1 Foundation knowledge in forensic odontology 1
   Jules A. Kieser, Jane A. Taylor, Zaf Khouri and Maurice Churton
   Introduction 1
   A short history of forensic odontology 2
   Forensic odontology in Australia 5
   Forensic odontology in New Zealand 10
   Working as an odontologist 19
   References 20

2 Jurisprudence and forensic practice 23
   David L. Ranson
   Legal systems and the healthcare community 23
   Types of law 28
   The coronial system 32
   The investigators within the coroner’s jurisdiction 38
   Court procedures and the expert medical witness 41
      Long-term preparation 48
      Medium-term preparation 48
      Short-term preparation 49
      Logistics of appearing as a witness 49
      Refreshing memory 50
      Revision of medical knowledge 51
      Medico-legal analysis 52
      Pre-trial conference 52
      Entering the court 53
      Conversations outside the court 53
      Appearance and behaviour 54
   Report writing 57
   Reference 63
   Recommended reading 63
3 Anatomy and morphology 64
Mark Leedham and Erin F. Hutchinson

Dental anatomy and morphology 64
Morphogenetic fields 65
Additional teeth 66
Hypodontia 70
Shape anomalies 72
Peg lateral incisors 72
General head and neck anatomy 73
Temporomandibular joint (TMJ) 73
Infratemporal fossa 74
Pterygopalatine fossa 74
Mandibular nerve 75
Salivary glands 75
Oral cavity 76
Blood supply and lymphatic drainage of the orodental tissues 77
Osteology of the juvenile and adult craniofacial complex 77
Neurocranium 77
Frontal bone 80
Parietal bone 84
Occipital bone 86
Temporal bone 95
Sphenoid bone 103
Viscerocranium 110
Zygomatic bone 110
Lacrimal bone 113
Ethmoid bone 114
Inferior nasal concha 116
Vomer bone 117
Nasal bone 119
Maxilla 125
Palatine 126
Mandible 126

4 Forensic pathology 134
David L. Ranson and Norman Firth

The role of the forensic pathologist 134
The medico-legal autopsy 135
Post-mortem changes in the deceased 139
Decomposition 140
5 Human identification

Stephen Knott

Human identification

We have the right to our name when we die

Methods of identification

Human dentition

Teeth: the last tissue to disintegrate

Role of the primary identifiers

Visual

Fingerprints

DNA

Medical and anthropological

Ante-mortem dental data

Dental records or dental data?

Dental prostheses

Oral implants

Orthodontics

Radiographic images: facial sinuses and anatomical features within the bone

Superimposition

Facial reconstruction

Standards for acceptance of identification

References
6 Mortuary techniques

Alain G. Middleton

The dental post-mortem

What is the purpose of the dental post-mortem? 185

Components of a dental post-mortem

Location 186
Facilities 186

Equipment – basic requirements

Ventilation 186
Lighting 187
Examination table 187
Oral health and safety – personal protection 187
Head hair 187
Face 187
Hands 188
Body covering 188
Footwear 188

‘Tools of the trade’

Photography 189
Capture device (camera and lens/es) and media 189
Producing and processing images 189
Organising images 190
Using images 190
Backup 190
Archiving 190
Depth of field 191
Fragments and single teeth 191

Radiographic equipment 192
CT scanning equipment 192
Teeth for DNA analysis 192

The ‘what and how’

Organisation 193
Permissions 193
Examination and recording of the findings 195
The investigative examination 196
The identification examination 196
Detail 196
Written observations and charting 197

Recording of the findings 197
Stress 197
Legibility 197
Language 197
Errors 198
Abbreviations 198
Transcription 198
Charting 198
Clinical notes 198
Radiographic 199
Tissue thicknesses 199
Fragments and single teeth 199
Radiation safety 199
Photographic 199
Impressions 200
Age estimation 200
Condition of the remains 200
Complete body or a partial set of remains? 200
Incomplete and/or fragmented? 201
Are all the teeth and bone sections present? 201
Skeletal remains 201
Incinerated remains 201
Decomposed remains 202
Mummification 203
Immersion 203
Procedure – putting it all together 203
Initial examination 203
Photographic and radiographic examination 204
Access and reflection 204
Intact skulls and mandible 204
Fragmented skulls and mandible 205
Reflection technique 205
Floor of the mouth and tongue 205
Access the maxilla and the oral cavity 206
Resection 206
Bite mark and other pattern recording 206
Reporting recording of results 207
Reports 207
Summary 208
Reference 208

