Aanderaa RCM 11, 141
Absolute dynamic topography, 8
Tyrrenian Sea surface circulation and, 64
   monthly mean for, February, May, August, October, 66
AC. See Algerian Current
ADCP time series, zooplankton migration and, 141
Adriatic Deep Water, 114, 139
Adriatic-Ionian Bimodal Oscillation System, 126
Adriatic Sea, 75, 77, 86, 107, 114, 134. See also North Adriatic
   Sea; South Adriatic Sea
   average pre-EMT outflow of, 76
   Bora wind in, 139, 149
   computing lateral net salt and heat fluxes for, 132
   datasets referring to, 115–116
   deep-water mass formation in, 85
   DWF and role of lateral advection in, 131
   as main source of EMDW, 86
   physiographic structure of, 113
   potential temperature, salinity, and density at various depth
   layers, 96
   temperature oscillations in, 90
   temporal evolution, 1960–2000, of air temperature, sea
   surface temperature, evaporative fluxes, and total heat
   fluxes over, 127
   temporal evolution, 1960–2000, of air temperature, wind
   intensity, and precipitation over, 125
   temporal evolution, 1960–2000, of net volume of water
   exchanged at different density values through Otranto
   Strait, 118, 119
   time series of average potential temperature, salinity,
   potential density, and log(N) binned at half-year
   intervals in, 89
   trends in water properties at selected depth intervals in,
   1948–2010, 109t
   ADT. See Absolute dynamic topography
   Advection, lateral, role in circulation patterns of eastern
   Mediterranean Sea, 129–132
   ADW. See Adriatic Deep Water
   Aegean Basin, 102, 115
   Aegean Sea, 75, 107, 108, 134, 138. See also North Aegean
   Sea; South Aegean Sea
   air temperature, surface heat fluxes, and NCP dipole
   pattern in, 110
   behavior of subdomains within, 98–102
   Dardanelles Strait parameterization and, 117
   deep-water mass formation in, 85
   DWF and role of lateral advection in, 131
   DWF mechanisms involved in, 118
   evolution of hydrological characteristics in, 121
   histogram of dense-water outflow rates from, 76
   history of dense-water release from, 75–76
   islands, islets, depressions, and sills within, 98
   lateral net salt and heat fluxes for, computing, 132
   as new source of EMDW, 86
   outflow of dense water from, into Ionian Sea during
   EMT, 96
   physiographic structure of, 113
   potential temperature, salinity, and density at various depth
   layers, 95
   production of very dense waters in, 113–114
   salinity lateral redistribution in, 126
   temperature oscillations in, 90, 91–92
   temporal evolution, 1960–2000, of air temperature, sea
   surface temperature, evaporative fluxes, and total heat
   fluxes over, 127
   temporal evolution, 1960–2000, of air temperature, wind
   intensity, and precipitation over, 125
   temporal evolution, 1960–2000, of net volume of water
   exchanged at different density values through Cretan
   Arc Straits, 118, 119
   time series of average potential temperature, salinity,
   potential density, and log(N) binned at half-year
   intervals in, 89
   trends in water properties at selected depth intervals in,
   1948–2010, 109t
   Aegean Straits, 94
   Air-sea heat fluxes
   calculation of, ECMWF data and, 141, 143
   intense DWF in Aegean and, 133
   AIS. See Atlantic Ionian Stream
   Alborán Basin, 13
   altimetry-based mean circulation in, 8–9
   altimetry EKE time series for, 12
   eddy kinetic energy in, 10
   NM8 EKE time series for, 14
   surface circulation variability using EOFs for, 11
   Alborán Sea
   first EOF for, with amplitude and pattern; altimetry ADT,
   NM8 SSH, 15
   second EOF for, with amplitude and pattern; altimetry
   ADT, NM8 SSH, 16
Algerian Basin
- altimetry EKE time series for, 12
- eddy kinetic energy in, 10
- first EOF for, with amplitude and pattern; altimetry ADT, NM8 SSH, 17
- NM8 EKE time series for, 14
- second EOF for, with amplitude and pattern; altimetry ADT, NM8 SSH, 16
- surface circulation variability using EOFs, 11–12

