Contents

List of Contributors, viii
Prelace, xii

Part 1 Introduction
1 Concept and Scope of Modern Vaccines, 3
   D. Huw Davies, Clint S. Schmidt, & Nadeem A. Sheikh

Part 2 Principles of Vaccine Design
2 Strategies to Stimulate Innate Immunity for Designing Effective Vaccine Adjuvants, 15
   Heather L. Wilson, Scott Napper, George K. Mutwiri, Sylvia van Drunen Littel-van den Hurk,
   Hugh Townsend, Lorne A. Babuik, Andrew A. Potter, & Volker Gerdts
3 Antigen Processing and Presentation by MHC Class I, II, and Nonclassical Molecules, 29
   Antony N. Antoniou, Izabela Lenart, David B. Guillane, & Simon J. Powis
4 Understanding the Mucosal Immune System for Better Mucosal Vaccine Design, 47
   Janine Bilsborough & Joanne L. Viney
5 Immunologic Memory: T Cells in Humans, 61
   Maria Candela Iglesias, Victor Appay, & Arnaud Moris
6 Immunologic Memory: B cells, 79
   F. Eun-Haung Lee & Iñaki Sanz
7 Utility of Mouse Models in Vaccine Design and Development, 94
   Catherine M. Bosio, Megan MacLeod, Philippa Marrack, & Ross M. Kedl
8 Utility of Nonhuman Primate Models for Vaccines, 110
   Preston A. Marx, Jr & Alexander F. Voedvin

Part 3 Antigen Discovery
9 Sequence-Based Computational Approaches to Vaccine Discovery and Design, 133
   Darrick Carter
10 Antigen Discovery for Vaccines Using High-throughput Proteomic Screening Technologies, 150
   D. Huw Davies
11 Phage Libraries, 168
   Aaron K. Sato
Part 4 Antigen Engineering

12 Attenuated Bacterial Vaccines, 181
   Richard W. Titball & Helen S. Atkins

13 Virus-like Particles as Antigen Scaffolds, 196
   Bryce Chackerian & John T. Schiller

14 Recombinant MVA vaccines: Optimization, Preclinical, and Product Development, 209
   Yper Hall & Miles W. Carroll

15 Recombinant Adenoviruses for Vaccination, 224
   Nelson Cesar Di Paolo, Dmitry Shayakhmetov, & André Lieber

16 Recombinant Avipoxviruses, 237
   Michael A. Skinner & Stephen M. Laidlaw

17 Intracellular Facultative Bacterial Vectors for Cancer Immunotherapy, 255
   Patrick Guirnalda, Laurence Wood, Matthew Seavey, & Yvonne Paterson

18 Nucleic Acid Vaccination, 275
   Britta Wahren & Margaret A. Liu

19 Artificial Antigen-presenting Cells: Large Multivalent Immunogens, 286
   Matthew F. Mescher & Julie M. Curtisnger

Part 5 Delivery Systems

20 Transcutaneous Immunization via Vaccine Patch Delivery System, 303
   Robert C. Seid, Jr & Gregory M. Glenn

21 Needle-free Jet Injection for Vaccine Administration, 324
   Brian R. Sloat, Hoi K. Tran, & Zhengrong Cui

22 Oral Vaccines: An Old Need and Some New Possibilities, 336
   Amit A. Lugade, Kalathil Suresh, & Yasmin Thanavala

23 Adjuvants: From Serendipity to Rational Discovery, 348
   Derek T. O’Hagan & Andreas Wack

24 Immunostimulatory Properties of Biodegradable Microparticles, 361
   Fiona A. Sharp & Ed C. Lavelle

25 Co-administration of Co-stimulatory Moieties, 375
   Carolina Arancibia-Cárdenas & Yvette Latchman

26 Toll Receptors in Relation to Adjuvant Effects, 393
   Dipshikha Chakravortty, Amit Lahiri, & Priyanka Das

Part 6 Regulatory Considerations

27 Regulatory Issues (FDA and EMA), 403
   Murrium Ahmad, Victoria Byers, & Peter Wilson
Contents

Part 7 Evaluating Vaccine Efficacy

28 Immune Monitoring Design within the Developmental Pipeline for an Immunotherapeutic or Preventive Vaccine, 419
   Sylvia Janetzki, Pedro Romero, Mario Roederer, Diane L. Bolton, & Camilla Jandus

29 Clinical Development Strategy: Nuts and Bolts, 441
   Candida Fratazzi & Claudio Carini

30 Current Approaches to Identify and Evaluate Cancer Biomarkers for Patient Stratification, 452
   Robert Rees, Stephanie Laversin, Cliff Murray, & Graham Ball

Part 8 Implementing Immunizations/Therapies

31 Mass Immunization Strategies, 467
   David L. Heymann, R. Bruce Aylward, & Rudolf H. Tangermann

32 The Role of Mathematical Models in Vaccine Development and Public Health Decision Making, 480
   Marie-Claude Boily, Marc Brisson, Benoit Masse, & Roy M. Anderson

33 Vaccine Safety, 509
   John Iskander, Claudia Vellozzi, Jane Gidudu, & Robert T. Chen

Index, 525
