nanopropeller 35
nano-replicas, common mechanical devices 272
nanoscale machines 1
nanoscale magnets 2
nano-symmetry 84
nanotechnology 1, 9, 13, 257
－ viable complex 2
nanotransistors 36–37
nanotube
－ capacitance per unit length 294
－ diameter dependent on chiral coefficients 295
－ effective spring constant for length L, clamped at each end 288, 289
－ electric current density 295
－ resonant frequency for section of length L, clamped at each end 295
－ Young’s modulus 295
nanotube based FET 143
nanotube, carbon 141–144, 262
－ armchair 142–143
－ ballistic 293
－ chiral 142
－ multi-walled 141
－ single-walled 141–143
nanowire 3, 144–145, 169
－ CdS 144
－ silicon 144–145
－ silicon, coated with oxide 145
nanowires of indium phosphide 71, 72
naphthalene 140
nearest neighbors 122
negative resistance range 10, 110
negative slope 9
NEMS (Nano-electromechanical Systems) 36, 161
nerve impulses 37
index

nested carbon nanotubes 24
neuron 37
neutral density filters 15–16
neutron generation by pyroelectric
  field-ionizing device
  – measurement of 100 keV x-ray emission 130
  – measurement of ion-current 130
  – measurement of neutron rate 130
neutron generator
  – based on pyroelectric crystal 128
  – field-ionizing 128
Newton’s laws of motion 14, 17
nodes 61, 268
normalization constant 64
NPN transistor 156
N-type semiconductor 107
nuclear spin 175
  – isolation 185
  – orientation 186
nucleon, magnetic moment 187
nucleotides 43
nucleus of the atom 52
nudge the atoms 40

p
parallel plate capacitor 21
partially covalent 88
partially ionic 88
particle
  – associated wave property 51
  – barrier penetration of 51
particle of light 27
passivation 124
patents
  – on DNA and RNA 282
  – on “life” 282
patterning 154
Pauli exclusion principle 76, 81, 97, 98, 106
pentagonal carbon ring 140
Pentium chip 8
period of pendulum oscillator 17
periodic arrangement, charged
  ions 97
periodic nature of the potential 102
periodic structure 6
periodicity 6, 110
Permalloy 80
permanent electric dipole moment 88
permeability, magnetic 194, 199
petallop computer 165
  – operating cost 165
  – power 165
phase velocity 56
phenomena of nanophysics 271
photoelectric effect 288
photoelectrons 28
photoemission 288
photographic development 16
photographic emulsion 146
photolithography 154, 173–174, 293
  – intrinsically planar 42
photoluminescence 72
photons 27–28, 59–60, 288
  – energy 288
photoresist 44
photoresist polymer 154
physical constraints polymer 66
physical laws
  – classical 2
  – quantum-mechanical 2
physical requirements on wave function 63
piezoelectric 126, 167–168
piezoelectric material
  – coefficient relating strain (distortion) to
    electric field 126
  – example PZT, lead zirconate-titanate 126

o
octane 139–140, 292
off-axis electron hologram 148
Ohmic contacts, Silicon 125
one-dimensional box 289
one-electron atoms 74
one-electron wave functions 75
open channel 2
optical cavity mode viewed as simple
  harmonic oscillator 118
optical fiber 59–60
optical lithography 158
optical spectra 52
optical tweezers 43–45
optically trapped structures 45
orbital angular momentum quantum number
  75
orbital wave functions 87
order parameter, of coherent distortion
  126, 127
orders of magnitude 4
organic chemistry 138
organic molecules, bonded 87
oscillations of conductance $\frac{di}{dv}$ vs gate
  – voltage 225, 226
  – influence of nanotube length, relate to
    Fermi velocity 226
  – slight irregularity of 225
index

- relation to operation of scanning probe microscope 126
- use as transducer to produce sound wave 127
piezoresistance 169
pitch of nanotube 143–144
Planck’s constant 10, 18, 27, 52, 288
plant cost, microelectronic 9
plasma 155
plasma formation in collapsing bubble 133, 134
PMMA polymer film 173
PN junction in semiconductor 116–117
- action as injection laser 116–117
- capacitance of junction, dependent on voltage 117
- current-voltage relation 116
- diffusion current of minority carriers 117
- thermionic current 116
- width of depletion region 116
PN junction injection laser 118–119
- critical current density, formula 119
- optical cavity 118
- reflection coefficient of cleaved semiconductor 118
- relation to nature of bandgap, as direct vs indirect 119
- single-nanowire, CdS 119–121
point contact gate design 220
polar molecules 89
polarization, P, of electron spins 199
