## Contents

Preface ix

**PART 1 ANALYSIS**

1 The Framework for Understanding 3
   - Process and knowledge 3
   - The initial suggestion 4
   - Carrying out the evaluation 4
   - Physical and social context 5
   - The basis of analysis 6
   - Knowledge needed for choice 7
   - Summary 8

2 Building Purpose and Performance 9
   - Activities, space and construction 9
   - Introduction to performance requirements 9
   - Environmental impact and sustainability 17
   - Summary 17

3 Common Forms – Specific Solutions 18
   - General and constructed forms 18
   - The emergence of general building forms 18
   - Uncertainty and risk 22
   - Summary 23

4 Construction Variables 24
   - The variables of construction – the outcome of choice 24
   - Choosing materials 25
   - Choosing shape 27
   - Choosing size 27
   - Spatial relationships 32
   - Joints and fixings 32
   - Summary 35

5 Defining Conditions 37
   - Physical and social conditions 37
   - Activity and construction-modifying environments 38
   - The dynamics of the system 38
   - Choice of interior elements of the building 42
   - Inside the construction itself 42
   - Summary 43

6 The Resource Base 44
   - Introduction 44
   - Materials – the primary resource 44
   - Knowledge and skill – the human resource 45
   - Production equipment – the technological resource 46
   - Money – the enabling resource 47
   - Summary 48

7 Design Concept 49
   - Linking design to construction choice – flows and transfers 49
   - Concept design – broad options 50
   - Physical performance and appearance – commodity, firmness and delight 50
   - Function of the whole, function of the parts 51
   - Summary 52

8 Appearance 53
   - Visualising attributes and response 53
   - Space and context 53
   - Physical space for the construction 55
   - The approach to analysis 56
   - Summary 56

9 Analysis of Physical Behaviour 57
   - Visualising conditions and response 57
   - Function and performance – a technical aim 57
   - Preventing failure – a technical objective 57
   - The role of observation and science in the analysis 58
   - The approach to analysis 59
   - Summary 59

10 Physical Behaviour Creating Environments 60
    - Aspects of environment 60
    - The building as a system 60
    - The dry environment 65
    - The warm environment 72
    - The light environment 78
    - The acoustic environment 82
    - The clean environment 86
    - The safe environment 88
    - The private environment 96
    - Summary 97
### Contents

#### 11 Physical Behaviour Under Load
- Forces, external and internal 98
- Basic structural members 100
- Curving (and folding) structural members 104
- Structural connections 105
- Grid members – pin-jointed frames 107
- Building structures – wind stability 108
- Stress–strain and the choice of material 110
- Structural analysis and design 111
- Movements and structural behaviour 112
- Stresses in the ground 112
- The major structural forms 114
- Summary 117

#### 12 Physical Behaviour Over Time
- Reliability: renewal, maintenance, repair and disposal 119
- Basis of analysis 120
- Soiling and cleaning 120
- Durability of materials 121
- Movements in components 124
- Ground movement, settlement and subsidence 127
- Movement and detailing 128
- Wear of components 129
- Summary 129

#### 13 Manufacture and Assembly
- Realisation of performance 130
- Visualising stages and sequence 130
- Analysis of operations, methods and resources 133
- Materials and labour 135
- Production equipment 136
- Production options 141
- Knowledge and expertise for the analysis of the process 148
- Summary 149

#### 14 Cost
- Cost and value 150
- Cost and price 151
- Cost and time frames 151
- Cost and cost data 152
- Summary 154

#### 15 Sustainability – Social Concern
- Two major forces 155
- Sustainability 156
- Established influences and new concerns 156
- Responding to the sustainability agenda 158

- Buildings as systems 161
- Renewable energy sources 168
- Water and waste 170
- Materials choice and detailing 172
- Planning and design concepts 173
- Emerging technologies 173
- Summary 174

#### PART 2 CHOICE – HOUSE CONSTRUCTION

#### 16 Applying the Framework to Housing
- The need for an integrated approach 179
- The basis of the case study 180
- Summary 182

#### 17 Floors
- Upper floors 183
- General forms for upper floors 183
- Timber-joisted upper floors 184
- Ground floors 191
- Suspended ground floors 192
- Ground-supported slab floors 195
- Services and other elements 197
- Site influences on choice of ground floors 197
- Production operations for ground floors 198
- The final choice 199
- Summary 199

#### 18 Roofs
- Pitch and span 201
- Other functions 201
- Pitched roofs 202
- Flat roofs 218
- Summary 219

#### 19 Walls
- Wall types by function 221
- General forms 221
- Walls in the case study 224
- Masonry cavity external walls 224
- Openings in the external wall 233
- Doors and windows – the components in the openings 236
- The panel frame option 238
- Party (separating) walls 241
- Partition walls 242
- Summary 243

#### 20 Foundations
- Basic function 244
- Site investigation 246
