Preface to First Edition  xvii  
Preface to Second Edition  xxi  

**CHAPTER 1  Introduction**  1  

1.1 Electromagnetic Environment  1  
1.2 Historical Notes  1  
  1.2.1 Pre-World War II Era  1  
  1.2.2 World War II and the Next Twenty-Five Years  3  
  1.2.3 The Last Twenty-Five Years  4  
1.3 Concepts of EMI and EMC and Definitions  6  
1.4 Practical Experiences and Concerns  8  
  1.4.1 Transmission Lines  9  
  1.4.2 Mains Power Supply  9  
  1.4.3 Switches and Relays  10  
  1.4.4 Telephone Equipment  10  
  1.4.5 Radio Astronomy  10  
  1.4.6 Biological Effects  10  
  1.4.7 Aircraft Navigation  11  
  1.4.8 Military Equipment  11  
  1.4.9 Secure Communications  12  
  1.4.10 Integrated Circuits  13  
1.5 Frequency Spectrum Conservation  13  
  1.5.1 Transmitters and Receivers  13  
  1.5.2 Spectrum Space  14  
  1.5.3 Telecommunications  15  
  1.5.4 Trends  16  
1.6 An Overview of EMI and EMC  17
Contents

CHAPTER 4 Probabilistic and Statistical Physical Models 77

4.1 Introduction 77
4.2 Probability Considerations 78
4.3 Statistical Physical Models 78
4.4 Modeling of Interferences 79
  4.4.1 Classification of Interferences 79
  4.4.2 Class A Interference 80
  4.4.3 Class B Interference 82
  4.4.4 Examples 85
4.5 Statistical EMI/EMC Models 85
  4.5.1 EM Noise from the Environment 86
  4.5.2 Electromagnetic Interference in Circuits 88
  4.5.3 Statistical Models for Equipment Emissions 88
4.6 Summary 89
  References 89
  Assignments 90

CHAPTER 5 Open-Area Test Sites 91

5.1 Introduction 91
5.2 Open-Area Test Site Measurements 92
  5.2.1 Measurement of RE 92
  5.2.2 Measurement of RS 92
  5.2.3 Test Site 93
  5.2.4 Test Antennas 93
5.3 Measurement Precautions 93
  5.3.1 Electromagnetic Environment 94
  5.3.2 Electromagnetic Scatterers 94
  5.3.3 Power and Cable Connections 94
6.6.5 Measurement Uncertainties 148
References 148
Assignments 149

CHAPTER 7  Conducted Interference Measurements 151
7.1 Introduction 152
7.2 Characterization of Conduction Currents/Voltages 152
  7.2.1 Common-Mode and Differential-Mode Interferences 152
  7.2.2 Examples of CM and DM Interferences 153
7.3 Conducted EM Noise on Power Supply Lines 154
  7.3.1 Transients on Power Supply Lines 154
  7.3.2 Propagation of Surges in Low-Voltage AC Lines 155
  7.3.3 Conducted EMI in Ships and Aircraft 156
7.4 Conducted EMI from Equipment 157
  7.4.1 Instrumentation for Measuring Conducted EMI 157
  7.4.2 Experimental Setup for Measuring Conducted EMI 161
  7.4.3 Measurement of CM and DM Interferences 164
7.5 Immunity to Conducted EMI 166
7.6 Detectors and Measurement 167
References 168
Assignments 169

CHAPTER 8  Pulsed Interference Immunity 171
8.1 Introduction 171
8.2 Pulsed EMI Immunity 171
8.3 Electrostatic Discharge 172
  8.3.1 ESD Pulse 172
  8.3.2 Electrostatic Discharge Test 174
  8.3.3 ESD Test Generator 178
  8.3.4 ESD Test Levels 181
8.4 Electrical Fast Transients/Burst 182
  8.4.1 EFTs/Burst 182
  8.4.2 Test Bed for EFT Immunity 183
  8.4.3 EFT/Burst Generator 184
  8.4.4 EFT/Burst Tests 186
8.5 Electrical Surges 187
  8.5.1 Surges 187
  8.5.2 Surge Testing 188
  8.5.3 Surge Test Waveforms 189
8.6 Summary 192
References 193
Assignments 193
CHAPTER 11  Cables, Connectors, and Components  277

11.1 Introduction  277
11.2 EMI Suppression Cables  277
   11.2.1 Absorptive Cables  278
   11.2.2 Ribbon Cables  281
11.3 EMC Connectors  282
   11.3.1 Pigtail Effect  282
   11.3.2 Connector Shielding  282
   11.3.3 Connector Testing  283
   11.3.4 Intermodulation Interference (Rusty Bolt Effect)  285
11.4 EMC Gaskets  286
   11.4.1 Knitted Wire-Mesh Gaskets  286
   11.4.2 Wire-Screen Gaskets  287
   11.4.3 Oriented Wire-Mesh  287
   11.4.4 Conductive Elastomer  288
   11.4.5 Transparent Conductive Windows  288
   11.4.6 Conductive Adhesive  288
   11.4.7 Conductive Grease  289
   11.4.8 Conductive Coatings  289
11.5 Isolation Transformers  289
11.6 Opto-Isolators  292
11.7 Transient and Surge Suppression Devices  292
   11.7.1 Gas-Tube Surge Suppressors  293
   11.7.2 Semiconductor Transient Suppressors  297
   11.7.3 Transient Protection Hybrid Circuits  300
11.8 EMC Accessories: An Overview  300
   11.8.1 Cables  301
   11.8.2 Connectors  301
   11.8.3 Ferrite Components  302
   11.8.4 EMC Gaskets  303
   11.8.5 Transient Protection Devices  303
   11.8.6 Concluding Notes  304
References  304

