INDEX

ABO blood groups, 36, 55, 56, 70
Abortion, 789–790
Absolute risk, 426, 427
Accelerometry, 346–349
limitations of, 348
Acceptable macronutrient distribution ranges (AMDRs), 277
Acclimatization, 10, 184, 286
by acutely exposed sea-level natives, 224–227
to cold, 186–187, 190–191
to heat, 201, 203
Active cold defense, 179, 180–184
Activities of daily living (ADLs), 666–668
Activity, estimating, 352
Activity diaries, 349–350
Activity energy expenditure (AEE), 335
Activity levels, in subsistence populations, 366
Activity patterns
sex differences in, 366–367
variation in, 280–283
Actuarial life tables, 700–701
Acute energy deficiency, 367–368
Acutely exposed sea-level natives, oxygen transport and acclimatization by, 224–227
Acute mountain sickness (AMS), 222
Acute stressors, 483
Adaptability. See Human adaptability (HA)
Adaptation, 7–8. See also Cold adaptation;
Human adaptation
among contemporary human populations, 356–367
to the environment, 31, 177–250
to environmental stressors,
356–360
evaluating, 484
to lifestyle, 459
to lifestyle-related stressors, 485
modes of, 8
to pathogens, 403–407
types of, 10–11
Additive genetic correlation, 149
Additive genetic covariance, 149
negative, 166
Additive genetic variance, 145, 151
Adenine, 58, 60
Adenosine triphosphate (ATP), 85, 331
Adequate intake (AI), 255
Adiposity rebound, 540
Admixture model, 223, 224, 228
Adolescence
benefits of, 560, 563
evolution of, 558–560, 563–571
female, 560–561
male, 561–563
Adolescent behavioral problems, cortisol levels and, 495
Adolescent growth, 27, 28
nutrition and disease in, 617–619
sex differences in, 590
Adolescent growth spurt, 338, 543–544, 559, 561, 562, 590
Adolescent reproduction, 774
Adolescents
energy requirements for, 259
life cycle trade-offs/risks for, 575
protein requirements for, 262–264
Adolescent stage, 541–544
Adrenal androgens, 540
Adrenal gland, 540, 659
tumors of, 767
Adrenarche, 540
Adrenocorticotropic hormone (ACTH), 292, 473, 475
Adulthood stage, 544–545
Adult mortality, 717–718
  prehistoric, 720–721
Adult-onset diabetes mellitus, 293. See also
  Non-insulin dependent diabetes mellitus; Type 2 (adult-onset) diabetes
Aerobic capacity, 203, 662
Aerobic exercise, 282, 775
Aerobic respiration, 331
Affective response, to stressors, 471
Affective state, assessing, 471
Afghanistan, EBV titer study in, 501
African-American gene pool, 109–110
African-Americans, hypertension in, 290–293
African ancestry individuals, sensitivity to cold injury, 187–188
African populations, lactase persistence in, 287–288
Age, female fecundity and, 768–774
Age distribution, 411, 707
Age-related immune system alterations, 660–661
Age-standardization, 422–423, 425
Ageing, 637–692
  body composition and, 662–665
cold resistance and, 179
  heat illness/death and, 200
hormonal, 659
male reproductive, 672
questions related to, 637
Aging-related demographic models, 648–650
Aging stage, 545
Agricultural revolution, life expectancy and, 711
Agriculture, adoption of, 764–765
Air displacement plethysmography, 295
Allele frequencies, 100–101, 223
  analysis of, 100
  changes in, 9
  estimating, 107
  generational change in, 107
  migration and, 108–109
Allele frequency deviations, genetic drift and, 167
Alleles, 7, 55
codominant, 144
  equilibrium frequency of, 105
  for lactase persistence, 287
  identical-by-descent, 652
Allele sharing, 149
Allen’s rule, 196
Allometric analyses, 156
Allometric relationships, 267, 643
  between brain size and BMR, 270
Allopatric medicine, 18
Allostatic load, 464, 465, 489
Allostatic load, 464, 465, 496, 640, 667, 668
α-amylase, salivary, 472, 480–481
Alternative splice sites, 74
Alu sequences, 84, 89
Alveoli, 222
Alzheimer’s disease, 669–670, 794
