Contents

Preface to the Fourth Edition, vi

Chapter 1  History, 1
Chapter 2  The Blood Supply, 13
Chapter 3  Recruitment of Blood Donors, 28
Chapter 4  Blood Donor Medical Assessment and Blood Collection, 41
Chapter 5  Preparation, Storage, and Characteristics of Blood Components and Plasma Derivatives, 67
Chapter 6  Patient Blood Management, 100
Chapter 7  Production of Components by Apheresis, 122
Chapter 8  Laboratory Testing of Donated Blood, 149
Chapter 9  Blood Groups, 173
Chapter 10 Laboratory Detection of Blood Groups and Provision of Red Cells, 210
Chapter 11 Clinical Uses of Blood Components, 242
Chapter 12 Transfusion Therapy in Specific Clinical Situations, 304
Chapter 13 Techniques of Blood Transfusion, 360
Chapter 14 Complications of Transfusion, 377
Chapter 15 Transfusion-Transmitted Diseases, 412
Chapter 16 The HLA System in Transfusion Medicine and Transplantation, 446
Chapter 17 Hematopoietic Growth Factors in Transfusion Medicine, 474
Chapter 18 Cellular Engineering for the Production of New Blood Components, 492
Chapter 19 Therapeutic Apheresis, 521
Chapter 20 Quality Programs in Blood Banking and Transfusion Medicine, 560

Index, 578
