Aspen Dynamics, 289, 326, 333
Aspen Plus, 289, 298, 321, 323
Aspentech membrane extension, 206
augmented price-driven method, 425
autonomous controllers, 389, 394
benzene chlorination process, 192, 193
biodiesel process, 4, 192, 193, 293, 468
bioethanol process, 192, 193
block relative gain (BRG), 80
bottleneck, 123, 126, 142, 172, 240, 245
branch and bound method, 56
brute-force optimization, see optimization
butane isomerization process, 192, 193
butyl acetate process, 192, 193
carbon capture process, 37, 192, 193
centralized control, see control
centrifugal separator, 345
classification, 181, 182, 187
cold shot cooling, 277
combinatorial optimization, see optimization
component material balances, 215, 307
constraint control, see control
constraints, 46, 62, 209, 212, 306
control
   active constraint, 122
   centralized, 187
   constraint, 349
   co-ordinated, 419, 421
decentralized, 187
distributed, 388, 392, 408, 418
fresh feed flow, 266
hierarchy, 234, 235
inventory, 161, 213, 326
model predictive (MPC), 339, 430
multiloop, 350
multivariable, 350
optimal, 142
PID, 5, 206, 233, 246, 259, 332, 375
regulatory, 5, 121, 125, 133, 232, 245, 346, 374, 379
self-optimizing, 46, 185, 186, 197, 239, 373
supervisory, 5, 128, 138, 232, 246, 370, 375, 379
total feed flow, 266
unit-level, 207
total feed flow, 266
total feed flow, 266
control degrees of freedom (CDOF), 21, 23, 24, 209, 304
control valve sizing, 467
controlled variables (CVs), 5, 46, 121, 212, 213, 231, 234, 306, 307, 337, 347, 349, 370, 443, 446
controller tuning, 13, 111, 209, 217, 289, 305, 308, 332, 357, 375, 422, 430, 467, 471
coordinated control, see control crystallization, 341
cumene process, 192, 193
cyclone separator, 344
decentralized control, see control decomposition
  horizontal, 187
  vertical, 187
degrees of freedom (DOFs), 21, 45, 62, 87, 234, 235, 370, 377
design trade-offs, 98
deviation from the production target (DPT), 257, 265, 269, 270, 315
dimethyl ether process, 192, 193
dissipativity, 389, 395
distributed control, see control disturbance
  propagation, 157, 183
  rejection, 14, 81, 143, 148, 175, 247, 399
  scenario, 14
dynamic disturbance sensitivity (DDS), 257, 263, 269, 270, 315
dynamic initialization, 468
dynamic input-output pairing matrix (DIOPM), 85, 90
dynamic model/modeling, 15, 45, 343, 364, 399, 430
dynamic relative gain array (DRGA), 78
dynamic simulation, see simulation
eco-efficiency, 445
economic operation, 123, 231
effective relative gain array (ERGA), 79
etherification process, 192, 193
ethyl acetate process, 321
ethyl benzene process, 192, 193
ethylene glycol plant, 453

exact local method, 51, 243
exergy, 445

fatty-acid methyl ester (FAME), 293
flowsheet-oriented method, 28, 35, 37
forced-circulation evaporator, 61, 433
fresh feed flow control, see control
fresh feed management, 102
fruit concentrate process, 192, 193
furnace off-gas system, 368, 377
gain matrix, 76, 79, 81, 460

Hankel interaction index array (HIIA), 85
heuristics, 13, 98, 116, 183, 206, 213, 294, 301
heuristics approach, see approach
H-infinity (H∞) norm, 398, 403
HYSYS, see Aspen HYSYS

industrial off-gas system, 192, 193, 362, 370
input-output stability, 395, 402
integrated framework, 184, 187, 197, 206, 294, 301
interaction analysis, 94, 388
interaction measure, 82
integrated gasification combined cycle plant, 192, 194
inventory, 33, 152
inventory control, see control

large-scale optimization, see optimization
leakage, 363, 371
local methods, 50
loop configuration, see pairing selection
Luyben's heuristic procedure, 184, 196

manipulators, see manipulated variables
mathematical approach, see approach
mathematical tools, 183
MATLAB, 132, 371, 375, 378, 433
measurement selection, 231, 241
measurement systems, 14
membrane separator, 204, 259
methanol process, 192, 194
methodologies (for PWC design), 15, 181, 182, 187, 195, 203
methoxy-methyl-heptane process, 192, 194
methyl acetate process, 192, 194
methyl amines process, 192, 194
minimum singular value (MSV), 50
mixed approach, see approach
mixed structure, see structure
model predictive control (MPC), see control
mono-isopropyl amine process, 192, 194
multiloop control, see control
multi-stage crystallizers, 341
multivariable control, see control
network approach, 389
Niederlinski index (NI), 77, 182
nonlinear relative gain array, 92
null space method, 53, 243
numerical errors, 469
optimal control, see control
optimal design, 323, 325
optimal operation, 3, 45, 234, 238, 347, 371, 377
optimization, 45, 49, 239, 348, 371, 378, 422, 423, 427
approach, see approach
brute-force, 48, 243