Ambulatory blood pressure, 472, 477–480
  studies of, 496–499
Amenorrhea, 339, 766
  postpartum, 780
American Association of Physical Anthropologists, 28
American College of Sports Medicine (ACSM) exercise guidelines, 282
American diet, animal food consumption in, 276
American Heart Association (AHA)
  exercise guidelines, 282
American human biology, major divisions of, 25–44
American Journal of Human Biology, 4, 17
American Journal of Physical Anthropology, 28
Americas. See also Native American entries;
  South America; United States colonization of, 127
gene geography in, 122–126
modern populations of, 132
molecular diversity in, 124–126
mtDNA diversity in, 130
mtDNA haplogroups in, 124–125
Amerindian origins, 126–127. See also
Native American populations
Amino acid requirements, 264–265
Amino acids, 65, 254
use in building proteins, 68
Amino acid scores, 263, 264
AMY1 gene, 289–290
Amylase. See α-amylase; Salivary alpha-
amylase; Salivary amylase
Amyloid protein. See β-amyloid protein
Analytical studies, 409
Anasazi populations, 130–131
Ancestral Asian populations, migration
routes of, 128
Ancestry informative markers (AIMs),
109
Ancient DNA (aDNA), 132. See also
Deoxyribonucleic acid (DNA)
analysis of, 127–132
degradation of, 129
research on, 127–129
studies of, 127
Androgens, 537, 590–592, 660, 714. See also
Adrenal androgens
Angiotensin-converting enzyme (ACE),
227
Animal food contributions, variation in,
276
Animal foods, daily energy intake from,
278
Annals of Human Biology, 4, 17
Anorexia, 222
Anovulatory menstrual cycles, 559
Antagonistic pleiotropy, 640, 652
Anthropological genetics, 35–39
contemporary trends in, 38–39
Anthropology
energetics and, 326–328
epidemiology and, 391–394
Anthropometric measures/measurements,
40, 143, 162, 296, 354, 518, 588, 731
Anthropometric Standardization Reference
Manual, 354
Antibodies
passage to fetus, 611
production of, 660
steroid measurement and, 770
Antibody response, 335, 480
Anticodons, 69
Antigenic shift, 388
Antigens, 36, 480, 770
allele frequency data from, 122
Antioxidants, 656
Antisense DNA strand, 67. See also
Deoxyribonucleic acid (DNA)
Antitrypsin factor (ATF), 284
APOE*4 allele, 119
Apolipoprotein E, 670
Apoptosis, 90, 657
Appraisal, 462, 469
Arctic populations, genetic diversity in,
131–132
Arctic-to-tropic clinal variation, 194
Arterial hemoglobin measurement, percent
oxygen saturation of, 225
Arterioles, 180, 676
ASPM gene, 94–95
Atherosclerosis, 526, 662, 675
Atherosclerotic changes, 368
Atresia, 660
Attributable risk, 426, 429, 430
Australopithecines, brain size evolution of,
273
Australopithecus afarensis, 565
Australopithecus africanus, 566
Autoimmune diseases, 217, 334, 661
Autosomes, 87
Auxological epidemiology, 42
“Average heritability,” 162–163
Avian flu, 389
Background risk, 429, 430
Bacteria, 72, 401
Bacterial strains, 391
Baker, Paul T., 33, 41
Balancing selection, 104–105
Basal metabolic rate (BMR), 185, 226, 257,
258, 261, 325, 522, 655. See also BMR
entries
body size and, 266–268
differences in, 265
elevated, 357–358
in the energy budget, 333
measuring, 341
population variation in, 356–357
during pregnancy, 609
relationship to brain size,
270–272
systolic blood pressure and, 359
Base pairs, 519
Bases. See also Adenine; Complementary bases; Cytosine; Guanine; Nucleotide entries; Thymine; Uracil in the DNA molecule, 9
nitrogenous, 58, 331
polymorphic, 161
sequence of, 124
Basic reproductive number, 441
Behavioral adaptations, 11. See also Cultural adaptations
to cold, 196–198
to heat, 203–204
to seasonal energy stress, 359
Behavioral observation, 349–350
Behavioral responses to stress, 470
Behavioral Risk Factor Surveillance Survey (BRFSS), 303