Algerian Current, 8, 9, 13
Almería-Orán Front, 8, 9
Altimetric measurements, limitations with, 21
Altimetry ADT
- first EOF for Alborán Sea, 1993–2007, 15
- first EOF for Algerian Basin, 1993–2007, 17
- first EOF for NWMED, 1993–2007, 19
- second EOF for Alborán Sea, 1993–2007, 16
- second EOF for Algerian Basin, 1993–2007, 18
- second EOF for NWMED, 1993–2007, 20

Altimetry EKE time series, for Alborán Basin, Algerian Basin, and North Balearic Sea, 12

AMC. See Asia Minor Current
Anticyclonic eddies, 149, 150, 152, 153
Antikithira Strait, 105, 106, 113
bathymetry of EMed, 78
dense waters exiting at, 77
ARGO floats data, 87
ARPEGE-Climate model, 5, 116
ARPERA dataset, 116, 121
Asia Minor Current, 86
Athos Basin, 98
Atlantic Ionian Stream, 126, 130, 134

Atlantic layer (AL)
- difference MITgcm-POM for time-averaged thickness of, 36
- POM and MITgcm simulation of SoG circulation and, 31, 33
- time-averaged thickness, as simulated by MITgcm numerical model, 35
- time evolution of transport at Espartel, Camarinal Sill, Tarifa, and Gibraltar sections, 38
- water transport and thickness computation for, 34
- transports of, 70–72
- zonal vertical circulation in, 85

Atmospheric forcing, 134
- air-sea heat fluxes, DWI in Aegean and, 133
- Cretan Deep Water and role of, 121
- derived from ARPERA dataset, 116
- thermohaline variability in Southern Adriatic between, 34
- triggering of DWF in eastern Mediterranean and, 121–124, 126

AVISO dataset, for Tyrhenian Sea surface circulation, 64, 66–67
AW. See Atlantic water

AW pathway
- horizontal distribution of salinity minimum in upper 250m during preconditioning and decay phase of EMT event, 128
- during preconditioning and decay phase of 1970s event, 129
- salinity lateral redistribution and evolution of, 126

Balearic Current, 9
Balearic Sea, 12
Bari-Dubrovnik section
E2M3A site and, 141, 149
vertical distribution of potential temperature, salinity, density, and dissolved oxygen acquired along, 2007–2008, 150

Baroclinic tides, reproduced in POM and MITgcm models, 31
Baroclinic velocities, internal bore evolution, POM and MITgcm and calculation of, 31
Barotropic tides, reproduced in POM and MITgcm models, 30–31
BETACF, 89
BETA1, 89
BiOS. See Adriatic-Ionian Bimodal Oscillation System
Black Sea Water, 86, 99
Bonifacio cyclone-anticyclone system
Tyrrhenian Sea

internal bore evolution, 31
Physical Oceanography of the Eastern Mediterranean (POEM) program, 1, 85, 86, 87, 121
POEM-Biology and Chemistry (POEM-BC), 1

POM (α-coordinate hydrostatic model)
baroclinic horizontal velocity simulated by, during arrival of internal waves train at TN, 34
bathymetry in Strait of Gibraltar represented in, 26
eastern Mediterranean circulation studies, 116
Espartel, Camarinal, and Tarifa Narrows cross sections, 37
evolution of horizontal velocity field along longitudinal Section E during arrival of internal wave train to TN, 40, 41
exchange flow through Strait of Gibraltar simulated by description of, 27–28
discussion and conclusion, 46, 48–49
hydraulics, 36–41
internal bore evolution, 31
sensitivity experiments, 42
three-layer definition and properties, 31, 33–36
validation of, 30–31
frequency of occurrence, over tropical month period, of supercritical flow with respect to, 39, 39–41

MITgcm compared with, for time-averaged Atlantic, interface, and Mediterranean layer thickness, and depth of midpoint of interface layer, 36
nesting, tidal amplitudes and phases of barotropic currents simulated by, 30