polarization P of spins 79
polio virus 278
- as synthesized from “mail order” materials 281
polycarbonate 15
polycrystalline silicon (polysilicon) 155
polymethylmethacrylate (PMMA) 7
polystyrene 16
pore sizes 15
positive bias 111
post-human beings 283
posthuman future 277, 282
potassium channel 29
potential differences 38
potential energy 18, 52
potential step 65–67
power, needed for information technology 165
power absorption 287
power consumption, RSFQ technology 166
power density 21
principal quantum number 83
probability 55, 64, 291
probability cloud 75
probability density 55, 74
probability distribution 64, 73
production, profitable 1
projections, robotics/artificial intelligence 280
propeller 35
properties, of some common ferromagnets 125
proposed sleeve bearing 272
protein polymers 31
proteins, not present in nature 281
prototype “Molecular Assembler” 169–172
pulling, Au atoms 169
pulse
- $\pi$ 191
- $\pi/2$ 190
$P$-type semiconductor 107
pyroelectric 126
- example is lithium tantalate 129
pyroelectric neutron generator
- compact 128
- electric field near tungsten tip 129
- field-ionizing 128
- fusion of deuterons 129
- with release of energy and neutrons 130
$q$
quantization of angular momentum 51–53
quantized conductance 221
quantum computing 183–186
- algorithm advantage 237
- conceptual questions 237
- relation to encryption 237
quantum condition 53
quantum dot fluorescent 5
quantum dots (QDs) 3, 4, 10–11, 34, 54, 70
- coated 11
quantum interference of electrons in carbon nanotube FET 223–226
quantum limit 2
quantum mechanics 1
quantum nanophysics, probabilistic 2
quantum number n 18, 52, 74, 289
quantum of conductance 221
quantum rules 51
quantum sensitivity limit 16
quantum size effect 289
quantum states 61–74, 184
- linear combinations 184
quantum superposition, coherence 190–193
quantum system, two-level 185
quantum well structure 146
quantum wire 71
quarks 188
qubit 118, 188
  – charge 193
  – isolated double quantum dot 246
  – electron spin 190
  – information content 184
  – isolation 185
  – linear array 192
  – nuclear spin 191
  – reading value 185
  – susceptibility to decohere 184
repulsive interaction 86
repulsive overlap force 25
resistive electrical power 21
resistive time constant 21
resistivity 110
resistor 21
resonant frequency 161, 174, 260
resonant tunnel diode, as compared to single
electron transistor 231
resonant tunneling diode
  – action as “energy filter” 232
  – electron bound state 232
  – incorporation in transistor 232–233
  – tunnel barrier 232
resonant tunneling transistor (TBRTD)
  – bound state electron wave function 234
  – current voltage relation with
    multi-stability 232
  – double gated 233
  – energy bands 234
  – triple barrier, double well 233
response time of accelerometer 17
retina 2
Reynolds number 22
rigidity parameter 18
ripples of electron density 67
RNA 2
RNA polymerase engine 43, 96
RNAP engine 43
RNAP molecule 45
Roadmap 159, 162, 166
robotic technology 278–281
robotics 279
  – independent 280
  – willful 280
role of quantum dot in increasing radiative
efficiency 119
“room at the bottom” 4
rotary motors 30
rotation sensors 293
roughness of gas/liquid interface 134
RSFQ counting circuit 163
RSFQ technology 163–167
rules of nanophysics 83
sacrificial layers 160–162
saturation magnetic moment 123
saturation magnetization 122, 194
scale range 3, 8
scaling of gas temperature with bubble radius
  132, 133
scan, 3-d raster 187
scanning probe microscope 153
Scanning Tunneling Microscope (STM) 20, 38–41, 167–173
Schottky barrier 124, 125
Schrodinger’s equation 1, 58, 62–63, 73–74
– time-dependent 62, 63
sediment 149
Segway Human Transporter 293
self-assembled monolayers 149–150
self-assembly 42, 46–48, 138
self-consistency equation 123
self-replicating machines 1
self-replicating molecular assembler 154, 275
semiconductor 117
– carrier concentration in 112–115
– concentrations of electrons and holes 109
– degenerate 115, 116
– density of states 168
– effective mass of electron or hole 171
– electrical neutrality 113
– heavily doped 115
– metallic 116
– metallic doping, P⁺ or N⁺ 112
– minority carrier diffusion length 117
– minority carrier lifetime 117
– recombination of carriers 117
– valence band 113
semiconductor electronics 1
semiconductor QD crystal 11
servo loop 167
sharp absorption 10
