## CONTENTS

### FOREWORD
Michele Calos vii

### PREFACE
ix

### CONTRIBUTORS
xi

### PART I: CLONING AND GENE DELIVERY
1. DNA Assembly Technologies Based on Homologous Recombination 3
   *Bilbyana Tsvetanova, Lansha Peng, Xiquan Liang, Ke Li, Jian-Ping Yang, Tony Ho, Josh Shirley, Liewei Xu, Jason Potter, Wieslaw Kudlicki, Todd Peterson, and Federico Katzen*

2. Multigene Assembly for Construction of Synthetic Operons: Creation and Delivery of an Optimized All-IN-One Expression Construct for Generating Mouse iPS Cells 19
   *Takefumi Sone, Yoko Takata, Hiroe Kishine, Taichi Andoh, Fumio Imamoto, and Jonathan D. Chesnut*

3. Strategies for the Delivery of Naked DNA 37
   *Jennifer C. Moore and Ronald P. Hart*

### PART II: NONINTEGRATING TECHNOLOGIES
4. Episomal Vectors 51
   *Junying Yu*

5. Nonintegrating DNA Virus 85
   *Chris Kemp and David Kuninger*

6. Nonintegrating RNA Viruses 103
   *Noemi Fusaki*

7. Protein Delivery 119
   *Xiao-Jian Han and Kazuhito Tomizawa*
PART III: INTEGRATING TECHNOLOGIES 135

8. *Sleeping Beauty* Transposon-Mediated Stable Gene Delivery 137
   Andrew Wilber, Xianzheng Zhou, Xin Huang, Dan S. Kaufman, and R. Scott McIvor

9. Integrating Viral Vectors for Gene Modifications 163
   Gemma L. Mendel, Brian Paszkiet, and Rafal P. Witek

10. Bacteriophage Integrases for Site-Specific Integration 199
    Bhaskar Thyagarajan

11. Improving Gene Targeting Efficiency in Human Pluripotent Stem Cells 211
    Sangyoon Han, Anna McCann, Louise C. Laurent, Jeanne F. Loring, and Ying Liu

PART IV: APPLICATIONS 227

12. Modified Stem Cells as Disease Models and in Toxicology Screening 229
    Catharina Ellerström, Peter Sartipy, Raimund Strehl, and Johan Hyllner

13. Screening and Drug Discovery 251
    Elizabeth A. Davenport and Robert S. Ames

INDEX 273
