LIST OF CONTRIBUTORS xv

PREFACE xix

1 Introduction: Basic Concepts and a Brief History of Organic Redox Systems 1
   Tohru Nishinaga
   1.1 Redox Reaction of Organic Molecules, 1
   1.2 Redox Potential in Nonaqueous Solvents, 3
   1.3 A Brief History of Organic Redox Compounds, 5
   References, 10

2 Redox-Mediated Reversible σ-Bond Formation/Cleavage 13
   Takanori Suzuki, Hitomi Tamaoki, Jun-ichi Nishida, Hiroki Higuchi,
   Tomohiro Iwai, Yusuke Ishigaki, Keisuke Hanada, Ryo Katoono,
   Hidetoshi Kawai, Kenshu Fujiwara and Takanori Fukushima
   2.1 Dynamic Redox (“Dyrex”) Systems, 13
       2.1.1 π-Electron Systems Exhibiting Drastic Structural Changes upon Electron Transfer, 13
       2.1.2 Redox Switching of a σ-Bond upon Electron Transfer, 16
       2.1.3 Two Types of Dyrex Systems Exhibiting Redox Switching of a σ-Bond, 17
   2.2 Advanced Electrochromic Response of “Endo”-Type Dyrex Systems Exhibiting Redox Switching of a σ-Bond, 19
2.2.1 Tetraaryldihydrophenanthrenes as Prototypes of “Endo”-Dyrex Systems, 19
2.2.2 Tricolor Electrochromism with Hysteretic Color Change in Non-C2-Symmetric “Endo”-Dyrex Pair, 20
2.2.3 Electrochromism with Chiroptical Output of Chiral “Endo”-Dyrex Pair, 21
2.2.4 Multi-Output Response System Based on Electrochromic “Endo”-Dyrex Pair, 24

2.3 Advanced Electrochromic Response of “Exo”-Type Dyrex Systems Exhibiting Redox Switching of a σ-Bond, 26
2.3.1 Bis(diarylethenyl)biphenyls as Prototypes of “Exo”-Dyrex Systems, 26
2.3.2 Electrochromism with Chiroptical Output of Chiral “Exo”-Dyrex Systems, 26
2.3.3 Electrochromism of “Exo”-Dyrex Systems in Aqueous Media, 28

2.4 Prospect: Redox Systems With Multiple Dyrex Units, 31
References, 33

3 Redox-Controlled Intramolecular Motions Triggered by π-Dimerization and Pimerization Processes
Christophe Kahlfuss, Eric Saint-Aman and Christophe Bucher

3.1 Introduction, 39
3.2 Oligothiophenes, 40
3.3 Phenothiazine, 44
3.4 Naphthalene and Perylene Bisimides, 45
3.5 para-Phenylenediamine, 47
3.6 Pyridinyl Radicals, 49
3.7 Viologen Derivatives, 50
3.8 Verdazyl, 60
3.9 Phenalenyl, 60
3.10 Porphyrins, 61
3.11 Benzenoid, 62
3.12 Cyclophane, 64
3.13 Tetrathiafulvalene, 68
3.14 Conclusion, 80
Acknowledgments, 80
References, 81

4 Tetrathiafulvalene: A Redox Unit for Functional Materials and a Building Block for Supramolecular Self-Assembly
Masashi Hasegawa and Masahiko Iyoda

4.1 Introduction: Past and Present of TTF Chemistry, 89
4.2 Basic Redox Properties of TTF and Stacked TTF, 90
4.2.1 Monomeric TTFs, 90
4.2.2 Interactions in Stacked TTF Dimer, 92
4.2.3 Interactions in Stacked TTF Oligomers, 97
4.2.4 Head-to-Tail TTF Dimer, 98
4.3 TTF as a Faithful Redox Active Unit in Functional Materials, 100
  4.3.1 Electrochromic Materials, 100
  4.3.2 Optically Active TTFs, 102
  4.3.3 Uses as Positive Electrode Materials for Rechargeable Batteries, 108
4.4 Electroconductive Properties of TTF Derivatives Based on Supramolecular Self-Assembly, 112
  4.4.1 Redox-Active Nanostructure Formation in the Solid State, 113
  4.4.2 Conducting Nanostructure Formation, 115
  4.4.3 Conducting Nanofibers by Iodine Doping, 116
  4.4.4 Conducting Nanofibers Based on Cation Radicals, 120
  4.4.5 Conducting Nanowires of Neutral TTF Derivatives, 123
4.5 Summary and Outlook, 124
References, 125