shear modulus 20
shell structure, atoms 83
Si 106
silicon carbide nanorods 142
silicon computer technology, future 162
silicon lithographic microtechnology 13
silicon nanoelectronics
– 45 nm photolithographic process 219
– wave optics (vs geometrical optics) in
  mask design 219
silicon nanowire 71
silicon technology 154–158
simple harmonic motion 21
simple harmonic oscillation (SHO) 17, 18, 72, 73
simple pendulum 17
simulations and approximate solutions 7
single electron transistor (SET) 4, 161
single magnetic domain 101, 148
single mode laser action 118
single molecules, as circuit elements 244
single molecules as computing elements 253
single-C₆₀ transistor (SET) 240
– fabrication by electromigration induced
  breaking of nanoelectrode 240
– I(V) curves vs gate voltage 240
– schematic diagram 240
single-crystal-silicon bars, vibrational
  motions 287
single-electron transistor (SET) 239–245
– analog of field effect transistor (FET) 239
– as compared to resonant tunnel diode
  243
– fabrication from single nanotube 241
– half-integer electron charge of island 239
– localization of charge by tunnel barrier
  239
– room-temperature operation 241
– twice-kinked nanotube 241
– use of C₆₀ molecule as island 239, 240
single-nanowire injection laser 119
single-point probes 167
skyscrapers 3
Smalley’s refutation 272–274
smallness, limits to 27–48
sonoluminescence 132
soot 16
sophisticated robots 280
source contact 143
sources of GHz radiation 4
sp bond, angle 139
space part of wave function 85
space wave functions 86
spasmoneme 29
spasmoneme spring 29
spatial resolution 167, 293
spectrum of glowing light 286
speed of light 10, 62
speed of sound v 18
spherical polar coordinates 73
spin alignment 121
spin echo 191
spin flip length in carbon nanotube 196
spin flip scattering
– length 196
– time 196
spin injection 203
spin injection device 204
spin injection in carbon nanotube 203, 209
spin part of wave function 85–86
spin quantum number 76
spin singlet 86, 87
spin triplet 85, 87
spin valve 194
spin-down electrons 124
spins, coupled set 189
spin-up electrons 124
splitting, hyperfine 188
spring constant 286
spring motor 30
sputtering 156, 157
square well potential 289
stability (constancy) of concepts of solid state physics under scaling 6
stained glass windows 15
standing waves 67, 98, 105
star-stuff 137
Stern–Gerlach experiment 183, 186–187
stimulated emission of photon 145
STM 167
STM as quantum computer readout 191
STM current, modulation by spin precession 192–193
stochastic diffusive (Brownian) motion 23
Stokes’ Law 22–23, 28
strain 21
strained crystalline layer 146
strained InGaAs quantum-well structure 145
string, stretched 18
strong wave effects with long electron mean free path 220
stubbed quantum electron wave guide 222–223
stubbed quantum electron wave guide device
– conductance plateaus 222
– four-electrode gate 223
– sharp interference minima 223
sub-band index 71
succeeding conformations 139
superconducting double qubit
– capacitive coupler 250
– demonstration of charge oscillations 251
– schematic of device (Cooper pair boxes) 250
– splittings reveal coupling of qubits 250
superconducting ground state, of electron pairs 85
superconducting logic elements rapid single flux quantum (rsfq) 214–217
– voltage pulse 215
superconducting quantum interference
– detector (squid) 210
– DNA molecule attachment 212, 213
– DNA-templated 212, 213
– nanoscale version 212, 213
superconductive RSFQ computing technology 163
superconductor
– electron pair wave function 207
– macroscopic quantum state 206–207
– magnetic flux quantum 206
– pair wave-function phase 0 207
– penetration depth 207
– type I 207
– type II 207
super-human beings 282–284
supernova explosions 137, 138
superparamagnetic limit 13, 123, 124
superpositions 98
surface, non-commensurate 274
suspended bridges 160–162
suspended silicon plate 160
SWNT 142
symmetric 84, 85
symmetric covalent bond 84
symmetric exchange 85
symmetry, exchange of particles 185
symmetry of the wave function 121
symmetry-driven electrostatic force 84
synthesis 144
– of polio virus 279
– silicon nanowire, via laser assisted catalytic growth 142, 144
– use of laser ablation 142, 144
Synthetic biology 281–282
– proteins not present in nature 281
– unconventional amino acids 281
– use of E. coli to produce artemisinin, anti-malaria drug 281
