nanoprobes for single-object imaging 222–3
nano-rattles 287
near-field optical microscopy 68
near infrared excitation/emission (NIR-NIR) imaging 180–181, 223–5
neodymium
  allowed and forbidden f/f transitions 33
  bioimaging 181
  chemosensors 239–40, 245–6, 256, 261–2
  circularly polarised luminescence 93
  crystal field parameters 27
  direct excitation Ln(III) luminescence spectroscopy 310, 312, 316, 322
  heterometallic complexes 342, 349–50
  Judd–Ofelt theory 37
  spectroscopic techniques 73
  spin–orbit coupling 11
  two-photon absorption 209
  neutrophils 155–7
nickel 336
NIR-NIR see near infrared excitation/emission
NMR see nuclear magnetic resonance
nonlinear optics (NLO) 197–205
nonlinear transmission method 199
non-radiative quenching
  direct excitation Ln(III) luminescence spectroscopy 308–14, 318–20, 322–6
  sensitization mechanism 40–41, 44–5
  nuclear magnetic resonance (NMR) spectroscopy 78, 334–5

O
oblique illumination 128
oligochitosan 150–151
one-electron wave functions 5–7
optical parametric oscillator (OPO) 66
optical sectioning 271, 283, 291–2
optical sensors 303–4
opto-electronic shutters 141
organic luminophores 126
osmium 347, 349
outer-sphere quenching 309–10, 314, 318–20, 322–6

P
palladium 155–7
PALM see photoactivation localization microscopy
PAMAM see polyamidoamine
paramagnetic chemical exchange saturation transfer (paraCEST) 322–6
parity rule 29–30, 34, 206
PCEM see point charge electrostatic moment
PD see power density
PDMS see polydimethylsiloxane
PDZ domain 158–9
PEM see photo-elastic (or elasto-optic) modulator
PeT see photoinduced electron transfer
PET see positron emission tomography
Pfeiffer effect 96–8
phantom images 324–5
phase contrast microscopy 128
pH low insertion peptide (pHLIP) 161–2
phosphate ester binding and cleavage 317–18
phosphorescence
antenna effect 40–42
bioimaging 131–2, 138
photoactivation localization microscopy (PALM) 68
photo-avalanche mechanism 275
photobleaching 129, 201
photo-elastic (or elasto-optic) modulator (PEM) 86–8, 90–91
photoinduced electron transfer (PeT) 237–8, 348–9
photoluminescence 274
photomultiplier tubes (PMTs) 66–7
pseudorotaxanes 352–3
pulsed excitation/gated detection 54, 65
pulsed nitrogen lasers 66
Q
quantum dots (QDs) 126
quantum yield 39
absolute measurement with integrating sphere 72–3
bioimaging 153, 168–9
chemosensors 232
measurement against standard in solid-state 71–2
measurement against standard in solution 70–71
spectroscopic techniques 69–73
two-photon absorption 203, 210
up-converting nanoparticles 275–6, 291
R
radial charge density distribution 2–3
rate constants 39–40, 45
ratiometric peaks 233
repulsive Coulomb energy 8
responsive multimetallic systems 351–3
rhenium 344–7
rotation formula 30
Russell–Saunders quantum number 2–3
see also spin–orbit coupling
ruthenium 261, 336–7, 347–9
S
samarium
bioimaging 163, 174–5
circularly polarised luminescence 83, 93, 99
direct excitation Ln(III) luminescence spectroscopy 306–10
spectroscopic techniques 73
SBMC see streptavidin-based macromolecular complex
scanning microscopy 216, 222
scanning monochromators 63–4
Schrödinger equation 4, 7
see also Hamiltonian operator
self-assembled chemosensors 235–7
self-assembled triple helix bioprobes 171–7
cell penetration and imaging 174–5
cytotoxicity 174
heterometallic complexes 338–41
photophysical properties 173–4
specific targeting with bioconjugated luminescent probes 175–6
structure, thermodynamic stability and kinetic inertness 171–3
sensitization mechanism 40–45
antenna effect 40–44, 207–10
charge transfer state mediated 209–11
energy transfer 40–44
intersystem crossing 40–42
non-radiative quenching 40–41, 44–5
singlet and triplet states 40–42
two-photon absorption 207–11
sensitised emission 2
signal saturation 129
signal to noise ratio (SNR) 131–2, 248
silver 336
SIM see structured illumination microscopy
simple overlap model (SOM) 26–7
single-object imaging 222–3
Slater two-electron radial integrals 8
slit width 64–5
SNR see signal to noise ratio
sodium 237–40
sol-gel 214, 222
solid-state inorganic ion exchange matrices 56
SOM see simple overlap model
SOS see sum-over states
spark spectroscopy 1
spectrographs 63–4
spectroscopic techniques 49–75
absolute measurement with integrating sphere 72–3
adapting experiments for diverse samples 52–3
ancillary components 67
antenna effect 53, 55
challenges in experiment design and interpretation 52–7
common luminescence experiments 57–60
components and characteristics 63–7
concepts and definitions 49–52
design elements and configurations 61–3
detectors 66–7
excitation sources 65–6
excited state lifetimes 73
in-solution measurements 70–71
instrumentation in luminescence spectroscopy 52–69
instrument modules 61–2
luminescence emission spectra 49–51, 58
luminescence excitation spectra 49–51, 58–9
luminescence lifetime measurements 59–60
monochromators 63–4
number of coordinated solvent molecules 73
quantum yield measurement 69–73
recent advances in instrumentation 67–9
resolving and assigning spectral bands 55–7
resolving weak emission from intense background 53–5
solid-state measurements 71–2
spectral range for Ln(III) ions 49–51
standards 70–72
time-resolved emission and excitation spectra 60
typical absorption and emission spectra 49–50
spin coordinates 7
spin–orbit coupling 9–13
spin rule 29
splitting energy 20–21
square antiprism 23–4
Stark effect 9–10, 13–20
crystal field parameters and symmetry 14–18
energies of crystal field split terms 18–20
expectation values 14
STED see stimulated emission depletion
Stern–Volmer constants 167
stimulated emission depletion (STED) 68
stochastic optical reconstruction microscopy (STORM) 68
streptavidin-based macromolecular complex (SBMC) 138
structured illumination microscopy (SIM) 68
sum-over states (SOS) method 201–2
super-resolution techniques 68
symmetry
allowed and forbidden $f$/$f$ transitions 30–32
crystal field parameters 14–18
synchrotron radiation 280–282

