## Index

above-threshold bias condition, 78, 97, 106  
absolute temperature, 74  
absorption coefficient, 119, 125  
absorption rate, 53  
absorption region, 125  
active layer, 35  
active region, 35  
active tuning, 30  
ambient temperature, 79  
analytical method, 105  
atom energy, 11  
average avalanche multiplication, 132

band gap, 11, 117  
bandwidth, 121  
based-collector junction capacitance, 220  
based-emitter junction capacitance, 220  
bit error ratio, 234  
Boltzmann's constant, 66  
built-in potential, 79  
buried heterostructure, 18

capacitance-voltage characteristics, 138  
capacitive peaking technique, 225, 277  
carrier density, 26, 42  
carrier transport, 41, 166  
cascade feedback amplifier, 265  
channel length modulation parameter, 158  
channel resistance, 153  
charge storage, 66  
charge storage capacitance, 142  
chirping, 44  
compound-semiconductor-based device, 149  
conduction band, 11  
contact resistance, 77  
coplanar waveguide, 204  
correlated current noise sources, 171  
cross spectral intensity, 73  
Curtice-cubic model, 160  
cutoff bias condition, 179  
dark current, 119, 140  
Darlington feedback amplifier, 263  
DC model parameters, 174  
de-embedding, 78, 98  
depletion region, 119  
depletion width, 124  
depletion-layer capacitance, 142  
differential feedback amplifier, 265  
diffusion capacitance, 70  
direct modulation, 190  
direct-coupled FET logic, 200  
distortion measurement, 57  
distributed amplifier, 222  
distributed Bragg reflector, 29  
distributed feedback laser, 27  
double heterojunction, 17  
drain channel current noise, 161  
drain pad capacitance, 153
drain-bulk junction, 178
drain-to-source capacitance, 153
driver circuit, 199
dynamic range, 241
dynamic resistance, 97
electrical signal, 114
electro-absorption modulator, 190
electron density, 35
electron mobility, 150
electron-hole pair, 39, 114
electronic field, 115
electronic part, 79
emitter coupled logic, 200
empirical equivalent circuit model, 138
calculated energy band, 11
equilibrium electron density, 37
equivalent circuit model, 63
equivalent input circuit current, 247–248
equivalent noise temperature, 164
external modulation, 191
extinction ratio, 239
eye diagram, 238

Fabry-Perot cavity lasers, 20
fall time, 239
FET modeling technique, 151
fiber-optic links, 1
finite-difference form, 137
flat-band voltage, 136
forward-bias, 79
Fourier transform, 77
frequency chirp, 46
frequency modulation, 34, 44
front-end circuit design, 243

gain compression factor, 37, 65
gain slope coefficient, 65
gain-guided, 18
gap capacitance, 138
gap voltage, 137
gate induced noise current, 161
gate pad capacitance, 153
gate-to-drain capacitance, 153
gate-to-source capacitance, 153
gateway state, 76
grounded electrode, 137
harmonic balance, 155
harmonic distortion, 48
HBT modeling, 165
HEMT, 151
heterojunction, 15
high impedance front-end, 245
hole mobility, 129
homojunction, 15
hybrid optoelectronic integrated circuits, 197, 244
incident light power, 116
index guiding, 18
inductive peaking technique, 226, 274
input logic swing, 209
input reflection coefficient, 95
insertion loss, 192
intensity modulation direct-detection, 46
interdigitated electrode, 135
intermodulation distortion, 56
intrinsic region, 124
inverter circuit, 268
ionization layer, 131
junction capacitance, 127
knee voltage, 217
Langevin noise, 52
large signal model, 65, 168
large signal transit response, 46
large-signal circuit model, 65
large-signal modulation, 46
laser driver, 199
lateral planar geometry, 135
level shift circuit, 206
linear model, 168
linewidth enhancement factor, 44
Mach–Zehnder, 190
matching network, 202
measurement procedure, 103
measurement technique, 55
MESFET, 152
microsolder bump bonding, 197
microstrip test fixture, 103
microwave modeling technique, 114
millimeter-wave, 1
modulation response, 48
modulator driver, 205
monolithic optoelectronic integrated
circuit, 195, 224
MOSFET, 176
MSM PD, 134
multi quantum well, 24
multimode fiber, 3
multimode rate equations, 38
multiplexer, 188
multiplication noise, 130
multiplication region, 132
noise bandwidth, 52
noise correlation matrix technique, 165
noise current source, 73
noise effective bandwidth, 235
noise figure, 252
noise measurement technique, 55
noise model, 161, 163, 170, 181
noise performance, 52
nonlinear equivalent circuit
model, 76
nonradiative recombination, 39
non-return-to-zero, 189
normalization constant, 66
normalized small signal modulation
response, 96
one-level, 76
on/off aspect ratio, 93
open test structure, 153
operating wavelength, 44
optical cavity, 14, 33
optical communication system, 1
optical confinement factor, 37
optical external modulator, 191
optical fiber, 3–4
optical modulation, 190
optical receiver, 234
optical transmitter, 188
parameter extraction method, 95, 171, 181
parasitic effects, 95
parasitic element, 79
passive peaking technique, 224, 274
passive tuning, 31
phase tuning, 31
photocurrent, 127
photo-generated carrier, 122
photon density, 36
photon lifetime, 35
PIN PD, 124
PI-type model, 168
population distribution, 12
population inversion, 14
positive electrode, 137
positive feedback, 14
Pospieszalski noise model, 163
power dissipation, 210
Pucel noise model, 161
quantum efficiency, 66, 116
quantum well lasers, 22
radio frequency, 1
rate equation, 35
reach-through voltage, 138
receiver sensitivity, 238
relationship, 156
relative intensity noise, 51, 72
relaxation oscillation, 48
responsivity, 116
return-to-zero, 198
reverse-bias, 115
ridge-waveguide laser, 64
rise time, 47, 117, 239
room temperature, 67
saturation drift velocity, 137
saturation voltage parameter, 209
Schottky barrier, 136
Schottky contact, 136
second-order harmonic distortion, 48
