Index

A
a priori method (as a way of knowing), 6, 8, 14
A-B design, 356
A-B-A design, 356
A-B-A-B design, 356–357
Alpha level (α), 119
Alternating treatments design, 362–365
Alternative hypothesis (H₁), 119–120
American Psychological Association (APA), 2, 32–33, 52, 123
Analysis of variance, see ANOVA
Anecdotal evidence, 19, 20, 77
Animal research, 47–53
animal rights issue, 48–50
antivivisection movement and, 48–49
APA code for animal research, 52–53
justification for, 52
ANOVA, 208, 223, 249–250
1-way ANOVA, 208
2-way ANOVA, 249–250
ANOVA source table, 208, 250
origins, 250
Anthrozoology, 51
Antivivisection movement, 48–49
APA ethics code for animal research, 52–53
caring for the animals, 52–53
cost-benefit analysis, 52
education purposes, 53
APA ethics code for research with humans, 35–47, 185, 269–270
APA Publication Manual, 379
APA, see American Psychological Association
APA-style lab report, 384–394
Application (as a goal of research), 22–23
Applied behavior analysis, 353–367, 354
alternating treatments design, 363–365
and ethics of control, 353–354
changing criterion design, 360–363
evaluation, 365–367
multiple baseline design, 357–360
withdrawal design, 356–357
Applied research, 61–63, 281, 314–319
Archival data, 304
Archival research, 303–309
Assent, 41
Association for Psychological Science (APS), 62, 309

 ATI (Aptitude-Treatment Interaction) designs, 243
Attrition (as threat to internal validity), 153–154, 175, 302
Authority (as a way of knowing), 5, 8
Availability heuristic, 7, 334

B
B = f(P, E), 246
Bar graph use, 203–204
Barnum effect, 20
Baseline (in single-subject designs), 355
Basic research, 61–63, 314
Behavior checklists, 296–297
Belief perseverance, 6
Belmont Report (ethics), 34
Bet (β), 223, 249–250
Bias in research, 177–184
experimenter bias, 177–180, 305
participant bias, 180–184
Biased sample, see Participant bias

C
Carryover (order) effect, 169, 265
case study designs, 367–372
evaluation, 371–372
Ceiling effect, 137, 225, 231, 321
Census data (in needs analysis), 334
Change scores, 320
Changing criterion design, 360–363
Clever Hans (and falsification), 76–77, 177
Closed (vs. open-ended) survey questions, 259–260, 271
Cluster sampling, 95–96
Coca-Cola applied psychology study, 318
Coefficient of correlation, see Pearson’s r
Coefficient of determination (r²), 276
Cognitive dissonance theory, 71–74, 294–295
Cohort effects, 175
Cohort sequential design, 175–176
Columbia bible (Woodworth), 130, 160, 256
Community forum, 334
Complete counterbalancing, 170

Concept learning (in children), 347–349
Conceptual replication, 82, 192, 201, 271, 309
Concurrent validity, 103
Confederate, see Experimenter confederate
Confidence interval, 124–125, 204
Confidentiality, 45, 47, 338–339
Confirmation bias, 6, 77–78
Confound, 134–136, 154, 181, 224, 236, 320
Consent form, see Informed consent
Construct, 71, 97–100
Construct validity, 103, 144
Contemplative (vs. technological) ideal, 353
Content analysis, 305
Content validity, 103
Continuity theory (concept learning), 348
Control group, 133–134, 209–215, 330
and ethics, 210–211
placebo control group, 183–184, 209–210, 212–213, 318
waiting list control group, 210, 212–213
yoked control group, 213–215
Convenience sample, 96
Convergent validity, 104
Converging operations, 68
Correlational research, 272–286
Correlations, 273–276
and coefficient of determination (r²), 276
and outliers, 277
and regression analysis, 277–280
and scatterplots, 273–275
Cost-benefit analysis (ethics), 35–37, 52
Cost-effectiveness analysis (in program evaluation), 337
Counterbalancing, 169–174, 180, 194, 239, 318, 319
complete, 170
partial, 170–171
Cover story, 196
Covert participant observation, 301–302
Creative thinking (in science), 84–86
Criterion validity, 103
Criterion variable (in regression analysis), 277, 280–281
Critical thinking, 3–4, 15, 259
Critical incidents technique (ethics), 33, 35
Cross-lagged panel correlation, 283–284
Cross-sectional study, 174–176, 301
Crosstalk, see Participant crosstalk
Cumulative recorder, 351–352
Index

Inter-rater reliability, 357, 360
Interrupted time series design, 327–328
Mediation variable, 328–329
hypothetical outcomes, 328–329
with a control group, 330
with multiple dependent variables, 331–332
with switching replications, 331
Interval scale (of measurement), 108–109
Intervention integrity, 360
Interview survey, 266–267
Introspection, 11
IRB, see Institutional Review Board

