## Index

Page numbers in *italics* refer to illustrations; those in **bold** refer to tables

- **ablative procedures** 92–93, 399, **411–413**
  - history of 7, 16, 400
  - mechanisms of action 93
  - response predictors 93
  - surgical approaches 410–411
  - versus deep brain stimulation 248
  - see also specific conditions and procedures

- **action potentials** 102–103, 129
  - initiation 128–129

- **activation**
  - deep brain stimulation effects 247
  - electroconvulsive therapy effects 89
  - fMRI studies 52, 53

- **addiction** 408
  - deep brain stimulation 309–312
  - neurocircuits involved 27, 28, 408–410, 409
  - corpus callosum 36
  - dorsal anterior cingulate cortex 30
  - dorsolateral prefrontal cortex 30, 410
  - mesolimbic pathway 408
  - orbitofrontal cortex 28, 410
  - striatum 31, 408–409
  - supramammillary nucleus 410
  - uncinate fasciculus 35
  - ventral medial prefrontal cortex 29
  - prevalence 408

- **transcranial direct current stimulation** 238

- **transcranial magnetic stimulation** 187–190
  - alcohol dependence 189
  - cocaine dependence 188–189
  - methamphetamine dependence 189
  - tobacco dependence 187–188

- **aggressive behaviour** 317
  - deep brain stimulation 317–319
  - radiofrequency lesioning 387
  - alcohol dependence 189

- **deep brain stimulation** 311
  - transcranial direct current stimulation 238
  - see also addiction

- Alzheimer’s disease 192, 312
  - deep brain stimulation 312–315, 313

- amygdala 401–403, 445

- **amygdalectomy** 387

- anaesthesia 257
  - electroconvulsive therapy 441–442
  - radiofrequency lesioning 390–391

- anodic stimulation 103, 103

- anorexia nervosa 62, 319
  - deep brain stimulation 319–320

- anterior capsulotomy 36, 38, 93, 369, 411–414, 414
  - adverse effects 414

- Gamma Knife radiosurgery 387
  - obsessive compulsive disorder therapy 387

- radiofrequency lesioning 392–393, 393

- anterior cingulate circuit 386

- anterior cingulate cortex (ACC) 404
  - abnormalities in psychiatric disorders 29–30, 304, 408, 410
  - dorsal ACC (dACC) 28, 29–30
  - connections 29
  - transcranial magnetic stimulation 189