5 Robust Aromatic Cation Radicals as Redox Tunable Oxidants 131
Marat R. Talipov and Rajendra Rathore

5.1 Introduction, 131
5.2 Designing Molecules for the Formation of Stable Cation Radicals (CRs)—A Case Study, 135
  5.2.1 Exploring the Cause of Exceptional Stability of THT-Orange⁺⁺, 137
5.3 Methods of Preparative Isolation of Aromatic Cation Radicals, 142
  5.3.1 Nitrosonium (NO⁺) Salts, 143
  5.3.2 Antimony Pentachloride (SbCl₅), 144
  5.3.3 Triethylxonium Hexachloroantimonate (Et₃O⁺ SbCl₆⁻), 148
  5.3.4 DDQ and HBF₄-Ether Complex, 149
5.4 Quantitative Oxidation of Electron Donors Using THT-Orange⁺⁺ SbCl₆⁻ as One-Electron Oxidant, 150
  5.4.1 Analysis of Two-Electron Oxidation Processes Using MF/D Plots, 157
5.5 Readily Available Electron Donors for the Redox-Tunable Aromatic Oxidants, 164
  5.5.1 Triptycene Based Electron Donors, 164
  5.5.2 Tetrabenzodifurans, 166
  5.5.3 Polyaromatic Hydrocarbons, 168
  5.5.4 Multi-Electron Redox Systems, 168
5.6 Conclusion, 171
References, 173
6 Air-Stable Redox-Active Neutral Radicals: Topological Symmetry Control of Electronic-Spin, Multicentered Chemical Bonding, and Organic Battery Application

Shinsuke Nishida and Yasushi Morita

6.1 Introduction, 177
6.2 Open-Shell Graphene Fragment: Design and Synthesis of Air-Stable Carbon-Centered Neutral Radicals Based on Fused-Polycyclic π-System, 179
6.3 Topological Symmetry Control of Electronic-Spin Density Distribution by Redox and other External Stimuli, 181
   6.3.1 Redox-Based Spin Diversity of Oxophenalenoxyl Systems, 181
   6.3.2 Spin-Center Transfer and Solvato-/Thermochromism of Tetrathiafulvalene-Substituted 6-Oxophenalenoxyl Neutral Radical, 183
6.4 Control of Electronic-Spin Structure and Optical Properties of Multicentered C–C Bonds, 184
   6.4.1 Strong SOMO–SOMO Interaction within π-Dimeric Structure of Phenalenyl Derivatives, 184
   6.4.2 Thermochromism Induced by Thermal Equilibrium of π-Dimeric Structure and σ-Dimeric Structure, 188
   6.4.3 Weak SOMO–SOMO Interactions by Molecular Modification of Phenalenyl System, 190
   6.4.4 Multidimensional Spin–Spin Interaction and π-Staked Radical Polymer, 193
6.5 Rechargeable Batteries Using Organic Electrode-Active Materials, 195
   6.5.1 Closed-Shell Organic Molecules as Electrode-Active Materials, 196
   6.5.2 Closed-Shell Organic Polymers, 214
   6.5.3 Stable Organic Neutral Radicals, 218
   6.5.4 Stable Organic Neutral Radical Polymers, 220
6.6 Molecular Spin Batteries: Design Criteria and Performance of High Capacity Organic Rechargeable Battery Materials, 223
   6.6.1 Molecular Crystalline Secondary Batteries, 223
   6.6.2 Trioxotriangulene Neutral Radical (TOT) Derivatives, 224
   6.6.3 Molecular Spin Batteries, 227
6.7 Conclusion, 229
Acknowledgement, 231
References, 231

7 Triarylamine-Based Organic Mixed-Valence Compounds: The Role of the Bridge

Christoph Lambert

7.1 Introduction, 245
7.2 The MV Concept, 246
7.3 The Redox Center, 250
7.4 The Bridge, 251
7.5 The Length of the Bridge, 254
7.6 Changing the Connectivity, 256
7.7 Twisting the Bridge, 258
7.8 Saturated vs Unsaturated Bridge, 258
7.9 Meta vs Para Conjugation, 260
7.10 Switching the Bridge, 262
7.11 Metal Atoms as the Bridge, 263
7.12 And Finally: Without a Bridge, 264
Acknowledgment, 265
References, 265

