 139, 147
- automobile company C1 114–116
- available reactive capacity 130, 131
- AVC see automatic voltage control (AVC)
- average sensitivity value 257, 258

### b
- battery company C2 114–116
- battery energy storage system (BESS) 19, 20, 230–233, 242, 271, 300–309 see also energy storage
- bidirectional power flow 10

### c
- CAP (capacity absorption planning) 244
- capacitor banks 130, 131, 140, 141, 144–162 see also static capacitor (SC)
- CASP (capacity/ancillary service program) 243
- cathode 230–233
- cell
  - flow 229, 232, 233
  - heterojunction solar 20
  - homojunction solar 20
  - multi-junction solar 20
  - noncrystalline silicon semiconductor 21
  - organic solar 21
  - PV 2, 5, 6, 19–26, 29–31, 39, 171
  - Schottky junction solar 20
  - silicon solar 2, 21–23
  - thin-film solar 20
  - wet PV 20
- charging/discharging controller of battery 19
- CHP generation 17
- close-loop control 38
- combined heat and power generation see CHP generation
- community partition theory 254
- connection topology between inverter and PV 26–28
  - centralized 26
  - control logic 131
  - module integrated 26–28
  - multiple series 26–28
  - control principle 132, 133
- constrained optimization method 82–84
  - algorithms 82
  - random scenario 88–94
- converter
  - DC-DC 33
  - flyback 29
  - rear-end 29, 34
- correlation coefficient 79–81