7 Age assessment 209
Richard Bassed, Jeremy Graham and Jane A. Taylor

Introduction 209
Some history of age assessment 211
A brief review of dental development 212
Developments in dental-age assessment 214
Current age-estimation methods 215
8 Bite marks

Alex Forrest and Alistair Soon

Introduction 228

Describing bite marks 229

Bite marks are physical evidence 229
Class characteristics 230
Individual characteristics 230
Anatomical locations of bite marks 231
Types of bite marks 231
Not everything is a bite mark 234
Conclusions based on the description of the injury 234

The process of biting and how it relates to bite marks 235

The individuality of the dentition and its transfer to the bite mark 236

The individuality of the human dentition 236
Accuracy of transfer of dental features to bitten tissues 237

Imaging in bite mark cases 238
Avoiding distortions due to perspective 239
Avoiding distortions due to parallax 241
Photographic lighting 241
File format for image files 245
Using alternative light sources 245
Imaging the dental casts for comparison 245
A note on the use of the ABFO No 2 bite mark scale 248

Undertaking the case 249
Case selection 250
The clinical appointments 250
Bite mark analysis 257
Bite mark comparison 266

Presenting bite mark evidence in court 273

Sources of potential distortion and error in bite mark cases 275

Distortions due to tissue properties and movement of a bitten body part 275
Distortions due to evidence collection 276
Distortions due to poor imaging 276
Potentially controllable variables 277
Potentially uncontrollable variables 277

Limitations of bite mark analysis and reporting the outcomes of bite mark comparisons 277
Can we determine the age of the biter from the injury arch dimensions? 279
Can we visually age bite marks? 280
Swabbing for DNA 280
Materials required 281
Method 281
Conclusion 281
Future directions 282
References 283

### 10 Forensic anthropology

*Denise Donlon, Russell Lain and Jane A. Taylor*

- The scope of forensic anthropology                                      | 336  |
- Assessment of ancestry                                                  | 336  |
  - Importance of assessment of ancestry                                   | 337  |
  - Approaches                                                             | 337  |
  - Tooth size and non-metric traits                                       | 338  |
- Assessment of sex                                                       | 339  |
  - Approaches                                                             | 339  |
- Sexual dimorphism in the dentition                                      | 342  |
  - Sexual dimorphism in juveniles                                         | 342  |
- Assessment of age                                                        | 343  |
  - Methods of ageing juvenile and young adults (<30 years)                | 343  |
  - Ageing of middle-aged to older adults (>30 years)                      | 343  |
- Comparative anatomy                                                      | 344  |
- Historical remains                                                       | 347  |
- Conclusion                                                              | 351  |
- References                                                              | 351  |

### 11 Applied forensic sciences

*David C. Kieser, Terry Lyn Eberhardt, Gemma Dickson and J. Neil Waddell*

- Introduction                                                            | 355  |
- Crime scene protocols                                                    | 356  |
- Forensic entomology                                                      | 358  |
- Forensic microbial aquatic taphonomy                                     | 363  |
The use of energy-dispersive spectroscopy in forensic investigations 369
References 375

12 Odontology opinions 377
Denice Higgins and Helen James

Introduction 377
General principles 377
Types of opinions 379
  Identification of dental structures 379
  Injuries sustained to the teeth or other oral structures 383
  Injuries caused by teeth 386
  Child abuse 390
  Anatomical/morphometric comparisons 391
  Age estimation 393
  Tooth selection and sampling for DNA 394
  Oral pathology 396
  Dental malpractice 396
Report writing 399