J
Joint Method (Mill), 131, 133
Journal articles (how to read), 89

K
Key informant, 334
Kinsey survey, 266

L
Laboratory (vs. field) research, 63–66
Laboratory observation studies, 293
Lab report, see APA-style lab report
Latin square (counterbalancing), 171
Laws, 22
Leading question, 256–257, 264
Likert scale, 261, 280
Line graph use, 203–205
Litvak Digest (biased survey), 258
Little Albert experiment, 31
Lloyd Morgan’s Canon, 77
Longitudinal study, 174–177, 283

M
Main effect (in factorial designs), 221–225
Manipulated (vs. subject) variables, 132,
137–138, 160
Manipulation check, 65, 99, 180, 183, 184
Margin of error, 117, 124n.
Matched groups design, 190, 193–194
Matching, 134, 163–166, 164, 194
and regression to the mean, 322–325
Matching variable, 164, 306
Maturation (as threat to internal validity), 150, 321
Maze learning research (and creativity), 84–86, 189–190
Mean, 111
Measurement error, 102, 118
Measurement scales, 105–109, 143–144, 206
interval scales, 108–109
nominal scales, 106–107
ordinal scales, 107–108
ratio scales, 109
Median, 111–112
Median location, 111
Mediating variable, 285–286, 316
Meta-analysis, 124, 308–310
Method of agreement (Mill), 131, 133
Method of concomitant variation (Mill), 131
Method of difference (Mill), 131, 133
Milgram obedience experiment, 33–34, 36,
40, 43, 45, 63–64
Mixed factorial design, 238, 239–241
Mixed P x E factorial, 239
MK-ULTRA (ethics), 39–40
Mode, 112
Moderating variable, 286
Mozart effect, 82, 201–202
Multiple baseline design, 279–281, 307
Multiple regression, 279
and factor analysis, 307–308
and multiple regression, 279–281, 307
Mundane (vs. experimental) realism, 63–64
Naturalistic observation, 293–294, 299–301
Needs analysis, 333–335
Negative correlation, 272–273
Nominal scale (of measurement), 106–107
Noncontinuity theory (in concept learning), 348
Nonequivalent control group designs,
320–327
hypothetical outcomes, 321–322
Nonlinear effect, 198–199, 202, 205
Nonprobability sampling, 96
Nonresponse bias, 267
Normal curve, 115
Null hypothesis (H0), 119
Null hypothesis significance testing (NHST), 118–122, 134, 206–208
Nuremberg code (ethics), 33

O
Objectivity, 10–11, 99
Observational research, 293–303
and control issues, 295–296
and ethics, 298–299
naturalistic observation, 293–294, 299–301
participant observation, 268–269, 294–295,
301–302
Observer bias, 296–297
Observers (Os), 36n., 236, 344
Online surveys, 268–269
Open-ended (vs. closed) survey questions,
259–260
Operant chamber, 351
Operant conditioning, 350–351, 353, 363
Operational definition, 67–68, 97, 99, 103,
136–137, 144, 193, 200, 300, 325, 327,
355, 360
Operationism, 67
Order effect, 169, 195
Ordinal scale (of measurement), 107–108
Outlier, 112, 139–140, 277

P
P x E factorial design, 238, 241–246
Paired samples t test, see Dependent samples t test
Paper (research presentation), 395
Parsimonious (explanation), 77–78, 347
Partial correlation, 285
Partial counterbalancing, 170–174
Participant, see Research participant
Participant bias, 180–184
Participant crossover, 44, 240
Participant observation, 294–295, 301–302
Participant pool, see Subject pool
Pearson’s r, 275–276
Peirce, Charles (and ways of knowing), 5–8
Phone surveying, 268
Phrenology (as pseudoscience), 16–21, 75
Pilot study, 65, 80, 212, 263, 336
Placebo, 209
Placebo control group, 183–184, 209–210,
212–213, 318
Plagiarism, 53, 383–384
Population, 94, 114, 117
Positive correlation, 272–273
Poster (research presentation), 395–396
Posttest, 149–152
Power, 125
Prayer, efficacy of, 13, 134
Prediction (as a goal of research), 22, 272,
277–280
Predictive validity, 103
Predictor variable (in regression analysis),
277, 280–281
Pretest, 149–152
Probability sampling, 94–96
Problem of designation (language bias), 382
Problem of evaluation (language bias), 382
Productivity (of theories), 74
Program audit, 335
Program evaluation, 149, 332–339
and social reform, 332–333
cost-effectiveness analysis, 337
ethics and, 338–339
formative evaluation, 335–336
needs analysis, 333–335
summative evaluation, 336–337
Programs of research, 79
Progressive (order) effect, 169
Protocols, 179
Pseudoscience, 15–21
association with true science, 17, 19
disproof criterion (falsification)
sidestepped, 20–21
oversimplification of concepts, 21
overuse of anecdotal evidence, 19–20
phenology disproven by Flourens, 18
Psi Chi, 378
Psychological assessment, 259