- treatment response prediction 82

- anterior cingulotomy 36, 38, 93, 369, 414–416, 414
  - adverse effects 415–416

- Gamma Knife radiosurgery 387

- major depression 387, 415

- obsessive compulsive disorder therapy 387, 415

- radiofrequency lesioning 391–392, 392

- reoperation 415

Schaltenbrand–Wahren brain atlas 251
schizophrenia 181
- auditory hallucination management 183–184, 185–186, 235–236
- cognitive function improvement 182, 235, 237–238
- deep brain stimulation 316–317
- electroconvulsive therapy 89, 431
- maternal exposure to infection during pregnancy relationship 316
neurocircuits involved 27, 28
- anterior limb of the internal capsule 32
cingulum bundle 35
corpus callosum 36
dorsal anterior cingulate cortex 30
dorsolateral prefrontal cortex 30
orbitofrontal cortex 28–29
striatum 31
uncinate fasciculus 35
ventral medial prefrontal cortex 29
transcranial direct current stimulation 61, 235–236
- maintenance treatment 236
transcranial magnetic stimulation 181–187
- negative symptom management 182
- positive symptom management 182
seizures
- cerebral blood flow changes 444
subcaudate tractotomy adverse effects 416
- threshold 444
vagus nerve stimulation effects 326
see also electroconvulsive therapy (ECT); magnetic seizure therapy (MST)
self 18–19
self-mutilation 318
self-stimulation 4
septal stimulation 4–5
serotonergic system
- electroconvulsive therapy effects 90
- vagus nerve stimulation effects 326
sertraline 235
sham methods, transcranial direct current stimulation 215–216
skin damage
- deep brain stimulation 266, 267
- transcranial direct current stimulation 207, 229–230
sleep disturbance 443
- electroconvulsive therapy benefits 443–444
sliding window technique 54–55
smoking 187–188, 311
status epilepticus 431–432
stereotactic frames 245–246, 253, 254
- Cosman–Roberts–Wells (CRW) frame 253, 254, 257
- frameless devices 253–255
- Gamma Knife radiosurgery 357
- Leksell frame 245, 246, 257
- microTargeting platform 254, 255
- Riechert–Mundinger frame 253
- Zamorano–Duchovny (ZD) frame 253
stereotactic neurosurgery 16, 92–93, 399
- accuracy 255
- anaesthetic considerations 257
- closure and recovery 262–263
- complications 264–265, 266, 284–285, 302
- hardware-related 265–267
- infections 265, 284
- skin erosion 266, 267
- stimulation-related 265
- surgical complications 265, 284–285
- coordinate systems and atlases 251–253
- electrode planning 251, 252
- frame placement 255–256
- future directions 267–268
- history 2, 245–246
- imaging 256
- intraoperative emergencies 263
- intraoperative radiological control 262
- opening 257–259, 258
- operating room set-up 256–257
- physiological mapping and lead placement 260–262, 261
stereotactic neurosurgery (cont’d)
post-operative care 264
pre-operative evaluation 250–251
pulse generator placement 263–264
programming 264
replacement 264
surgical planning 256–257
target selection 259–260
see also deep brain stimulation (DBS); Gamma Knife radiosurgery; radiofrequency lesioning (RF); stereotactic frames
striata 30–31, 405
abnormalities in psychiatric disorders 31, 405, 406, 408–410
dopamine release 31
stroke 116–117
subcallosal cingulate gyrus (SCG)
abnormalities in major depression 62
deep brain stimulation 38, 62, 278–281, 279
subcaudate tractotomy 93, 416
adverse effects 416
Gamma Knife radiosurgery 369
obcessive compulsive disorder 387, 393–394
radiofrequency lesioning 393–394, 394
substance abuse see addiction
subthalamic nucleus 300
deep brain stimulation 300, 312
addiction 312
obcessive compulsive disorder 300–301
suicide 455
suicidal thoughts following deep brain stimulation 286–287
superior frontal gyrus (SFG) 188
supplementary motor area (SMA) 193
supramammillary nucleus (SUM) 410
supramarginal gyrus 184
synaptic plasticity 114–115
repetitive transcranial magnetic stimulation relationship 136–140
see also plasticity
synaptic transmission modulation 107
long-term depression (LTD) 113, 140
long-term potentiation (LTP) 113, 140

Talairach brain atlas 251
Talairach–Tourneau brain atlas 251
task-elicited functioning 86–87
temporoparietal cortex (TPC), auditory hallucinations and 181, 183–184
thalamic stimulation 247
theory of mind 61
therapeutic misconception 19
thionpental 441
thrombospindin-1 (TSP-1) 445
tissue plasminogen activator (tPA) 445
tobacco dependence 187–188, 311
Tourette syndrome (TS) 387
deep brain stimulation 7
Gamma Knife radiosurgery 371
radiofrequency lesioning 387
tract-based spatial statistics (TBSS) 51
transcranial direct current stimulation (tDCS) 90, 111–112, 203
adverse effects 212–213, 213, 229–230
questionnaire 214
combined therapy 238
contraindications 207
devices 205
dorsolateral prefrontal cortex 38–39, 90
ethical issues 217–219
autonomy 218
cognitive enhancement 217–218
future directions 238–239
high-definition (HD-tDCS) 65, 204, 229
historical background 203–204
mechanisms of action 207–212, 229
computer-modelling studies 210–211, 212, 229
electrophysiological studies 209–210, 209
indirect effects 208
pharmacological studies 210, 210
preclinical studies 211–212
MRI environment challenges 58
MRI roles 59
characterization of effects 66–67
neuronavigation 63–65
target selection 61–62
regulation issues 218–219
response variation 67, 70
safety 207, 212–215, 229–230
skin damage 207, 229–230
sham methods 215–216
technical aspects 204–207, 227–229
electric current intensity 206–207
electrode set-up 204, 206, 219–220
parameters 206–207
session duration 207
session number and intervals 207
unidirectional current 227
waveforms 228
Index

technique comparisons 216