8 Magnetic Properties of Multiradicals Based on Triarylamine Radical Cations 269
Shuichi Suzuki and Keiji Okada
8.1 Introduction, 269
8.2 Triarylamine Radical Cations as Synthetic Reagents for Preparation of Donor Radical Cations with Various Counter Anions, 270
8.2.1 Syntheses of TBPA⁺·PF₆⁻ and Its Counteranion Analouges, 270
8.3 Stable Triarylamines without para-Substituents, 270
8.4 Models of Intermolecular Exchange Interaction in Heteroatomic Systems, 271
8.4.1 Dynamic Spin Polarization Model and Disjoint–Nondisjoint Model, 271
8.4.2 Dynamic Spin Polarization and Spin Delocalization, 272
8.4.3 Effect of Large Dihedral Angle between Spacer and Spin Source, 273
8.4.4 p-Phenylene Methodology or π-Conjugation Using Topologically Different Spin Sources, 275
8.5 Magnetic Susceptibility and Temperature Dependence, 275
8.6 Poly(Diarylamino benzene) Poly(Radical Cation)s, 276
8.7 Radical Substituted Triarylamines, 278
8.7.1 tBuNO-Substituted Triarylamines, 278
8.7.2 NN-Substituted Triarylamines, 279
8.8 Towards Further Developments, 282
References, 283

9 Open-Shell π-Conjugated Hydrocarbons 287
Takashi Kubo
9.1 Introduction, 287
9.2 Monoradicals, 288
9.2.1 Triphenylmethyl, 288
9.2.2 Phenalenyl, 289
9.2.3 Cyclopentadienyl, Indenyl, Fluorenyl, 291
9.2.4 Cycloheptatrienyl, 293
9.2.5 BDPA, 294
9.2.6 Dinaphthofluorenyl, 294

9.3 Biradicals, 295
9.3.1 Triplet Biradicals, 295
9.3.2 Singlet Biradicals: Quinodimethanes, 296
9.3.3 Singlet Biradicals: Bisphenalenyl System, 298
9.3.4 Singlet Biradicals: Acences, 300
9.3.5 Singlet Biradicals: Anthenes, 301
9.3.6 Singlet Biradicals: Zethrenes, 303
9.3.7 Singlet Biradicals: Indenofluorenies, 304

9.4 Polyradicals, 304

References, 305

10 Indenofluorenies and Related Structures 311
Jonathan L. Marshall and Michael M. Haley

10.1 Introduction, 311
10.2 Indeno[1,2-a]fluorenes, 313
  10.2.1 Indeno[1,2-a]fluorene-7,12-dione, 313
  10.2.2 Truxenone, An Indeno[1,2-a]fluorene Related Structure, 314
10.3 Indeno[1,2-b]fluorenes, 320
  10.3.1 Indeno[1,2-b]fluorene-6,12-diones, 320
  10.3.2 Dicyanomethylene Indeno[1,2-b]fluorenes, 325
  10.3.3 Fully Conjugated Indeno[1,2-b]fluorenes, 327
10.4 Indeno[2,1-a]fluorenes, 333
10.5 Indeno[2,1-b]fluorenes, 336
10.6 Indeno[2,1-c]fluorenes, 339
  10.6.1 Indenofluorene-Related Structures, 341
10.7 Fluorenol[4,3-c]fluorene, 342
10.8 Indacenedithiophenes, 345
  10.8.1 Indacenedithiophene Diones, 345
  10.8.2 Tetrathiofulvalene and Dicyanomethylene Indacenedithiophenes, 347
  10.8.3 Fully Conjugated Indacenedithiophenes, 349
10.9 Diindeno[n]thiophenes, 351
10.10 Conclusions, 354
Acknowledgment, 354
References, 354

11 Thienoacenes 359
Kazuo Takimiya

11.1 Introduction, 359
11.2 Synthesis of Thienoacenes via Thienannulation, 361
11.2.1 BDT and ADT Derivatives, 361
11.2.2 Thienannulation to Construct Thienoacenes with Terminal Thiophene Ring(s), 362
11.2.3 Thienannulation to Construct Thienoacenes with Internal Thiophene Ring(s), 366
11.3 Molecular Electronic Structures, 370
11.4 Application to Electronic Devices, 373
  11.4.1 Molecular Organic Semiconductors for $p$-Type OFET Devices, 373
  11.4.2 Semiconducting Polymers for PSCs, 377
11.5 Summary, 379
References, 379

12 Cationic Oligothiophenes: $p$-Doped Polythiophene Models and Applications 383

Tohru Nishinaga

12.1 Introduction, 383
12.2 Design Principle and Synthetic Methods, 384
12.3 Electrochemistry, 390
12.4 Structural and Spectroscopic Properties as $p$-Doped Polythiophene Models, 397
12.5 Application to Supramolecular Systems, 403
12.6 Conclusion and Outlook, 406
References, 406