POM and MITgcm simulation of SoG circulation and, 31
relaxation schemes, eastern Mediterranean circulation studies, 117
temporal evolution, 1960–2000, of temperature and, for South Adriatic and South Aegean Seas, 121, 123
temporal evolution of, at South Aegean Sea and South Adriatic Pit, 122
temporal evolution of temperature and, at different densities, 1960–2000, for South Adriatic and South Aegean Seas, 123–124
thermohaline variability in Southern Adriatic between 2006–2010 and, 143–144, 146
time series of in situ recorded by CT and CTD sensors installed at E2M3A, 145
uniform increase in Aegean Sea, at deep layers of, 92–93
vertical distribution of, of and for South Adriatic and South Aegean Seas, 123–124

POEM (α-coordinate hydrostatic model)

POM (α-coordinate hydrostatic model)
baroclinic horizontal velocity simulated by, during arrival of internal waves train at TN, 34
bathymetry in Strait of Gibraltar represented in, 26
eastern Mediterranean circulation studies, 116
Espartel, Camarinal, and Tarifa Narrows cross sections, 37
evolution of horizontal velocity field along longitudinal Section E during arrival of internal wave train to TN, 40, 41
exchange flow through Strait of Gibraltar simulated by description of, 27–28
discussion and conclusion, 46, 48–49
hydraulics, 36–41
internal bore evolution, 31
sensitivity experiments, 42
three-layer definition and properties, 31, 33–36
validation of, 30–31
frequency of occurrence, over tropical month period, of supercritical flow with respect to, 39, 39–41
horizontal grid used in, 29
MITgcm compared with, for time-averaged Atlantic, interface, and Mediterranean layer thickness, and depth of midpoint of interface layer, 36
nesting, tidal amplitudes and phases of barotropic currents simulated by, 30

time evolution of isohalines and velocity currents simulated by, during one tidal cycle, 32
time-evolution of isohalines and velocity currents simulated by, with horizontal diffusivity set to zero (EXP3), 45
time-evolution of isohalines and velocity currents simulated by, with increased number of iterations for Smolarzkevicz advection scheme (EXP2), 44
time-evolution of isohalines and velocity currents simulated by, with vertical diffusivity set to zero (EXP1), 43

TYREM based on, 60
vertical current simulated by, during arrival of internal waves train at TN, 34

PRIMI, 60
Princeton Ocean Model. See POM

Rhodes Gyre, 85
River discharge data, for major Mediterranean rivers, 116–117

Salinity
 Adriatic Sea, interannual to decadal oscillations in, 93–94
 in Aegean Sea waters, 75
 Cretan Basin, interdecadal oscillations in, 99
 CTD dataset and measurement of, 141
 in deep layers of Aegean Sea, uniform increase of, 92–93
 density in Levantine Sea and peaks of, 91
 differences in potential temperature and, 2010 minus 2008 for stations across southern western Mediterranean Sea, 55
 Eastern Mediterranean impact and, 76–77, 77
 evolution of western Mediterranean deep waters and, 52–53
 increase in Mediterranean Sea, 2
 Levantine series and observations of, 78–79
 profiles of
 below 500 dbar at station M9 for 2006, 2008, and 2010 surveys, 54
 POM and MITgcm simulation of SoG circulation and, 31
 relaxation schemes, eastern Mediterranean circulation studies, 117
 temporal evolution, 1960–2000, of temperature and, for South Adriatic and South Aegean Seas, 121, 123
 temporal evolution of, at South Aegean Sea and South Adriatic Pit, 122
 temporal evolution of temperature and, at different densities, 1960–2000, for South Adriatic and South Aegean Seas, 123–124
 thermohaline variability in Southern Adriatic between 2006–2010 and, 143–144, 146
 time series of in situ recorded by CT and CTD sensors installed at E2M3A, 145
 uniform increase in Aegean Sea, at deep layers of, 92–93
 vertical distribution of, of and for South Adriatic and South Aegean Seas, 123–124

Satellite altimetry and NM8 dataset comparison, WMED data, 6–8
methods
eddy kinetic energy, 8
empirical orthogonal functions, 8
