Contents

Contributors ix
Foreword xii
David Botstein
Introduction xiii
Nina V. Fedoroff

Chapter 1 The Discovery of Transposition 3
Nina V. Fedoroff
Introduction 3
Studies on Variegation 3
Mutable Genes 5
McClintock’s Studies on Chromosome Breakage 6
Recognition that \( Ds \) Transposes 8
Explaining Mutable Genes 9
Molecular Endnote 12
References 12

Chapter 2 A Field Guide to Transposable Elements 15
Alan H. Schulman and Thomas Wicker
The C-value Paradox 15
The Quantity of Transposable Elements Determines Genome Size 16
General Classification Scheme for Transposable Elements 17
Class II Elements 19
Class I: The Non-LTR and LTR Retrotransposons 20
Evolutionary Origins of Transposable Elements 25
Non-autonomous Transposable Elements 28
Transposable Element Demography and Genome Ecology 30
Conclusions: Rehabilitation of Transposable Elements 32
Acknowledgments 34
References 34
Chapter 3  The Mechanism of Ac/Ds Transposition  
Thomas Peterson and Jianbo Zhang

Transposition of Ac/Ds Elements  41
The Enigmatic Ac Dosage Effect  42
cis and trans Effects on Ac/Ds Transposition  43
Molecular Characterization of Transposable Elements  44
The Excision and Insertion Reactions  45
Formation of Ds from Ac  48
Standard versus Alternative Transposition  48
Sister Chromatid Transposition  48
Reversed-ends Transposition  51
How Does Ds Break Chromosomes?  53
Alternative Transposition, DNA Methylation, and the Sequence of Transposition Reactions  54
Potential Applications of Alternative Transposition  55
Perspective  56
References  56

Chapter 4  McClintock and Epigenetics  
Nina V. Fedoroff

Introduction  61
Spm-suppressible Alleles  61
Spm-dependent Alleles  64
Cryptic Spm  66
Presetting  66
Molecular Machinery of Epigenetic Regulation  67
Summary  68
References  69

Chapter 5  Molecular Mechanisms of Transposon Epigenetic Regulation  
Robert A. Martienssen and Vicki L. Chandler

Introduction  71
Chromatin Remodeling, DNA and Histone Modification  73
RNA Interference (RNAi) and RNA-Directed DNA Methylation (RdDM)  75
Heterochromatin Reprogramming and Germ Cell Fate  79
Transgenerational Inheritance of Transposon Silencing  82
Paramutation  83
Conclusions  85
References  85

Chapter 6  Transposons in Plant Gene Regulation  
Damon R. Lisch

Introduction  93
New Regulatory Functions  94
TE-Induced Down-Regulation  97

CONTENTS

Copy-and-Paste TEs and Speciation 168
TE-Mediated Speciation – a Likely Scenario? 169
Plant Speciation Through Hybridization and Allopolyploidization 169
Induction of Transposition upon Hybridization and Polyploidization 170
Epigenetic Alteration of TEs upon Hybridization and Polyploidization 170
Transcriptional Activation of TEs upon Hybridization and Polyploidization 171
Alterations in Small RNAs upon Hybridization and Polyploidization 171
A Mechanistic Model for Responses to Genome Shock 172
Dysregulation of Gene Expression by Novel Interactions Between Regulatory Factors 173
Altered Protein Complexes 174
Why TEs Become Activated when Cellular Processes are Dysregulated 174
Conclusions 175
Acknowledgments 176
References 176

Chapter 10 Transposons, Genomic Shock, and Genome Evolution 181
Nina V. Fedoroff and Jeffrey L. Bennetzen

How Transposons Came to be Called “Selfish” DNA 181
The “Selfish DNA” Label Stuck to Transposons 182
Transposons Coevolved with Eukarotic Genomes 182
Sequence Duplication: The Real Innovation 183
The Facilitator: Epigenetic Control of Homologous Recombination 183
Epigenetic Mechanisms, Duplication and Genome Evolution 185
Plant Genome Organization: Gene Islands in a Sea of Repetitive DNA 186
Transposon Neighborhoods and Insertion Site Selection 187
Genome Evolution: Colinearity and Its Erosion 189
Genome Contraction and Divergence of Intergenic Sequences 191
Transposases Sculpt Genomes 192
Small Regulatory RNAs from Transposons 193
Genome Shocks 194
Genome Evolvability 195
References 196