T
TCSPC see time-correlated single photon counting
TEM see transmission electron microscopy
terbium bioimaging 155–60, 163–7, 169–77
chemosensors 237–9, 241–3, 245, 249,
251–6, 258–60, 262
circularly polarised luminescence 83–4, 95,
99–100, 104, 108–9, 111–12
direct excitation Ln(III) luminescence
spectroscopy 306–10
heterometallic complexes 332, 343–5, 347, 
350–351
non-radiative quenching 45
spectroscopic techniques 55, 73
two-photon absorption 206–8, 212, 
214–18
up-converting nanoparticles 294
terpyridine-based ligands 156, 178–9
thalidomide 77
theranostics 125
three-level model 202–3
thulium bioimaging 181
direct excitation Ln(III) luminescence
spectroscopy 306, 322
heterometallic complexes 335
up-converting nanoparticles 274–6, 
284–90, 292
time-correlated single photon counting
(TCSPC) 69, 131
time-gated spectroscopy 214–15
time-resolved amplified cryptate emission
(TRACE) 170
time-resolved circularly polarised luminescence
(CPL) 87
time-resolved detection (TRD)
bioimaging 126–7, 131–4, 136–8, 148,
160–163, 171
direct excitation Ln(III) luminescence
spectroscopy 308–10, 317
emission and excitation spectra 60, 69
time-resolved luminescence microscopy
(TRLM) 127, 131–44
commercial instruments 143–4
early instrumental developments
134–40
lanthanide luminescent bioprobes and
bioconjugates 133, 134–40
optimization of instrumentation
140–144
principles 131–4
tip enhanced optical microscopy 68
total internal reflection fluorescence microscopy
(TIRFM) 139–40
TPEF see two-photon excited fluorescence
TPUWF see two-photon upconversion wide
field microscopy
TRACE see time-resolved amplified cryptate
emission
transition probabilities 37–8
transmetallation reactions 333–4
transmission electron microscopy (TEM) 
278–81, 283–7
transparency window 200, 223, 271
TRD see time-resolved detection
tricapped trigonal prism 24
TRLM see time-resolved luminescence
microscopy
tumour detection
lanthanide luminescent bioprobes and
bioconjugates 162–3, 165, 176
time-resolved luminescence
microscopy 135–6
two-photon absorption 222–3
up-converting nanoparticles 285–93
two-photon absorption 197–230
antenna effect 207–14, 220–221, 224–5
bioimaging 200–201, 203–5
biphotonic microscopy imaging 200–201,
203–5, 215–25
breakthrough experiments 205–6
brightness trade-off 211–14
charge transfer state mediated
sensitization 209–11
concepts and definitions 197–8
excitation of f–f transitions 206–7
excited luminescence in solid matrix 214
experimental determination of 2PA
efficiency 199–200
heterometallic complexes 348–9
molecular engineering for multiphotonic
imaging 201–5, 216–17
nanoprobes for single-object imaging
222–3
NIR-NIR imaging 223–5
nonlinear optics 197–205
nonlinear transmission method 199
optimization of molecular two-photon cross
section 211–14
sensitization mechanism 207–11
spectroscopic evidence 205–15
Index

two-photon absorption (Continued)
  theoretical and historical background 198–9, 205–6
time-gated spectroscopy 214–15
two-photon excited fluorescence
  procedure 199–200
  Z-scan method 199
two-photon excited fluorescence (TPEF)
  procedure 199–200