CHAPTER 12  Frequency Assignment and Spectrum Conservation  307

12.1 Introduction  307
12.2 Frequency Allocation and Frequency Assignment  307
   12.2.1 The Discipline  307
   12.2.2 Spectrum Utilization  309
   12.2.3 Evaluation of Spectrum Utilization  310
CHAPTER 13  EMC Computer Modeling and Simulation  333

13.1 Introduction  333
13.2 A Generalized & Comprehensive Assessment Methodology  334
13.3 EMC Analysis of Complex Systems  335
    13.3.1 Modeling Techniques, Physics Formalisms Solution Methods  337
    13.3.2 Electromagnetic Analysis and Prediction Codes  345
13.4 Illustrating an Automated System Level EMC Analysis Procedure  350
    13.4.1 Numerical Code Exterior System Modeling  354
    13.4.2 Interior System Modeling Using Numerical Codes  356
    13.4.3 Modeling and Analysis Procedure  358
13.5 The Future of EMC Computer Modeling and Simulation  358
    13.5.1 Application of Expert Systems and Other Advanced Software Technologies  362
    13.5.2 Expert System Based EMC Packages  363
13.6 Summary  364
    Reference  365
    Exercises  366
    Assignments  367

CHAPTER 14  Signal Integrity  369

14.1 Introduction  369
14.2 SI Problems  370
    14.2.1 Typical SI Problems  370
    14.2.2 Where SI Problems Happen  371
    14.2.3 SI in Electrical Packaging  371
CHAPTER 14  
SI Analysis  
14.3 SI Analysis  372  
14.3.1 SI Analysis in Design Flow  372  
14.3.2 Principles of SI Analysis  374  
14.4 SI Issues in Design  376  
14.4.1 Rise Time and SI  376  
14.4.2 Transmission Lines, Reflection, Cross Talk  376  
14.4.3 Power Ground Noise  378  
14.5 Modeling and Simulation  380  
14.5.1 EM Modeling Techniques  380  
14.5.2 SI Tools  380  
14.5.3 IBIS  382  
14.6 An SI Example  383  
References  385  

CHAPTER 15  
EMC Standards  
15.1 Introduction  387  
15.2 Standards for EMI/EMC  388  
15.3 MIL-STD-461/462  389  
15.3.1 Conducted Interference Controls  389  
15.3.2 Radiated Interference Controls  391  
15.3.3 Susceptibility at Intermediate Levels of Exposure  392  
15.3.4 Other Military Standards  392  
15.4 IEEE/ANSI Standards  392  
15.4.1 Test and Evaluation Methods  393  
15.5 CISPR/IEC Standards  393  
15.5.1 Test and Evaluation Methods  394  
15.6 FCC Regulations  394  
15.7 British Standards  395  
15.8 VDE Standards  395  
15.9 Euro Norms  396  
15.10 EMI/EMC Standards in Japan  398  
15.11 Performance Standards—Some Comparisons  398  
15.11.1 Military Standards  398  
15.11.2 IEC/CISPR Standards  399  
15.11.3 ANSI Standards and FCC Specifications  400  
15.11.4 Pulsed Interference Immunity  401  
15.12 Summary  402  
15.13 Update-2000  402  
15.13.1 Military Standards  402  
15.13.2 ANSI/IEEE Standards  403  
15.13.3 CISPR/IEC Standards and Euronorms  404  
15.13.4 Standards and Test Procedures  404  
References  405
CHAPTER 16  

Selected Bibliography  407

16.1 Practical Effects of EMI and Associated Concerns  407
16.2 Electromagnetic Noise: Sources and Description  408
16.3 Open-Area Test Site Measurements  411
16.4 Laboratory Measurement of RE/RS  411
16.5 Measurement of CE/CS  413
16.6 Pulsed Interference Immunity Measurements  413
16.7 Grounding, Shielding, and Bonding  414
16.8 EMC Filters  417
16.9 EMC Components  417
16.10 Spectrum Management and Frequency Assignment  419
16.11 EMC Computer Models  419
16.12 Signal Integrity  423

APPENDIX 1  

EMC Terminology  425

APPENDIX 2  

EMI/EMC Units  435

APPENDIX 3  

Books On Related Topics  437

APPENDIX 4  

EMI/EMC Standards  441

APPENDIX 5  

EMC e-Resources  447