13 Electron-Deficient Conjugated Heteroaromatics 411

Yutaka Ie and Yoshio Aso

13.1 Introduction, 411
13.2 Hexafluorocyclopenta[c]thiophene and its Containing Oligothiophenes, 412
13.3 Difluoromethylene-Bridged Bithiophene and its Containing Oligothiophenes, 416
13.4 $\pi$-Conjugated Systems Having Thiazole-Based Carbonyl-Bridged Compounds, 419
13.5 Difluorodioxocyclopentene-Annelated Thiophene and its Containing Oligothiophenes, 427
13.6 Dioxocycloalkene-Annelated Thiophene and its Containing Oligothiophenes, 433
13.7 Dicyanomethylene-Substituted Cyclopenta[b]thiophene and its Containing $\pi$-Conjugated System, 434
13.8 Electron-Deficient $\pi$-Conjugated System Containing Dicyanomethylene-Substituted Cyclopenta[b]thiophene Toward Organic Photovoltaics, 437
13.9 Conclusion, 440
References, 441
14 Oligofurans 445
   Ori Gidron
   14.1 Background, 445
   14.2 Synthesis and Reactivity, 446
   14.3 Properties of Oligofurans in the Neutral State, 449
   14.4 Properties of Cationic Oligofurans, 452
   14.5 Polyyurans, 454
   14.6 Devices with Furan-Containing Materials, 455
   14.7 Summary and Outlook, 459
   References, 459

15 Oligopyrroles and Related Compounds 463
   Masayoshi Takase
   15.1 Introduction, 463
   15.2 Linear Oligopyrroles, 464
      15.2.1 Synthesis, 464
      15.2.2 Optical and Redox Properties, 465
      15.2.3 π-Dimer of Oligopyrrole Radical Cations, 466
   15.3 Cyclic Oligopyrroles, 467
      15.3.1 Synthesis, 468
      15.3.2 Optical and Redox Properties, 469
   15.4 Pyrrole-Fused Azacoronenes, 469
      15.4.1 Synthesis, 470
      15.4.2 Optical and Redox Properties, 470
      15.4.3 Aromaticity, 473
   15.5 Conclusions, 474
   References, 474

16 Phospholes and Related Compounds: Syntheses, Redox Properties, and Applications to Organic Electronic Devices 477
   Yoshihiro Matano
   16.1 Introduction, 477
   16.2 Synthesis of π-Conjugated Phosphole Derivatives, 478
   16.3 Redox Potentials of Phosphole Derivatives, 483
   16.4 Electrochemical Behaviors of Phosphole Derivatives, 493
   16.5 Applications of Phosphole-Based Materials to Organic Electronic Devices, 495
   References, 497

17 Electrochemical Behavior and Redox Chemistry of Boroles 503
   Holger Braunschweig and Ivo Krummenacher
   17.1 Introduction, 503
   17.2 Preparation, 505
   17.3 Chemical Reactivity, 507
      17.3.1 Lewis Acid–Base Adducts, 507
CONTENTS

17.3.2 Cycloaddition Reactions, 508
17.3.3 σ-Bond Activation Reactions, 509
17.4 Redox Chemistry, 510
17.4.1 Electrochemistry, 510
17.4.2 Preparative Reduction Chemistry, 514
17.5 Conclusions and Outlook, 518
References, 519

18 Isolation and Crystallization of Radical Cations by Weakly Coordinating Anions
Xinping Wang

18.1 Introduction, 523
18.2 Radical Cations and Dications Based on Triarylamines, 524
18.3 Radical Cations Containing Phosphorus, 528
18.4 The Radical Cation Containing a Selenium–Selenium Three-Electron σ-Bond, 534
18.5 Radical Cations of Organic Oligomers (π-Dimerization), 536
18.6 σ-Dimerization of Radical Cations, 540
18.7 Conclusion, 541
References, 542

19 Heavier Group 14 Element Redox Systems
Vladimir Ya. Lee and Akira Sekiguchi

19.1 Introduction, 545
19.2 Redox Systems of the Heavier Group 14 Elements E (E=Si–Pb), 547
19.2.1 Interconversion between Cations R₃E⁺, Radicals R₃E·, and Anions R₃E⁻, 547
19.2.2 Anion and Cation-Radicals of the Heavy Analogs of Carbenes R₂E:, 552
19.2.3 Anion- and Cation-Radicals of the Heavy Analogs of Alkenes R₂E=ER, and Heavy Analogs of Alkynes R−E=E−R, 555
19.3 Summary, 559
References, 559

20 π-Electron Redox Systems of Heavier Group 15 Elements
Takahiro Sasamori, Norihiro Tokitoh and Rainer Streubel

20.1 Introduction, 563
20.2 The Redox Behavior of Dipnictenes, 564
20.3 The Redox Behavior of π-Conjugated Systems of Heavier Dipnictenes, 571
20.4 The Redox Behavior of d–π Electron Systems Containing Heavier Dipnictenes, 572
20.5 Conclusion, 575
References, 575
