## Contents

Preface vii

### A: Introduction: Selectivity
1. Planning Organic Syntheses: Tactics, Strategy and Control 3
2. Chemoselectivity 7
3. Regioselectivity: Controlled Aldol Reactions 19
4. Stereoselectivity: Stereoselective Aldol Reactions 35
5. Alternative Strategies for Enone Synthesis 47
6. Choosing a Strategy: The Synthesis of Cyclopentenones 57

### B: Making Carbon–Carbon Bonds
7. The Ortho Strategy for Aromatic Compounds 71
8. σ-Complexes of Metals 91
9. Controlling the Michael Reaction 103
10. Specific Enol Equivalents 115
11. Extended Enolates 123
12. Allyl Anions 135
13. Homoenolates 147
14. Acyl Anion Equivalents 155

### C: Carbon–Carbon Double Bonds
15. Synthesis of Double Bonds of Defined Stereochemistry 171
16. Vinyl Anions 191
17. Electrophilic Attack on Alkenes 203
18. Vinyl Cations 221
19. Allyl Alcohols: Allyl Cation Equivalents (and More) 241

### D: Stereochemistry
20. Control of Stereochemistry—Introduction 259
21. Diastereoselectivity 269
22. Resolution 283
23. The Chiral Pool: Asymmetric Synthesis with Natural Products as Starting Materials 295
24. Asymmetric Induction I: Reagent-Based Strategy 309
27. Asymmetric Induction IV: Substrate-Based Strategy 351
28. Kinetic Resolution 365
29. Enzymes: Biological Methods in Asymmetric Synthesis 377
30. New Chiral Centres from Old: Enantiomerically Pure Compounds and Sophisticated Syntheses 391
31. Strategy of Asymmetric Synthesis 405

E: Functional Group Strategy 417
32. Functionalisation of Pyridine 419
33. Oxidation of Aromatic Rings and of Enol(ate)s 433
34. Functionality and Pericyclic Reactions: Nitrogen Heterocycles by Cycloadditions and Sigmatropic Rearrangements 447
35. Synthesis and Chemistry of Azoles and other Heterocycles with Two or more Heteroatoms 459
36. Tandem Organic Reactions 473

Index 483