Uncontested migration, 741
Underground storage organs (USOs), 290
Undernutrition, 202, 294, 338, 367–368, 527, 592, 597
childhood, 731
effects of, 626, 733–734
fetal, 675
growth and, 615
prenatal, 10–11
small body size and, 622
Underwater weighing, 295
United Nations Educational, Scientific, and Cultural Organization (UNESCO), 34–35
United States. See also American entries; National entries
human biology history in, 23–50
infectious disease mortality in, 733
milk consumption in, 288
obesity rates in, 294–295, 297, 299, 301–303
population growth in, 764
protein consumption in, 277
tuberculosis prevalence patterns in, 437
Unlinked loci, 57
Unsaturated fatty acids, 253
Uracil, 58, 60, 64
“Urban graveyard” hypothesis, 739–740
Urinary catecholamine excretion, effects of lifestyle on, 490
Urinary catecholamine studies, 489–493
UVA, 207, 214, 216. See also Ultraviolet radiation (UVR)
UVB, 205–208. See also Ultraviolet radiation (UVR)
UVMED (minimal erythemal dose), 211
UV exposure, 210, 211. See also Ultraviolet radiation (UVR)
folate degradation and, 214
Variable number tandem repeats (VNTRs), 82, 83, 84
Vascular dementia, 669
Vasoregulation, 180–181, 186, 196, 292, 334, 676
Vasodilation, 179, 200, 334
Vectors, 403, 725
Vegetarian diets, protein derived from, 264
Vehicles, 403
Ventilation studies, 227–228
Vertical transmission, 403
Viability selection, 103
Viral genome, 389
Virologists, 388
Virulence, 727
Viruses, 58, 401
Visceral adipose tissue (VAT), 369
Vital capacity (VC), 228–229, 231
Vital statistics, 407
on morbidity, 406
Vitamin D
deficiency in, 215–221
function of, 216
photosynthesis of, 215, 216
Vitamin D receptor (VDR), 215
Vitamins, 254
Voluntary migration, 743, 744
Walking, importance of, 303. See also Bipedalism
Washburn, Sherwood, 30
Wasted children, 367, 613
Water, requirements for, 255
Watts, Elizabeth, 42
“Wear and tear” theory, 651
Weight
heritability of, 304
socioeconomic status and, 595–596
Weight-for-height z-scores, 604, 612, 613–615
Weight gain, genetic differences in, 304–305
Weight loss, ovarian function and, 775–776, 777
Weiner, Joseph S., 31–33
Well-being, 23
Westernization, health changes associated with, 371
Westernized life, stresses of, 486–487
Western Samoa, EBV antibody study in, 500–501
WHO Commission on Social Determinants of Health, 390. See also World Health Organization (WHO)
WHO energy requirement recommendations, 257–258
WHO Global Infobase, 298
WHO growth charts, 605–606
WHO height standards, 617
WHO protein quality measure, 265
Winter mortality, 190
Women, life cycle trade-offs/risks for postmenopausal, 575–576
Workload, ovarian function and, 776–778
World Health Organization (WHO), 255–265, 407. See also WHO entries
World population growth, 761
Wright–Fisher reproduction model, 117
Wright, Sewall, 35, 36, 105–106, 107
  shifting balance theory of, 167–168

X2a haplogroup, 125
X chromosome, 87–88
XDR-TB (extensively drug-resistant tuberculosis) epidemics, 387, 431, 432, 433, 436–437
  epidemiological statistics related to, 434–435

X-specific region, 87
XY females, 592

Yakut subsistence economy, 362–363
Y chromosome, 87–88, 590–592
  molecular variation on, 121
Y-chromosome molecular markers, 121, 125
Y-specific region, 87–88

Zoonoses, 725, 792
z-scores, 270, 604, 612–613
