### 1. Elements of Sustainability and Bioremediation 1

*Ackmez Mudhoo and Romeela Mohee*

The Sustainability, Remediation and Biotechnology Link 1
- Features and Concepts in Sustainability 2
- Sustainability and Scale of Environmental Pollution Clean-up 3
- Biotechnology and Bioremediation 4
- Environmental Pollution and Biotreatment Variants 5

### Main Features of Bioremediation 7

- Advantages of Bioremediation 7
- Disadvantages of Bioremediation 8
- General Approach to Bioremediation 9

#### In Situ Bioremediation Technologies 10

- Bioventing 10
- Biostimulation 11
- Air-sparging 12
- Natural Attenuation 13
- Landfarming 14
- Phytoremediation 15

#### Ex Situ Bioremediation 16

- Composting 16
- Controlled Solid Phase Biotreatment 20
- Slurry Phase Bioremediation 21

### Anaerobic Digestion Processes 21

- Principles of Anaerobic Digestion Processes 22
- Pollutant Remediation by Anaerobic Processes 23
2. Natural Attenuation

R. Ryan Dupont

The Natural Attenuation and Sustainability Link

Features and Concepts in Natural Attenuation

Site Assessment, Mass Assimilation and the Need for Active Remedies

Contaminant Transformation Under Natural Site Conditions

Monitoring for Natural Attenuation

Source Area Evaluation

Source Area and Plume Connection

Source Area Delineation and Source Mass Analysis

Source Area Mass Flux Analysis

Source Area Lifetime Estimates

Quantitative Analysis of Natural Attenuation Data

Plume Stability Determination

Thiessen Polygon Method

Contaminant Degradation Rate Estimates

Plume Response to Source Removal

Decision Making Regarding Source Area Treatment

Concluding Note

4. Biosurfactants: Synthesis, Properties and Applications in Environmental Bioremediation 137
   Ramkrishna Sen, Ackmez Mudhoo
   and Gunaseelan, D.
   Introduction 138
   Enzymatic Syntheses of Surfactants 138
      Enzymatic Synthesis of Monoglycerides 139
      Enzymatic Synthesis of Sugar Esters 140
      Enzymatic Synthesis of Fatty Amides 142
      Enzymatic Synthesis of Alkyl Glycosides 145
      Enzymatic Synthesis of Lysophospholipids 146
   Microbial Synthesis of Biosurfactants 148
      Surfactin 149
      Sophorolipids 150
      Rhamnolipids 151
5. Phytoremediation: An Efficient Approach for Bioremediation of Organic and Metallic Ions Pollutants

Divya Gupta, Lalit Kumar Singh, Ashish Deep Gupta and Vikash Babu

Introduction 213
Types of Phytotechnology 215
Phytoextraction 215
Rhizofiltration 217
Phytovolatilization 218
Phytodegradation/Phytotransformation 218
Phytostabilization 219

Strategies Used in Phytoremediation

of Inorganic Pollutant 219
Accumulation of Heavy Metals in Plants 219
Chelate Enhanced Phytoextraction and Translocation 222
Transport 223
Phytotransformation 223

Strategies Used in Phytoremediation

of Organic Pollutant 225
Direct Phytoremediation 225
Indirect Phytoremediation/Rhizoremediation 232
Concluding Note 236
References 236

6. Bioleaching 241
Leo G. Leduc and Garry D. Ferroni
Introduction 241
Mechanisms of Bioleaching 242
Strategies of Bioleaching 244
Microorganisms of Bioleaching 245
Factors Affecting Bioleaching 248
Temperature 249
pH 251
Nutrients 252
Toxic Substances 253
Environmental Considerations 255
Conclusions 256
Acknowledgements 256
References 257

7. Biosorption of Heavy Metals – New Perspectives 261
Teresa Tavares and Hugo Figueiredo
Biosorption of Heavy Metals – New Perspectives 262
Materials and Processes 263
Downstream Reuse: Biosorbents based Catalysis 270
A Particular Ion: Biosorption 272
of Hexavalent Chromium 272
The Role of Supports: Usage of Zeolites 274
for the Treatment of Cr\textsuperscript{VI} Solutions
Inside the Industrial Circuit: Cr as Catalyst 275
for Oxidation Reactions
References 279

and Suresh Gupta
Introduction 286
Abatement Techniques 287
Removal of VOCs from Waste Air 287
Removal of Heavy Metals from Wastewater 289
Biological Based Methods for the Removal of VOCs
and Heavy Metals 291
9. Modeling and Implementation of Sustainable Remediation Based on Bioventing

Hillel Rubin, Eran Rubin and Holger Schüttrumpf

Introduction 318
   Basic Features of Sustainable Remediation Based on Bioventing 321
Understanding the Environment Domain - Possible Difficulties in Using Bioventing 327
   The Difference Between Layouts of Bioventing and SVE Systems 327
Cases of Bioventing as a Byproduct of Air Sparging 328
Difficulties in Using Bioventing 329
Bioventing Implementation 330
   Theoretical Background 330
   Bioventing Degradation Implementation Model 334
Sustainable Bioventing Practice 338
   General Comments 338
Preliminary Information and Basic Know-How 339
Initial Evaluation of Bioventing Effectiveness 341
Detailed Evaluation of Bioventing Effectiveness 342
Pilot Studies 350
Evaluating the Design of Bioventing Systems 352
Evaluating the Operation and Monitoring Plans 361
Concluding Note 363
References 365

10. Bioremediation of Xenobiotics 367
Komal Saxena, Gajendra Kumar Aseri, Ashish Deep Gupta and Vikash Babu

Introduction 367
Types of Bioremediation 370
In-Situ Bioremediation 370
In situ Bioremediation Comprises of 370
Ex-Situ Bioremediation 372
Methods for the Bioremediation of Xenobiotic Compounds 372
Biosparging 372
Bioaugmentation 372
Phytoremediation 373
Biostimulations 373
Photosynthesis 373
Phytodegradation (Phytotransformation) 374
Biopiling 374
Composting 374
Bioreactors Used for the Bioremediation of Xenobiotic Compound 375
Slurry Bioreactors 375
Bioreactors Having Aerobic Condition 375
Coupled with Anaerobic Conditions 378
Two-Phase Partitioning Bioreactors (TPPBs) 379
Metabolic Pathways for Bioremediation of Xenobiotics 380
Aerobic Pathways 380
Anaerobic Pathways 384
Co-Metabolic Pathway 385
Bioremediation of Various Classes of Xenobiotic Compounds 386
Explosives 386
Biremediation of BTEX 388
Biremediation of Pesticides 389
Biremediation of Organochloro Pesticides 391
Biremediation of Weedicides and Herbicides 392
Biremediation of Dyes 393
The Decolorisation of the Dyes is Assayed by Beer- Lambert's Law 394
Biremediation of Waste Water Containing Synthetic Detergents 395
Biremediation of Tannery Waste Water 396
Concluding Note 397
